AIRPORT LAND USE COMMISSION

RESOLUTION NO. 1 - 2013

A RESOLUTION OF THE SACRAMENTO AREA COUNCIL OF GOVERNMENTS ADOPTING THE INITIAL STUDY/NEGATIVE DECLARATION FOR THE SACRAMENTO INTERNATIONAL AIRPORT LAND USE COMPATIBILITY PLAN

WHEREAS, the Sacramento Area Council of Governments ("SACOG") is designated as the Airport Land Use Commission ("ALUC") for the Sacramento Region, pursuant to Article 3.5, Chapter 4, Part 1, Division 9, of the Public Utilities Code; and

WHEREAS, SACOG prepared a draft Initial Study/Negative Declaration for the draft Airport Land Use Compatibility Plan ("Plan") for Sacramento International Airport which was approved for public release by the ALUC on June 20, 2013; and

WHEREAS, the draft Plan was prepared with advice from a technical advisory committee including key stakeholders, organizations, and agencies which might be affected by the Plan; and

WHEREAS, the cities of Davis, Roseville, Sacramento, West Sacramento, and Woodland and the counties of Placer, Sacramento, Sutter, and Yolo, as the affected local land use agencies, were provided with the draft Plan and the draft Initial Study/Negative Declaration; and

WHEREAS, the draft Initial Study/Negative Declaration was circulated for public review from June 27, 2013, through July 31, 2013.

WHEREAS, a public meeting was held on July 16, 2013, to receive comment from the public on the draft Plan and draft Initial Study/Negative Declaration; and

WHEREAS, notice of the July 16, 2013, public meeting was mailed to property owners adjacent to the airport and a legal notice was published in the Sacramento Bee; and

WHEREAS, based upon written and oral comments received during the public review period, revisions were made to the draft Plan; and
WHEREAS, the SACOG Board of Directors approved the release of the revised draft Plan on November 14, 2013; and

WHEREAS, the Initial Study/Negative Declaration was not revised and recirculation was not required, as the changes made to the Plan in response to comments did not create a significant environmental impact; and

WHEREAS, all of the parties who submitted written comments on the earlier draft Plan have indicated that they support the revisions in the revised draft Plan; and

WHEREAS, no other substantive comments on the revised draft Plan or the draft Negative Declaration have been received; and

WHEREAS, the SACOG Board of Directors, acting as the Airport Land Use Commission of Sacramento County, has considered all of the oral and written comments received, staff reports, and all other materials in the record of proceedings, and is fully informed thereon.

NOW THEREFORE, BE IT RESOLVED, by the SACOG Board of Directors, acting as the Airport Land Use Commission ("ALUC") of Sacramento County, that:

1. The foregoing recitals are true and correct and are hereby adopted.

2. The ALUC has been presented with the Initial Study/Negative Declaration, has independently reviewed and considered the information contained therein, and the Initial Study/Negative Declaration reflects the ALUC’s independent judgment and analysis.

3. There is no substantial evidence in the record that the project will have a significant effect on the environment.

4. The Initial Study/Negative Declaration for the Sacramento International Airport Land Use Compatibility Plan is hereby adopted.

5. Pursuant to the CEQA Guidelines, the documents and other materials that constitute the record of proceedings upon which the SACOG Board of Directors has based its decision are located in and may be obtained from SACOG at 1415 L Street, Suite 300, Sacramento, CA 95814.
PASSED AND ADOPTED, this 12th day of December 2013, by the following vote of the SACOG Board of Directors:

AYES:

AIRPORT LAND USE COMMISSION

RESOLUTION NO. 2 - 2013

A RESOLUTION OF THE SACRAMENTO AREA COUNCIL OF GOVERNMENTS ADOPTING THE SACRAMENTO INTERNATIONAL AIRPORT LAND USE COMPATIBILITY PLAN

WHEREAS, the Sacramento Area Council of Governments ("SACOG") is designated as the Airport Land Use Commission ("ALUC") for the Sacramento Region, pursuant to Article 3.5, Chapter 4, Part 1, Division 9, of the Public Utilities Code; and

WHEREAS, SACOG has prepared an Airport Land Use Compatibility Plan ("Plan") for Sacramento International Airport, including a revised Airport Influence Area, in order to preserve and protect the airport and the land uses surrounding it pursuant to Public Utilities Code §21670, subdivision (a); and

WHEREAS, the draft Plan was prepared with advice from a technical advisory committee including representatives from local government and other agencies which might be affected by the Plan; and

WHEREAS, the cities of Davis, Roseville, Sacramento, West Sacramento, and Woodland and counties of Placer, Sacramento, Sutter, and Yolo, as the affected local land use agencies, have reviewed the draft Plan; and

WHEREAS, a properly noticed public meeting was held on July 16, 2013, to receive comment from the public on the draft Plan and draft Initial Study/Negative Declaration; and

WHEREAS, known stakeholders, including landowners and affected local jurisdictions, were provided notice and consulted about the major policies of the draft Plan; and

WHEREAS, based upon written and oral comments received during the public review period, responses to comments were prepared and revisions were made to the draft Plan; and

WHEREAS, the SACOG Board of Directors approved the release of the revised draft Plan on November 14, 2013; and
WHEREAS, all of the parties who submitted written comments on the earlier draft Plan have indicated that they support the revisions to the Plan; and

WHEREAS, no other substantive comments on the revised draft Plan have been received; and

WHEREAS, the SACOG Board of Directors, acting as the Airport Land Use Commission of Sacramento County, has adopted the Initial Study/Negative Declaration for Sacramento International Airport Land Use Compatibility Plan and has considered all of the oral and written comments received, staff reports, and all other materials in the record of proceedings, and is fully informed thereon.

NOW THEREFORE, BE IT RESOLVED, that the SACOG Board of Directors, acting as the Airport Land Use Commission of Sacramento County, hereby adopts the Airport Land Use Compatibility Plan for Sacramento International Airport, including a revised Airport Influence Area.

PASSED AND ADOPTED, this 12th day of December 2013, by the following vote of the SACOG Board of Directors:

Chapter 1

Introduction
Introduction

OVERVIEW OF THE PLAN

This Sacramento International Airport Land Use Compatibility Plan is one of a series of compatibility plans adopted by the Sacramento Area Council of Governments (SACOG) acting in its capacity as the Airport Land Use Commission (ALUC) for Sacramento, Sutter, Yolo, and Yuba counties. The basic function of the plan is to promote compatibility between Sacramento International Airport and the land uses surrounding it to the extent that these areas have not already been devoted to incompatible uses. The plan accomplishes this function through establishment of a set of compatibility criteria applicable to new development around the airport. Neither this Compatibility Plan nor the ALUC have authority over existing land uses or over operation of the airport.

Geographically, the Compatibility Plan pertains to portions of the jurisdictions of Sacramento, Sutter, and Yolo counties, together with parts of the cities of Davis, Sacramento, West Sacramento, and Woodland. Special districts, school districts, and community college districts within those jurisdictions are also subject to the provisions of the plan. The authority of the ALUC does not extend to state, federal, or tribal lands.

