Sacramento, CA 95814

- Acknowledgments 1-14
- 1 Introduction..... 1-1
 - 1.1 SACSIM Version 1-1
 - 1.2 Version History 1-4
 - 1.3 Public Access 1-4
 - 1.4 Organization of the Report 1-5
 - 1.4.1 Chapter 1 Introduction 1-5
 - 1.4.2 Chapter 2 Model Overview..... 1-5
 - 1.4.3 Chapter 3 Model Structure 1-5
 - 1.4.4 Chapters 4 and 5 Land Use and Demographics 1-5
 - 1.4.5 Chapters 6, 7, and 8 Transportation Networks 1-6
 - 1.4.6 Chapter 9 Auto/Transit Cost and Pricing 1-6
 - 1.4.7 Chapter 10 System Equilibration 1-6
 - 1.4.8 Chapter 11 Sensitivity Tests..... 1-7
 - 1.4.9 Chapter 12 Model Calibration, Validation and Reasonableness Check..... 1-7
- 2 Model Overview 2-1
 - 2.1 Key Concepts and Parameters 2-1
 - 2.2 Hardware and Software Requirements..... 2-4
 - 2.2.1 Hardware 2-4
 - 2.2.2 Software 2-5
 - 2.3 Model Inputs 2-7
 - 2.3.1 Scenario 2-7
 - 2.3.2 Input 2-8
 - 2.3.3 daysim..... 2-9
 - 2.4 Model Outputs 2-11
 - 2.5 Preparing a model run 2-12
 - 2.5.1 Model run scenario structure 2-12
 - 2.5.2 Setup for Model Run Pricing Parameters 2-14
 - 2.5.3 Start Scenario Model Run with Cube Voyager 2-17
- 3 Model Structure 3-1

- 3.1 DAYSIM - Person Day Activity-Based Tour Simulation 3-3
 - 3.1.1 DAYSIM Terminology and Concepts 3-3
 - 3.1.2 DAYSIM Structure and Flow..... 3-8
- 3.2 Commercial Vehicle Travel..... 3-26
- 3.3 External Travel 3-28
 - Trip Generation for I-X and X-I Travel..... 3-31
 - 3.3.1 Internal Trip Generation for External Work Travel Model 3-33
 - 3.3.2 Internal Trip Generation for External Non-Work Travel Model 3-34
 - 3.3.3 Internal Trip Generation for Commercial and Airport Passenger Trips..... 3-34
 - 3.3.4 Trip Distribution for I-X and X-I Travel 3-35
 - 3.3.5 Friction Factors and Deterrence for Work Trips 3-36
 - 3.3.6 Friction Factors and Deterrence for Non-Work Purposes 3-36
 - 3.3.7 Trip Distribution for I-X and X-I Commercial Vehicle and Airport Trips..... 3-37
 - 3.3.8 Mode Split and Time-of-Travel for I-X and X-I Travel 3-38
 - 3.3.9 Through Trips for X-X Travel 3-39
- 3.4 Airport Passenger Ground Access Model..... 3-40
 - 3.4.1 Introduction..... 3-40
 - 3.4.2 Trip Generation for Internal Passengers..... 3-42
 - 3.4.3 External Passenger Generation Rates from Population 3-42
 - 3.4.4 Enumeration of Passenger Survey Database..... 3-43
 - 3.4.5 Ground Access Mode Choice for Internal Passengers..... 3-44
 - 3.4.6 Updated Time-of-Day Distribution of Airport Access 3-47
- 3.5 Vehicle Trip Table..... 3-48
 - 3.5.1 Vehicle Trip Table Preparation and Assignment..... 3-48
 - 3.5.2 Trip Table Preparation 3-49
 - 3.5.3 Vehicle Trip Assignment 3-51
- 3.6 Transit Assignment..... 3-58
 - 3.6.1 Transit Path Building and Assignment 3-58
 - 3.6.2 Transit Background Network..... 3-58
 - 3.6.3 Transit System Coding Structure 3-59

