Come see, hear, and maybe even ride in different types of transportation vehicles like electric cars, bikes, and vans. SACOG is working with local agencies to test new and innovative transportation technology and we want you to experience them first hand.

Innovative service providers and start-ups from around the country are joining us to talk about the newest technologies and showcase their efforts taking place around the Capitol Region.

These displays will be held in coordination with the AltCar Expo hosted by Clean Cities, with over 200 expected attendees.

Civic Lab is addressing smart mobility, and how these 'disruptive technologies' can be used to make the region's transportation system function more effectively, efficiently, and equitably.

Civic Lab is a program developed by the Sacramento Area Council of Governments that aims to address issues of regional importance through action at the local level.