AIRPORT LAND USE COMPATIBILITY PLANNING

The creation of airport land use commissions and the preparation of airport land use compatibility plans are requirements of the California State Aeronautics Act (Aeronautics Act / Public Utilities Code Section 21670 et seq.). Provisions for creation of ALUCs were first established under state law in 1967 (see Appendix B for a copy of the statutes). With limited exceptions, an ALUC is required in every county in the state and a compatibility plan is required for each public-use and military airport.

Purpose and Objective

Although the Aeronautics Act has been amended numerous times since its original enactment, the fundamental purpose of ALUCs to promote land use compatibility around airports has remained unchanged. As expressed in the present statutes, this purpose is:

“...to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.”
The compatibility plans they adopt are the basic tools that ALUCs use to achieve this purpose. The ultimate objective of ALUCs, though, is to ensure that land use actions taken by local agencies also adhere to this purpose. ALUCs pursue this objective by reviewing the general plans, specific plans, zoning ordinances, building regulations, and certain individual development actions of local agencies for consistency with the policies and criteria in the applicable compatibility plan. ALUCs also review master plans and other development plans for civilian airports proposed by airport operators to determine if those plans are consistent with the compatibility plan or if modifications should be made to the compatibility plan to reflect current airport planning.

**Relationship between ALUCs and County and City Governments**

The relationship between ALUCs and the governments of the counties and the cities within their jurisdiction is set forth in the Aeronautics Act. For the most part, ALUCs act independently from the local land use jurisdictions. ALUCs must consult with the involved agencies regarding establishment of airport influence area boundaries (Public Utilities Code Section 21675(c)), but otherwise have the authority to adopt compatibility plans without approval from county or city governing bodies. ALUCs, though, do not have the authority to implement their own compatibility policies.

The responsibility for implementation of ALUC-adopted compatibility plans rests with the affected local agencies. Government Code Section 65302.3 establishes that each county and city affected by an airport land use compatibility plan must make its general plan and any applicable specific plans consistent with the ALUC’s compatibility plan. Alternatively, local agencies can take the series of steps listed in the Aeronautics Act and described later in this chapter to overrule the ALUC policies.

Local agencies’ other responsibility is to refer their plans and certain other proposed land use actions to the ALUC for review and determination of those actions’ consistency with the ALUC’s compatibility plan. Proposed adoption or amendment of general plans, specific plans, zoning ordinances, and building regulations always must be referred to the ALUC. However, other actions such as ones associated with individual development proposals are subject to ALUC review only until the local agency’s general plan and specific plan(s) have been made consistent with the compatibility plan or the agency has overruled the ALUC.

**Compatibility Plan Policy Framework**

**State Laws and Guidelines**

Many of the procedures that govern how ALUCs operate are defined by state law, particularly the Aeronautics Act. As noted earlier, statutory provisions in the Public Utilities Code establish the requirements for ALUC adoption of compatibility plans, which airports must have these plans, and some of the steps involved in plan adoption. The Aeronautics Act also dictates the requirements for airport land use compatibility reviews by the ALUC. The types of actions that local jurisdictions must refer for review are specified, for example.

With respect to airport land use compatibility criteria, the statutes say little however. Instead, a section of the law enacted in 1994 refers to another document, the *Airport Land Use Planning Handbook* published by the California Department of Transportation Division of Aeronautics. Specifically, the Aeronautics Act says that, when preparing compatibility plans for individual airports, ALUCs shall “be guided by” the information contained in the *Handbook*. The *Handbook* is not regulatory in nature, however,
and it does not constitute formal state policy except to the extent that it explicitly refers to state laws. Rather, its guidance is intended to serve as the starting point for compatibility planning around individual airports.

The policies and maps in this *Sacramento International Airport Land Use Compatibility Plan* take into account the guidance provided by the current edition of the *Handbook*, dated October 2011.

An additional function of the *Airport Land Use Planning Handbook* is established elsewhere in California state law. The Public Resources Code creates a tie between the *Handbook* and California Environmental Quality Act (CEQA) documents. Specifically, Section 21096 requires that lead agencies must use the *Handbook* as “a technical resource” when assessing airport-related noise and safety impacts of projects located in the vicinity of airports.

The October 2011 edition of the *Handbook* is available for downloading from the Division of Aeronautics web site ([www.dot.ca.gov/hq/planning/aeronaut](http://www.dot.ca.gov/hq/planning/aeronaut)).

**Compatibility Plan Relationship to Airport Plans**

Airport land use compatibility plans are distinct from airport master plans and other types of airport development plans, but are closely connected to them. In simple terms, the issues addressed by airport master plans are primarily on-airport whereas those of concern in a compatibility plan are mostly off-airport. The purpose of airport master plans is to assess the demand for airport facilities and to guide the development necessary to meet those demands. An airport master plan is prepared for and adopted by the agency that owns and/or operates the airport. In contrast, the major purpose of a compatibility plan is to ensure that incompatible development does not occur on lands surrounding the airports. The responsibility for preparation and adoption of compatibility plans lies with each county’s airport land use commission.

The principal connection between the two types of plans stems from the Aeronautics Act. Specifically, Public Utilities Code Section 21675(a) requires that ALUC plans be based upon a long-range airport master plan adopted by the airport owner/proprietor or, if such a plan does not exist for a particular airport, an airport layout plan may be used with the approval of the California Division of Aeronautics. Furthermore, the compatibility plan must reflect “the anticipated growth of the airport during at least the next 20 years.”

The connection works in both directions. While a compatibility plan must be based upon an airport master plan, Public Utilities Code Section 21676(c) requires that any proposed modification to an airport master plan be referred to the ALUC to determine if the proposal is consistent with the compatibility plan. Provided that the off-airport compatibility implications of the proposed modifications are adequately addressed in the master plan, the outcome of this process usually is that the compatibility plan will need to be updated to mirror the new master plan.

**Compatibility Planning for Sacramento International Airport**

**Responsibilities**

The responsibility for preparation of a compatibility plan for the Sacramento International Airport environs rests with SACOG which serves as the ALUC for Sacramento, Sutter, Yolo, and Yuba...
counties in accordance with the designated body provisions of Public Utilities Code Section 21670.1. The counties of El Dorado and Placer, although members of SACOG, have their own ALUCs.

Sacramento International Airport is situated in an unincorporated area of northwestern Sacramento County, but has far reaching impacts across multiple counties and cities. Because SACOG’s ALUC jurisdiction includes Sutter and Yuba counties, in addition to Sacramento County, this Compatibility Plan applies within each of these counties and also their incorporated cities. Although a small portion of the overflight impact area identified herein extends into Placer County, the policies of this Compatibility Plan are strictly advisory with respect to lands in that county.

This Compatibility Plan replaces an earlier plan—Sacramento International Airport Comprehensive Land Use Plan—which the ALUC adopted for the airport in 1984 and last revised in January 1994.

**Sources of Information and Guidance**

As required by the Aeronautics Act, the California Airport Land Use Planning Handbook provides guidance for the compatibility policies set forth in this Sacramento International Airport Land Use Compatibility Plan. The Handbook was used both to structure and define compatibility criteria and to establish the procedures to be followed by the ALUC and local agencies in implementation of the criteria.

The Sacramento International Airport Master Plan adopted by the Sacramento County Board of Supervisors in 2004 is one of the primary sources of information used in this Compatibility Plan regarding the County’s long-range development proposals for the airport. Additional sources are the environmental review documents associated with the Master Plan and the 2012 Airport Layout Plan. The development proposals considered in these planning documents include the addition of a parallel, third runway on the west and the extension of the existing east runway. Chapter 3 of this Compatibility Plan contains more detailed information on the existing and ultimate airport configuration.