3.6.4	Transit network	3-61
3.6.5	Routing	3-61
3.6.6	Transit Assignment	3-62
3.6.7	Drive Access to Transit	3-62
3.6.8	Park-and-Ride Lot Assignment	3-63
4	Land Use Data.....	4-1
4.1	Land Use for SACSIM Introduction.....	4-1
4.1.1	Terminology.....	4-1
4.2	Land Use Data Files	4-2
4.3	SACSIM Parcel-Point Structure and Variables.....	4-4
4.4	Parcel Variables.....	4-5
4.4.1	Parcel Identification.....	4-5
4.4.2	Coordinates	4-5
4.4.3	Area	4-5
4.4.4	Traffic Analysis Zone.....	4-5
4.4.5	Households.....	4-5
4.4.6	K-12 Student Enrollment	4-5
4.4.7	Employment	4-6
4.4.8	Parking.....	4-10
4.5	SACSIM Land Use Spatial Association	4-12
4.5.1	Circuitry Buffer Introduction.....	4-12
4.5.2	Files Required for Circuitry Buffer Process	4-13
4.5.3	Development of Circuitry Buffering Inputs	4-14
4.6	SACSIM Parcel Land Use User Guide.....	4-21
4.6.1	Introduction.....	4-21
4.6.2	Step 1: Create Scenario Parcel Base File.....	4-21
4.6.3	Step 2: Prepare Inputs for Parcel Buffering	4-22
4.6.4	Step 3: Run Circuitry Buffering Tool.....	4-23
4.6.5	Step 4: Prepare Population file for Allocation	4-25
4.6.6	Step 5: Prepare Parcel Buffer Outputs for Allocation Process.....	4-25

4.6.7	Step 6: Run Allocation Tool	4-27
4.6.8	Step 7: Rerun buffering analysis.....	4-29
4.6.9	Step 8: Format Parcel File for DAYSIM	4-29
5	Representative Population Data	5-1
5.1	Land Use Scenarios	5-1
5.2	Household/Population Demographics.....	5-2
5.3	Base Year household/population demographics	5-3
5.4	Future Year household/population demographics.....	5-6
5.4.1	Representative Population Generation Process.....	5-12
6	Highway Networks.....	6-1
6.1	Opening and Editing the Highway Network.....	6-1
6.2	Capacity Class.....	6-3
6.2.1	Freeways.....	6-3
6.2.2	Expressways.....	6-4
6.2.3	Other Urban/Suburban Surface Streets	6-4
6.2.4	Ramps	6-4
6.2.5	Rural Roadways	6-5
6.2.6	Special Highway Links	6-5
6.2.7	Tolling Attributes	6-5
7	Transit Networks	7-1
7.1	Working with the Transit Network.....	7-1
7.1.1	Fixed-Route Regular Bus Services.....	7-1
7.1.2	Rail Transit Services	7-1
7.1.3	Bus Rapid Transit (BRT).....	7-1
7.1.4	Park-and-Ride Lots.....	7-1
7.1.5	Coding Future or Forecasted Transit Service.....	7-1
7.2	Transit Lines	7-3
7.2.1	Transit Service Periods	7-3
7.2.2	Transit Line Attributes	7-3
7.2.3	Demand-Responsive Transit Services	7-6

- 7.3 Transit Access Coding and Network Additions..... 7-7
 - 7.3.1 Links Explicitly Coded in Highway Network 7-7
 - 7.3.2 Transit Access Links Manually Added to Highway Network 7-7
 - 7.3.3 Auto-Generated Transit Access Links 7-7
- 7.4 Transit Travel Speeds and Stop Times..... 7-8
- 7.5 Park-and-Ride Locations 7-9
 - 7.5.1 Transit Drop-Off Locations (KNR) 7-9
 - 7.5.2 Adding PNR or KNR locations 7-9
- 8 Bike and Walk Networks..... 8-1
 - 8.1 Coding Bike Facilities into the Highway Network..... 8-1
 - 8.1.1 Off-Street Bicycle-Pedestrian Facilities..... 8-1
 - 8.1.2 On-Street Bicycle Facilities 8-1
 - 8.2 Building Bike and Walk Skims..... 8-2
 - 8.2.1 Building Bike and Walk Paths for Skims..... 8-2
 - 8.2.2 Effect of Bike Facility Type 8-2
 - 8.3 Estimating Bike and Walk Trip Distances 8-4
- 9 Auto Operating Costs, Pricing and Transit Fares 9-1
 - 9.1 Auto Operating Costs 9-1
 - 9.2 Facility and Mileage Based Pricing 9-4
 - 9.2.1 Facility Pricing 9-4
 - 9.2.2 Mileage Based User Fee 9-8
 - 9.3 Auto Operating Costs and Pricing User Guide Setup 9-10
 - 9.3.1 Auto Operating Cost User Guide Setup 9-10
 - 9.3.2 Mileage Based User Fee User Guide Setup 9-10
 - 9.3.3 Facility Pricing User Guide Setup 9-11
 - 9.4 Transit Fares 9-20
 - 9.4.1 Transit Pass and Discount Models 9-20
 - 9.4.2 Limits of Transit Fare Estimation 9-20
 - 9.4.3 SACOG Transit Operator Base Fares and Transfer Policies..... 9-20
- 10 Model System Equilibration 10-1