With respect to aircraft activity projections, the Compatibility Plan primarily relies upon an analysis of the functional capacity of the airport for land use compatibility. This “Theoretic Capacity” that resulted was based on the assumption of all planned facilities being developed. The analysis determined that the airport would have a Theoretic Capacity of approximately 450,000 annual operations. This number represents a conservative estimate (that is, at the upper end of the reasonably likely range) for activity levels at the airport well beyond the 20-year minimum planning period of this document.

Finally, a Technical Advisory Committee (TAC) was established specifically for the Compatibility Plan project. The committee’s membership consisted of staff from the Sacramento County Airport System which operates the airport and the planning departments of the affected counties and cities. The TAC assisted with providing airport and land use data, reviewing discussion papers and draft materials, and providing comments for consideration in the draft plan.

**General Plan Consistency**

As noted above, each local agency having jurisdiction over land uses within an ALUC’s planning area is required by state law to modify its general plan and any affected specific plans to be consistent with the compatibility plan. The law says that the local agency must take this action within 180 days of when the ALUC adopts or amends its compatibility plan.
Overrule Process

The only other course of action available to local agencies is to overrule the ALUC by a two-thirds vote of its governing body after making findings that the agency’s plans are consistent with the intent of state airport land use planning statutes in the Aeronautics Act. Additionally, the local agency must provide both the ALUC and the California Department of Transportation, Division of Aeronautics, with a copy of the local agency’s proposed decision and findings at least 45 days in advance of its decision to overrule and must hold a public hearing on the proposed overruling (Public Utilities Code Section 21676(a) and (b)). The ALUC and the Division of Aeronautics may provide comments to the local agency within 30 days of receiving the proposed decision and findings. If comments are submitted, the local agency must include them in the public record of the final decision to overrule the ALUC (Sections 21676, 21676.5 and 21677). Note that similar requirements apply to local agency overruling of ALUC actions concerning individual development proposals for which ALUC review is mandatory (Section 21676.5(a)) and airport master plans (Section 21676(c)).

Attaining Consistency

A general plan does not need to be identical with the ALUC compatibility plan in order to be consistent with the compatibility plan. To meet the consistency test, a general plan must do two things:

- It must specifically address compatibility planning issues, either directly or through reference to a zoning ordinance or other policy document; and
- It must avoid direct conflicts with compatibility planning criteria.

The land use jurisdictions affected by this Sacramento International Airport Land Use Compatibility Plan may need to modify their general plans, specific plans, and other policy documents to be consistent with the Compatibility Plan. It must be emphasized, however, that local agencies need not change land use designations to make them consistent with the ALUC criteria if the current designations reflect existing development. They merely would need to establish policies to ensure that the nonconforming uses would not be expanded in a manner inconsistent with this Compatibility Plan and that any redevelopment of the affected areas would be consistent with the Compatibility Plan.

Compatibility planning issues can be reflected in a general plan in several ways:

- **Incorporate Policies into Existing General Plan Elements**—One method of achieving planning consistency is to modify existing general plan elements. For example, airport land use noise policies could be inserted into the noise element, safety policies could be placed into a safety element, and the primary compatibility criteria and associated maps plus the procedural policies might fit into the land use element. With this approach, direct conflicts would be eliminated and the majority of the mechanisms and procedures necessary to ensure compliance with compatibility criteria could be fully incorporated into the local jurisdiction’s general plan.

- **Adopt a General Plan Airport Element**—Another approach is to prepare a separate airport element of the general plan. Such a format may be advantageous when the community’s general plan also needs to address on-airport development and operational issues. Modification of other plan elements to provide cross-referencing and eliminate conflicts would still be necessary.

- **Adopt Compatibility Plan as Stand-Alone Document**—Jurisdictions selecting this option would simply adopt as a local policy document the relevant portions of the Sacramento International Airport Land Use Compatibility Plan—specifically, the policies and maps in Chapters 2. Applicable background
CHAPTER 1

INTRODUCTION

information from Chapter 3 could be included as well. Changes to the community’s existing general plan would be minimal. Policy reference to the Compatibility Plan would need to be added and any direct land use or other conflicts with compatibility planning criteria would have to be removed. Limited discussion of compatibility planning issues could be included in the general plan, but the substance of most compatibility policies would appear only in the stand-alone document.

› Adopt Airport Combining District or Overlay Zoning Ordinance—This approach is similar to the stand-alone document except that the local jurisdiction would not explicitly adopt the Compatibility Plan as policy. Instead, the compatibility policies would be restructured as an airport combining or overlay zoning ordinance. A combining zone serves as an overlay of standard community-wide land use zones and modifies or limits the uses permitted by the underlying zone. Flood hazard combining zoning is a common example. An airport combining zone ordinance can serve as a convenient means of bringing various airport compatibility criteria into one place. The airport-related height-limit zoning that many jurisdictions have adopted as a means of protecting airport airspace is a form of combining district zoning. Noise and safety compatibility criteria, together with procedural policies, would need to be added to create a complete airport compatibility zoning ordinance. Other than where direct conflicts need to be eliminated from the local plans, implementation of the compatibility policies would be accomplished solely through the zoning ordinance. Policy reference to airport compatibility in the general plan could be as simple as mentioning support for the airport land use commission and stating that policy implementation is by means of the combining zone. (An outline of topics which could be addressed in an airport combining zone is included in Appendix H.)

PLAN CONTENTS

This Sacramento International Airport Land Use Compatibility Plan is complete unto itself and is separate and independent from other compatibility plans adopted by the Sacramento Area Council of Governments, acting as the Airport Land Use Commission for Sacramento, Sutter, Yolo, and Yuba Counties. The Compatibility Plan is organized into three chapters and a set of appendices. The intent of this introductory chapter is to set the overall context of airport land use compatibility planning in general and for Sacramento International Airport in particular.

The most important components of the plan are found in Chapter 2. That chapter contains the policies by which the ALUC operates and conducts compatibility reviews of proposed land use and airport development actions. It also specifies the compatibility criteria and other policies applicable specifically to Sacramento International Airport. Chapter 3 presents various background data regarding features, impacts, and environs of Sacramento International Airport. Chapter 3 also serves to document the data and assumptions upon which the compatibility policy maps for the airport are based.

Also included in this document are a set of appendices containing a copy of state statutes concerning airport land use commissions and other general information pertaining to airport land use compatibility planning. This material is mostly taken from other sources and does not represent ALUC policy except where cited as such in Chapter 2—specifically the state ALUC statutes and certain other laws (Appendix B) and Federal Aviation Regulations Part 77 (Appendix C).

In support of the adoption of this Sacramento International Airport Land Use Compatibility Plan, an Initial Study of environmental impacts was prepared pursuant to the requirements of CEQA. Issues addressed included those identified in the 2007 California Supreme Court decision in Muzzy Ranch Company v. Solano Airport Land Use Commission. These issues include assessment of the potential future displacement
of residential and nonresidential land use development as a result of implementation of the *Sacramento International Airport Land Use Compatibility Plan*.

The Sacramento Area Council of Governments Board of Directors, acting in its capacity as the Airport Land Use Commission for Sacramento, Sutter, Yolo, and Yuba counties, adopted a Negative Declaration and this *Compatibility Plan* on December 12, 2013.
Chapter 2

Policies
Policies

1. General Applicability

1.1. Purpose and Use

1.1.1. Airport Land Use Commission: The Sacramento Area Council of Governments (SACOG) is designated to serve as the Airport Land Use Commission (ALUC) for Sacramento, Sutter, Yolo, and Yuba Counties.

1.1.2. Basic Purpose: The basic purpose of this Sacramento International Airport Land Use Compatibility Plan is to establish procedures and criteria applicable to airport land use compatibility planning in the vicinity of Sacramento International Airport. The Compatibility Plan is prepared in accordance with the requirements of the California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) and guidance provided in the California Airport Land Use Planning Handbook (Handbook) published by the California Department of Transportation Division of Aeronautics in October 2011.

1.1.3. Use by ALUC: The ALUC shall:

(a) Formally adopt this Compatibility Plan in accordance with Public Utilities Code Section 21674(c).

(b) When a Land Use Action or Airport-Related Action is referred for review as provided by Section 1.5, make a determination as to whether such Action is consistent with the criteria set forth in this Compatibility Plan.

1.1.4. Use by Affected Local Agencies:

(a) This Compatibility Plan and its policies shall apply to all of the following affected Local Agencies (see Policy 1.2.24), each of which has or may in the future have jurisdiction over lands within parts of the Sacramento International Airport Influence Area defined by this plan; specifically:

(1) County of Sacramento.
(2) County of Sutter.
(3) County of Yolo.
(4) County of Yuba.
(5) City of Davis.
(6) City of Sacramento.
(7) City of West Sacramento.
(8) City of Woodland.

(9) Any future city within Sacramento, Sutter, Yolo, and Yuba counties that may be incorporated within all or part of the Sacramento International Airport Influence Area.

(10) Special districts, school districts and community college districts within Sacramento, Sutter, Yolo, and Yuba counties to the extent that the district boundaries extend into the Airport Influence Area.

(b) Local Agencies preparing an environmental document for any Project within the Airport Influence Area shall address the compatibility criteria contained in this Compatibility Plan in addition to referencing guidance from the Handbook.¹

(c) Each of the affected counties and municipalities shall:

1. Modify its respective general plan, applicable specific plan(s), and zoning ordinance to be consistent with the policies in the Compatibility Plan.²

2. Utilize the Compatibility Plan, either directly or as reflected in the appropriately modified general plan and zoning ordinance, when making other planning decisions regarding proposed development of lands with the Sacramento International Airport Influence Area.

3. Refer proposed Land Use Actions for review by the ALUC as specified by Policies 1.5.1 and 1.5.2 herein.

(d) Special districts, school districts, and community college districts shall:

1. Apply the policies of this Compatibility Plan when creating plans and making other planning decisions regarding the proposed development of lands under their control with the Sacramento International Airport Influence Area.

2. Refer proposed Land Use Actions for review by the ALUC as specified by Policies 1.5.1 and 1.5.2 herein.

(e) As the Airport owner, the County of Sacramento, shall refer proposed airport master plans and certain airport improvement plans to the ALUC for review (see Policy 1.5.5).

1.1.5. Use by Federal and State Entities: Lands controlled by federal or state agencies or by Native American tribes are not subject to the provisions of the state ALUC statutes or this Compatibility Plan. However, the compatibility criteria included herein are intended as recommendations to these agencies.

1.1.6. Effective Date: The policies in this Compatibility Plan shall become effective as of the date that the ALUC adopts the plan. The Effective Date of this Compatibility Plan is [date to be inserted].

¹ The California Environmental Quality Act (CEQA) requires environmental documents for Projects situated within an Airport Influence Area to evaluate whether the Project would expose people residing or working in the Project area to excessive levels of airport-related noise or to airport-related safety hazards (Public Resources Code Section 21096). In the preparation of such environmental documents, the law specifically requires that the Airport Land Use Planning Handbook published by the California Division of Aeronautics be utilized as a technical resource.

² Public Utilities Code Section 21676(a) specifically requires general plan consistency. Because specific plans and zoning ordinances are also subject to ALUC review, the consistency requirement also extends to them.
(a) The previous compatibility plan for the Airport, Sacramento International Airport Comprehensive Land Use Plan, was adopted by the ALUC in 1984 with the last amendment adopted in 1994. The earlier plan, as amended in 1994, shall remain in effect until the Effective Date of this Compatibility Plan and shall again become effective if the entirety of this Compatibility Plan were to be invalidated by court action.

(b) Any Project or phase of a Project that has received Local Agency approvals sufficient to qualify it as an Existing Land Use (see Policies 1.2.18 and 1.4.2) prior to the Effective Date of this Compatibility Plan shall not be required to comply with the policies herein. Rather, the policies of the 1994 amended compatibility plan shall apply.

1.1.7. Examples: Where an example is used in this Compatibility Plan, such example or examples are provided for purposes of illustration only and any such example or set of examples are not intended nor shall such be construed as an exhaustive list of the subject matter to which it corresponds.

1.2. Definitions

The following definitions apply for the purposes of the policies set forth in this Compatibility Plan. Additional terms are defined in the Glossary (Appendix I).

1.2.1. Aeronautics Act: Except as indicated otherwise, the article of the California Public Utilities Code (Sections 21670 et seq.) pertaining to airport land use commissions and airport land use compatibility planning (also known as the California State Aeronautics Act).

1.2.2. Air Operations Area (AOA): Any area of an airport used or intended to be used for landing, takeoff, or surface maneuvering of aircraft. An air operations area includes such paved areas or unpaved areas that are used or intended to be used for the unobstructed movement of aircraft in addition to its associated runway, taxiways, or apron. See Map 5 for depiction of the existing Sacramento International Airport AOA.

1.2.3. Airport: Sacramento International Airport, a public-use airport owned by the County of Sacramento and operated by the Sacramento County Airport System (SCAS).

1.2.4. Airport Influence Area: An area, as delineated herein (see Map 1 at back of Chapter 2), in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses. The Airport Influence Area constitutes the area within which certain Land Use Actions are subject to ALUC review to determine consistency with the policies herein.

1.2.5. Airport Land Use Commission (ALUC): The Sacramento Area Council of Governments (SACOG) acting in its capacity as the Airport Land Use Commission for Sacramento, Sutter, Yolo, and Yuba Counties.

1.2.6. Airport Land Use Commission Secretary: The Chief Executive Officer of SACOG or a person designated by the Chief Executive Officer with the concurrence of the SACOG Chairperson.

1.2.7. Airport Proximity Disclosure: A form of buyer awareness documentation required by California state law and applicable to many transactions involving residential real estate including previously occupied dwellings. The disclosure notifies a prospective purchaser that the property is located in proximity to an airport and may be subject to annoyances and inconveniences associated with the flight of aircraft to, from, and around the airport. See
Policy 3.5.3 for applicability. Also see Policy 1.2.34 for a related buyer awareness tool, Recorded Overflight Notification.