10.1	Background and Concepts.....	10-1
10.2	SACSIM19 Equilibrium Solution Procedure	10-4
11	Sensitivity Testing.....	11-1
11.1	Introduction.....	11-1
11.2	Experimental Testing of Key Exogenous Input Factors	11-2
11.2.1	Elasticity.....	11-2
11.2.2	Auto Operating Cost	11-3
11.2.3	Off-Street Parking Price	11-7
11.2.4	Household Income.....	11-12
11.2.5	Transit Fares	11-15
11.2.6	Roadway Capacity.....	11-18
11.3	Cross Section Testing of Land Use/Transportation Factors.....	11-22
11.3.1	Background and Definition	11-22
11.3.2	Challenges of Testing Land Use-Transportation Sensitivities	11-23
11.3.3	Land Use-Transportation Sensitivity Testing with SACSIM.....	11-24
11.4	Testing of Random Variation in Model.....	11-30
11.5	Facility-Based and Pay-as-You-Go Pricing Testing	11-34
12	Model Calibration and Validation	12-1
12.1	Observed Travel Data	12-1
12.1.1	American Community Survey	12-1
12.1.2	Household Travel Surveys.....	12-1
12.1.3	Sacramento Regional Transit Airport Passenger Survey	12-2
12.1.4	On-Board Transit Surveys	12-2
12.1.5	Transit Boarding Counts	12-4
12.1.6	Traffic Counts.....	12-4
12.1.7	Vehicle Miles Traveled.....	12-6
12.1.8	Other Data Sources.....	12-7
12.2	Model Calibration.....	12-8
12.2.1	DAYSIM Model Calibration	12-8
12.3	Model Validation and Reasonableness Check.....	12-14

12.3.1	DAYSIM Reasonableness Check and Validation.....	12-14
12.3.2	Land use and Demographic Reasonableness Check	12-20
12.3.3	Highway Assignment Validation	12-28
12.3.4	Transit Network and Assignment Validation	12-42

Acknowledgments

This document is heavily based on work performed under contract to SACOG by the following firms and individuals:

- *Mark Bradley (Bradley Research and Consulting) and John L. Bowman, Ph.D. (Transportation Systems and Decision Sciences)*--Worked jointly on all phases of the data preparation and the initial development of DAYSIM during 2005- 2007, and on several subsequent updates to DAYSIM used for analysis of the 2012 Metropolitan Transportation Plan (MTP) and the region's first Sustainable Community Strategy (SCS), and for the 2016 MTP/SCS.
- *DKS Associates*—Served as prime contractor for the initial iterations of SACSIM, with Mark Bradley and John L. Bowman, Ph.D., as sub-consultants. In particular, John Gibb at DKS Associates developed the overall SACSIM application and the approach implemented for overall model equilibration and assisted in implementation of Citilabs® Public Transport software in SACSIM, described in greater detail below.
- *Resource Systems Group (RSG)* – Provided technical assistance to comprehensively update DAYSIM (e.g. updating the program code and improving the user interface and overall flexibility and adaptability of the program) and recently contracted to develop and implement the model capability to evaluate tolling strategies. In particular, Joel Freedman, Mark Bradley, and Albab Noor contributed significantly to this effort.

A significant amount of the content of this document is either drawn from, or based upon, technical memoranda and other written materials prepared by the above individuals and firms. Where material was directly copied, attribution is given; however, their influence and thinking are peppered throughout the document in ways impossible to specifically attribute.

SACOG staff was responsible for the organization and update of the document. SACOG staff who contributed significantly to the document are: *Bruce Griesenbeck, Kyle Shipley, Shengyi Gao, Darren Conly, Yanmei Ou.*