1.2.8. **Airspace Protection Area**: The area beneath the Airspace Protection Surfaces for Sacramento International Airport as depicted on Maps 4a, 4b, and 4c, Compatibility Policy Map: Airspace Protection for the existing and two alternative future runway configurations.

1.2.9. **Airspace Protection Surfaces**: Imaginary surfaces in the airspace surrounding the Sacramento International Airport defined in accordance with criteria set forth in Federal Aviation Regulations Part 77. These surfaces establish the maximum height that objects on the ground can reach without potentially creating constraints or hazards to the use of the airspace by aircraft approaching, departing, or maneuvering in the vicinity of the Airport.

1.2.10. **Ancillary Use**: A use related to the primary use and occupying no more than 10% of total building floor area.

1.2.11. **Aviation-Related Use**: Any facility or activity directly associated with the air transportation of persons or cargo or the operation, storage, or maintenance of aircraft at an airport or heliport. Such uses specifically include, but are not limited to, runways, taxiways, and their associated protection areas defined by the Federal Aviation Administration, together with aircraft aprons, hangars, fixed base operations facilities, terminal buildings, etc. Hotels or other commercial/industrial facilities on airport property do not qualify as an aviation-related use.

1.2.12. **Avigation Easement**: An easement that conveys rights associated with aircraft overflight of a property, including but not limited to creation of noise and limits on the height of structures and trees, etc. (see Appendix H).

1.2.13. **Community Noise Equivalent Level (CNE L)**: The noise metric adopted by the State of California for land use planning purposes, including describing airport noise impacts. The noise impacts are typically depicted by a set of contours, each of which represents points having the same CNE L value.

1.2.14. **Compatibility Plan**: This document, the Sacramento International Airport Land Use Compatibility Plan.

1.2.15. **Compatibility Zone**: Any of the noise, safety, airspace protection, or overflight zones established herein.

1.2.16. **Critical Airspace Protection Zone**: A Compatibility Zone consisting of the Federal Aviation Regulations (FAR) Part 77 primary surface and the area beneath portions of the approach and transitional surfaces to where these surfaces intersect with the horizontal surface.

1.2.17. **Density**: The number of dwelling units per acre. Density is used in this Compatibility Plan as the measure by which proposed Residential Development is evaluated for compliance with safety compatibility criteria (compare Intensity). Density is calculated on the basis of the overall site size (i.e., gross acreage of the site).

1.2.18. **Existing Land Use**: A land use that either physically exists or for which Local Agency (see Policy 1.2.24) commitments to the proposal have been obtained (see Policy 1.4.2).

1.2.19. **Federal Aviation Regulations (FAR) Part 77**: The part of Federal Aviation Regulations that deals with objects affecting navigable airspace in the vicinity of airports. Objects that exceed the Part 77 height limits constitute airspace obstructions. FAR Part 77 establishes standards for identifying obstructions to navigable airspace, sets forth requirements for notice to the FAA of certain proposed construction or alteration, and provides for aero-
nautical studies of obstructions to determine their effect on the safe and efficient use of airspace. (See Appendix C of this Compatibility Plan for the text of FAR Part 77; also see Glossary).

1.2.20. **Handbook:** The California Airport Land Use Planning Handbook published by California Department of Transportation, Division of Aeronautics in October 2011. The Handbook provides guidance to ALUCs for the preparation, adoption, and amendment of compatibility plans.

1.2.21. **Infill:** Development of vacant or underutilized land within areas that are already largely developed or used more intensively. See Policy 4.1.1 for criteria used to identify Infill areas for the purposes of this Compatibility Plan.

1.2.22. **Intensity:** The number of people per acre. Intensity is used in this Compatibility Plan as the measure by which most proposed Nonresidential Development is evaluated for compliance with safety compatibility criteria (compare Density). Sitewide average Intensity is calculated on the basis of the overall site size (i.e., gross acreage of the site).

1.2.23. **Land Use of Special Concern:** A land use that represents special safety concerns irrespective of the number of people associated with the use. Specifically: uses with vulnerable occupants; hazardous materials storage; or critical community infrastructure.

1.2.24. **Local Agency:** Any county, city, or other local governmental entity such as a special district, school district, or community college district—including any future city or district—having any jurisdictional territory lying within the Sacramento International Airport Influence Area as defined herein. These entities are subject to the provisions of this Compatibility Plan.

1.2.25. **Major Land Use Action:** Actions related to proposed land uses for which compatibility with Airport activity is a particular concern, but for which ALUC review is not always mandatory under state law. These types of actions are listed in Policy 1.5.4.

1.2.26. **Noise Impact Area:** The area within which the noise impacts, measured in terms of CNEL, generated by aircraft operating at the Airport may represent a land use compatibility concern. The Noise Impact Area for Sacramento International Airport is depicted on Map 2, Compatibility Policy Map: Noise.

1.2.27. **Noise-Sensitive Land Uses:** Land uses for which the associated primary activities, whether indoor or outdoor, are susceptible to disruption by loud noise events. The most common types of noise sensitive land uses include, but are not limited to: residential, hospitals, nursing facilities, intermediate care facilities, educational facilities, libraries, museums, places of worship, child-care facilities, and certain types of passive recreational parks and open space.

1.2.28. **Nonconforming Use:** An Existing Land Use that does not comply with the compatibility criteria set forth in this Compatibility Plan. See Policy 4.1.3 for criteria applicable to Land Use Actions involving Nonconforming Uses.

1.2.29. **Object Free Area (OFA):** An area on the ground surrounding an airport runway within which the Federal Aviation Administration (FAA) prohibits all objects except certain ones necessary for aircraft navigation or maneuvering. The OFA dimensions to be applied for the purposes of this Compatibility Plan are as established by the FAA.

1.2.30. **Overrule:** An action that a Local Agency can take in accordance with provisions of state law if the Local Agency wishes to proceed with adoption or amendment of a general plan or spe-
cific plan, adoption or approval of a zoning ordinance or building regulation, or modification of an airport master plan\(^3\) or, under conditions specified in Section 1.5.2, a Major Land Use Action\(^4\) affecting the Airport Influence Area in spite of an ALUC finding that the Land Use Action is inconsistent with this Compatibility Plan. See Section 1.6 for process required to overrule the ALUC. Similar Overrule provisions are also available to Sacramento County as the agency owning Sacramento International Airport if the ALUC were to find a proposed airport master plan inconsistent with the Compatibility Plan.

1.2.31. **Primary Approach Area:** The area is comprised of: all locations within the CNEL 60 dB contour depicted on Map 2; all locations within Safety Zones 1 through 5 as depicted on Map 3; all locations within the Critical Airspace Protection Zone as depicted on Maps 4a, 4b, or 4c.

1.2.32. **Project; Land Use Action; Development Proposal:** Terms similar in meaning and all referring to the types of land use development activities, either publicly or privately sponsored, that are subject to the provisions of this Compatibility Plan.

1.2.33. **Reconstruction:** The rebuilding of an existing nonconforming structure that has been fully or partially destroyed as a result of a calamity (not planned Reconstruction or Redevelopment). See Policy 4.1.3(c)(3).

1.2.34. **Recorded Overflight Notification:** A form of buyer awareness documentation recorded in the chain of title of a property stating that the property may be subject to annoyances and inconveniences associated with the flight of aircraft to, from, and around a nearby airport. Unlike an Avigation Easement (see Policy 1.2.10), a Recorded Overflight Notification does not convey property rights from the property owner to the airport and does not restrict the height of objects. See Policy 3.5.2 for applicability. Also see Policy 1.2.7 for a related buyer awareness tool, Airport Proximity Disclosure.

1.2.35. **Redevelopment:** Development of a new use (not necessarily a new type of use) to replace an existing use at a Density or Intensity that may vary from the existing use. Redevelopment Projects are subject to the provisions of this Compatibility Plan to the same extent as other forms of proposed development.

1.2.36. **Residential Development:** Any subdivision of land for residential purposes or any construction of residential units other than on an existing designated single-family residential parcel.

1.2.37. **Routine Overflight Zone:** The area commonly overflown by aircraft at an altitude of approximately 3,000 feet or less as they approach, depart, or engage in flight training at Sacramento International Airport.

1.2.38. **Traffic Pattern Area:** The area near the Airport within which aircraft are engaged in initial climb-out, final descent, or closed-circuit flight training. Aircraft within this area regularly fly at an altitude of 2,000 feet or less. (See Map 6 at back of Chapter 2.)

---

\(^3\) Public Utilities Code Sections 21676(a), (b), and (c).

\(^4\) Public Utilities Code Section 21676.5(a).
1.3. Geographic Scope

1.3.1. Sacramento International Airport Influence Area: As defined in accordance with state law, the influence area of Sacramento International Airport encompasses all lands on which the uses could be negatively affected by present or future aircraft operations at the Airport as well as lands on which the uses could negatively affect Airport usage. The Sacramento International Airport Influence Area is depicted in Map 1 and is controlled by the overflight area boundary. ALUC establishment of the Airport Influence Area requires “hearing and consultation with the involved agencies.”

(a) The Airport Influence Area constitutes the area within which certain Land Use Actions are subject to ALUC review to determine consistency with the Compatibility Plan.

(b) In delineating the Airport Influence Area, the geographic extents of four types of compatibility concerns are considered:

1. Noise: Locations exposed to potentially disruptive levels of aircraft noise. For the purposes of this Compatibility Plan, these locations are deemed to be ones within the Sacramento International Airport projected CNEL 60 dB contour. See Policy 3.2.2 and Map 2.

2. Safety: Areas where the risk of an aircraft accident poses heightened safety concerns for people and property on the ground. For the purposes of this Compatibility Plan, these locations are as shown on Map 3.

3. Airspace Protection: Places where height and various other land use characteristics need to be restricted in order to prevent creation of physical, visual, or electronic hazards to flight within the airspace required for operation of aircraft to and from the Airport. These land use characteristics include ones that attract hazardous wildlife. The airspace protection areas for Sacramento International Airport are depicted on Maps 4a, 4b, 4c, and 5.

4. Overflight: Locations where aircraft overflying can be intrusive and annoying to many people. For the purposes of this Compatibility Plan, these locations are considered to be ones regularly overflown at an altitude of approximately 3,000 feet or less by aircraft arriving, departing, or engaged at flight training at the airport (see Exhibit 11 in Chapter 3). The overflight area is illustrated on Map 6 and is the controlling determinant of the Airport Influence Area boundary.

(c) Each of these four concerns is separately addressed in this Compatibility Plan within its own “layer” representing that particular compatibility factor. See Section 3 for the policies and maps associated with each layer.

(d) Other impacts sometimes created by airports (e.g., air pollution, automobile traffic, etc.) are not addressed herein and are not factors that the ALUC shall consider in reviewing land use Projects.

1.3.2. Airport Runway Configuration Assumptions: The Sacramento County Airport System (SCAS), operator of Sacramento International Airport, proposes to modify the existing Airport...
runway system configuration by extending the eastern runway and adding a parallel third runway on the west. Two different scenarios for the eastern runway extension have been considered by SCAS and, as of the adoption date of this *Compatibility Plan*, both remain as options (see details in Chapter 3).

(a) For the purposes of this *Compatibility Plan*, land use compatibility planning and protection shall be provided and account for both of the contemplated future runway scenarios until such time as the County of Sacramento formally selects a specific scenario.

(b) Additionally, until such time as construction of the runway system improvements is completed, land use compatibility planning and protection shall be provided for the runway system configuration existing at any given point in time. The configuration existing as of the Effective Date of this *Compatibility Plan* is taken into account herein along with the future scenarios.

(c) It is the intent of the ALUC to update this *Compatibility Plan* to reflect future Sacramento County-adopted runway system plans and completed construction.

1.3.3. **Referral Areas:** The Sacramento International Airport Influence Area is divided into two sub-areas, Referral Area 1 and Referral Area 2. Requirements for referral of Land Use Actions to the ALUC for review differ between these two areas (see Section 1.4). Map 1, Compatibility Policy Map: Airport Influence Area depicts the limits of each of the two referral areas.

(a) Referral Area 1 encompasses locations where noise and/or safety represent compatibility concerns. Areas within the FAA-defined 10,000-foot separation distance for wildlife attractants are also encompassed within Referral Area 1 (see Policy 3.4.3).

(b) Referral Area 2 includes locations where airspace protection (other than wildlife hazards) and/or overflight are compatibility concerns, but not noise or safety.

1.4. **Limitations of this Compatibility Plan**

1.4.1. **Airport Operations:** In general, neither the ALUC nor this *Compatibility Plan* have authority over the planning and design of on-airport facilities or over Airport operations including where and when aircraft fly, the types of aircraft flown, and other aspects of aviation.\(^7\) Exceptions to this limitation are as follows:

(a) State law requires ALUC review of airport master plans and certain development plans to the extent that aviation-related facilities or activities could have off-airport land use compatibility implications (see Policy 1.5.5).\(^8\)

(b) Nonaviation Development of Airport property is subject to ALUC review in the same manner that ALUC review is required for non-aviation development actions off Airport property. The review may take place as part of an airport master plan or on an individual development Project basis (see Policy 1.5.4(c)).

1.4.2. **Existing Land Use:** The policies of this *Compatibility Plan* do not apply to Existing Land Uses.\(^9\) A land use is considered to be “existing” when one or more of the below conditions has been met prior to the adoption date of the *Compatibility Plan* by the ALUC.

---

\(^7\) This is an explicit limitation of state law under Public Utilities Code Section 21674(e).
\(^8\) See Public Utilities Code Sections 21676(c) and 21664.5.
\(^9\) This is an explicit limitation of Public Utilities Code Sections 21670(a) and 21674(a).
(a) Qualifying Criteria: An Existing Land Use is one that either physically exists or for which Local Agency commitments to the proposal have been obtained in one or more of the following manners:

1. A tentative parcel or subdivision map has been approved and not expired;
2. A vesting tentative parcel or subdivision map has been approved;
3. A development agreement has been approved and remains in effect;
4. A final subdivision map has been recorded;
5. A use permit or other discretionary entitlement has been approved and not yet expired; or
6. A valid building permit has been issued and not yet expired.

(b) Revisions to Approved Development: Filing of a new version of any of the approval documents listed in Paragraph (a) of this policy means that the use no longer qualifies as existing and, therefore, is subject to ALUC review in accordance with the policies of Section 2.

(c) Expiration of Local Agency Commitment: If a Local Agency’s commitment to a Development Proposal, as set forth in Paragraph (a) of this policy, expires, the proposal will no longer qualify as an Existing Land Use. As such, the proposal shall be subject to the criteria of this Compatibility Plan.

(d) Existing Nonconforming Uses: The ALUC has no ability to reduce or remove Nonconforming or otherwise incompatible Existing Land Uses from the airport environs. However, proposed changes to existing uses (i.e., Reconstruction, Redevelopment) are subject to ALUC review if the changes would result in increased nonconformity with the compatibility criteria (see Policy 4.1.3).

1.4.3. Development by Right:

(a) This Compatibility Plan allows:

1. Construction of a single-family home on a legal lot of record (not a new lot created by a lot split or subdivision) that exists as of the date of adoption of this Compatibility Plan provided the use is permitted by local land use regulations and the home is neither:
   - In Safety Zone 1 (see Map 3); nor
   - Within the CNEL 65 dB contour (see Maps 2 and 2a).
2. Construction of a secondary unit as defined by state law.
3. Lot line adjustments provided that new developable parcels would not be created and the resulting Density or Intensity of the affected property would not exceed the applicable safety criteria indicated in Table 2, Safety Compatibility Criteria.
4. Construction or establishment of a family day care home serving 14 or fewer children either in an existing dwelling or in a new dwelling permitted by the policies of this Compatibility Plan.

(b) The sound attenuation and Avigation Easement dedication requirements set by Policies 3.2.3 and 4.1.1 shall apply to development permitted under this policy.
1.5. Types of Actions Subject to ALUC Review

1.5.1. Land Use Actions for which Referral is Always Mandatory: Prior to approving any of the following types of Land Use Actions, the Local Agency (see Policy 1.2.24) always must refer the Land Use Action to the ALUC for determination of consistency with the Sacramento International Airport Land Use Compatibility Plan.\(^{10}\)

(a) Local Agency adoption or approval of any new general or specific plan or any amendment thereto that affects lands within the Airport Influence Area.

(b) Local Agency adoption or approval of a zoning ordinance or building regulation, including any proposed change or variance to any such ordinance or regulation, that (1) affects land within the Airport Influence Area and (2) involves the types of airport impact concerns listed in Policy 1.3.1(b).

1.5.2. Interim Mandatory Referral of Major Land Use Actions: In addition to the actions listed in Policies 1.5.1 and 1.5.5 for which referral to the ALUC is always required, referral of certain other actions is mandatory as follows.

(a) Local Agencies must refer all Major Land Use Actions (see list in Policy 1.5.4) to the ALUC for review until such time as:

(1) The ALUC finds that a Local Agency’s general plan or specific plan is consistent with the compatibility criteria and other policies presented in Sections 3 and 4 of this chapter of the Compatibility Plan; or

(2) The Local Agency has overruled the ALUC determination of inconsistency (see Section 1.6).

(b) Referral of lesser actions of types not included on the Major Land Use Actions list is optional.\(^{11}\)

1.5.3. Voluntary Referral of Major Land Use Actions: After a Local Agency has revised its general plan or specific plan to be consistent with this Compatibility Plan (see Section 4.2.2) or has overruled the ALUC, referral of Major Land Use Actions for ALUC review is voluntary.\(^{12}\)

(a) The ALUC requests Local Agencies to continue to refer Major Land Use Actions as listed in Policy 1.5.4 for informal review and comment. ALUC review of these types of Projects can serve to enhance their compatibility with Airport activity.

(b) The ALUC Secretary is authorized on behalf of the ALUC to provide comments on Major Land Use Actions referred to the ALUC on a voluntary basis.

(c) Because the ALUC reviews of Land Use Actions under these circumstances do not represent formal consistency determinations as is the case with actions referred under Policies 1.5.1 or 1.5.5, Local Agencies are not required to adhere to the overruling pro-

---

10 Public Utilities Code Section 21676(b).

11 Under the conditions indicated in Policy 1.5.2(a), state law (Public Utilities Code Section 21676.5(a)) allows ALUCs to require Local Agencies to refer all actions, regulations, and permits involving land within an Airport Influence Area to the ALUC for review. The ALUC has opted to reduce this all inclusive list to just Major Land Use Actions.

12 Once the conditions indicated in Policy 1.5.2(a) have been met, the ALUC no longer has authority under state law to require that all actions, regulations, and permits be referred for review. However, the ALUC and the Local Agency can agree that the ALUC should continue to receive, review, and comment upon individual Projects.
cess if they elect to approve a Project without incorporating design changes or conditions recommended by the ALUC or ALUC Secretary.

1.5.4. Major Land Use Actions: The scope or character of certain Major Land Use Actions, as listed below in Paragraphs (a) through (f), is such that their compatibility with Airport activity is a potential concern. Even though these actions may be basically consistent with the local general plan or specific plan, sufficient detail may not be known to enable a full airport compatibility evaluation at the time that the general plan or specific plan is reviewed. To enable better assessment of compliance with the compatibility criteria set forth herein, ALUC review of these actions may be warranted. If there is uncertainty as to whether an action should be referred to the ALUC for review, Local Agencies should consult with the ALUC Secretary. The circumstances under which ALUC review of these actions is to be conducted are indicated in Policies 1.5.2 and 1.5.3 above.

(a) Actions Affecting Land Uses within Referral Area 1:

   (1) Any proposed expansion of the sphere of influence of a city or special district.
   (2) Proposed pre-zoning associated with future annexation of land to a city.
   (3) Proposed development agreements or amendments to such agreements.
   (4) Proposed Residential Development, including land divisions, consisting of 5 or more dwelling units or parcels.
   (5) Any discretionary Development Proposal for Projects having a building floor area of 20,000 square feet or greater unless only ministerial approval (e.g., a building permit) is required.
   (6) Any discretionary Development Proposal for Projects expected to attract more than 100 people (including employees, customers/visitors) to outdoor activities to the Project site during a typical busy period.
   (7) Major infrastructure or other capital improvements (e.g., water, sewer, or roads) that would promote urban uses in undeveloped or agricultural areas to the extent that such uses are not reflected in a previously reviewed general plan or specific plan.
   (8) Any proposal for non-aviation use of land within Safety Zone 1.
   (9) Proposed land acquisition by a government entity for any facility (for example, a school or hospital) designed to accommodate more than 100 people during a typical busy period.
   (10) Any proposed object (including buildings, poles, antennas, and other structures) having a height that requires review by the Federal Aviation Administration in accordance with Part 77 of the Federal Aviation Regulations.
   (11) Any Project having the potential to create electrical or visual hazards to aircraft in flight, including:
          ▶ Electrical interference with radio communications or navigational signals;
          ▶ Lighting which could be mistaken for Airport lighting;
          ▶ Glare in the eyes of pilots of aircraft using the Airport; and
          ▶ Impaired visibility near the Airport.
   (12) Any project having the potential to create a thermal plume extending to an altitude where aircraft fly.
(b) Actions Affecting Land Uses within Referral Area 2: Only the actions listed in Paragraphs (a)(10), (a)(11) and (a)(12) of this policy require referral to the ALUC for review.

(c) Proposed non-aviation development of Airport property if such development has not previously been included in an airport master plan or community general plan reviewed by the ALUC. (See Policy 1.2.11 for definition of aviation-related use.)

(d) Proposed Redevelopment (see Policy 1.2.35) if the Project is of a type listed in Paragraph (a) of this policy.

(e) Any other proposed Land Use Action, as determined by the Local Agency, involving a question of compatibility with Airport activities.

1.5.5. Mandatory Referral of Airport Planning and Development Actions: Prior to approving either of the following types of airport planning and development actions, the County of Sacramento as proprietor of Sacramento International Airport must refer the action to the ALUC for determination of consistency with the Sacramento International Airport Land Use Compatibility Plan.

(a) Adoption or modification of a master plan for Sacramento International Airport, a public-use airport.\(^{13}\)

(b) Any proposal for “expansion” of Sacramento International Airport if such expansion will require an amended Airport Permit from the State of California. As used in the statutes, “expansion” primarily includes construction of a new runway, extension or realignment of an existing runway, or related acquisition of land.\(^{14}\)

1.5.6. Submittal of Environmental Documents: The ALUC does not have a formal responsibility to review the environmental document associated with Land Use Actions or Airport actions referred to it for review.

(a) The ALUC authorizes the ALUC Secretary to provide comments on environmental documents submitted to the ALUC for comment.

(b) If an environmental document has been prepared at the time that the Land Use Action or Airport action is referred for review and the document contains information pertinent to the review, then a copy must be included with the referral.

1.6. Overruling the ALUC

1.6.1. ALUC Determination of “Inconsistent”: If the ALUC determines that a proposed Land Use Action, regulation, or permit or a proposed Airport project is inconsistent with this Compatibility Plan, the ALUC must notify the Local Agency and shall indicate the reasons for the inconsistency determination.

1.6.2. Overruling of ALUC by Local Agency:

(a) If a Local Agency wishes to proceed with a proposed Land Use Action, regulation, permit, or Project or Airport project that the ALUC has determined to be inconsistent with the Compatibility Plan, or if the Local Agency wishes to ignore a condition for consisten-

\(^{13}\) Public Utilities Code Section 21676(c).

\(^{14}\) Public Utilities Code Section 21664.5.
cy, the Local Agency must overrule the ALUC determination in accordance with the provisions of state law.\footnote{For a Local Agency to overrule the ALUC, that agency must: (1) prepare specific findings that the proposed action is consistent with the purposes of the ALUC statutes as defined in Public Utilities Code Section 21670(a); (2) provide the ALUC and the California Division of Aeronautics a copy of the proposed decision and findings at least 45 days prior to the decision to overrule; (3) hold a public hearing on the matter; (4) take action by a two-thirds vote of the agency’s governing body; and (5) include the comments, if any, received from the ALUC and the Division of Aeronautics in the public record of the final decision to overrule the ALUC. See Public Utilities Code Sections 21676 and 21676.5 for specific procedures for overruling the ALUC. Further guidance is provided in the California Airport Land Use Handbook published by the California Division of Aeronautics (see beginning on page 5-15 of the 2011 edition). Also see Chapter 1 of this Compatibility Plan for a summary of the statutory requirements.}

(b) The overruling process applies only to determinations made by the ALUC, not ones made by the ALUC Secretary in accordance with Policy 2.3.2. Disagreements over determinations made by the ALUC Secretary are first to be appealed to the ALUC. See Policy 2.3.4.

1.6.3. ALUC Comments on Proposed Overruling: The ALUC may provide comments on the proposed overruling decision. The ALUC delegates to the ALUC Secretary the authority to provide comments.

2. ALUC Review Process

2.1. General Requirements

2.1.1. Timing of Project Submittal by Local Agency: The precise timing of the ALUC’s or ALUC Secretary's review of a proposed Land Use Action may vary depending upon the nature of the specific Project.

(a) Referrals to the ALUC should be made at the earliest reasonable point in time so that the ALUC’s review can be duly considered by the Local Agency prior to when the agency formalizes its actions. Depending upon the type of plan or Project and the normal scheduling of meetings, ALUC review can be completed before, after, or concurrently with review by the local planning commission and other advisory bodies, but must be accomplished before final action by the Local Agency.

(b) Completion of a formal application with the Local Agency is not required prior to a Local Agency’s referral of a proposed Land Use Action to the ALUC. Rather, a Project applicant may request, and the Local Agency may refer, a proposed Land Use Action to the ALUC for early review, so long as the Local Agency is able to provide the ALUC with the Project submittal information for the proposal, as specified and required in Section 2.3.1 of this Compatibility Plan.

2.1.2. Responsibilities for Project Consistency Analysis: The ALUC and Local Agencies are each responsible for analyzing a Project proposal for compliance with the compatibility criteria set forth in this Compatibility Plan.

(a) Local Agency staff may choose to initially evaluate proposed Projects and work with the Project applicant to bring the proposal into compliance with Compatibility Plan criteria. The ALUC Secretary will provide informal input at this stage if requested.
(b) When a proposed Project is formally referred to the ALUC, the ALUC Secretary shall review the proposal to determine if it is consistent with the Compatibility Plan policies. Projects of a type that require a formal consistency determination by the ALUC (those listed in Policy 1.5.1) will be placed on the agenda for action.

(c) Subsequent to when a Local Agency’s general plan and applicable specific plans have been determined by the ALUC to be consistent with the Compatibility Plan, the Local Agency and its staff are responsible for the consistency analysis of Major Land Use Actions. The ALUC Secretary will provide informal input if requested or the Local Agency can voluntarily refer the Land Use Action to the ALUC for a consistency determination. Land Use Actions for which referral to the ALUC is mandatory regardless of the general plan and specific plan consistency status (actions listed in Policy 1.5.1) must continue to be referred for a consistency determination by the ALUC.

(d) The Local Agency and its staff are responsible for ensuring that a development continues to comply with Compatibility Plan criteria on an on-going basis following completion of the Project (Intensity and height limitations in particular).

2.1.3. Public Input: Where applicable, the ALUC shall provide public notice and obtain public input before acting on any plan, regulation, or other land use proposal under consideration.16

2.1.4. Fees: Any applicable review fees as established by the ALUC shall accompany the submittal of actions for ALUC or ALUC Secretary review.17

2.2. Review Process for General Plans, Specific Plans, Zoning Ordinances, and Building Regulations

2.2.1. Required Submittal Information: Copies of the complete text and maps of the plan, ordinance, or regulation proposed for adoption or amendment must be submitted to the ALUC. Any supporting material, such as environmental documents, assessing the proposal’s consistency with the Compatibility Plan should be included. If the amendment is required as part of a proposed Major Land Use Action, then the information listed in Policy 2.3.1 shall also be included to the extent applicable.

2.2.2. Initial ALUC Review of General Plan Consistency: In conjunction with adoption or amendment of this Sacramento International Airport Land Use Compatibility Plan, the ALUC shall review the general plans and specific plans of affected Local Agencies to determine their consistency with the ALUC’s policies.

   (a) State law18 requires that, within 180 days of the ALUC’s adoption or amendment of this Compatibility Plan, each Local Agency affected by the plan must amend its general plan and any applicable specific plan(s) to be consistent with the ALUC’s Compatibility Plan or, alternatively, provide required notice, adopt findings, and overrule the ALUC in accordance with statutory requirements.19

---

16 In accordance with Public Utilities Code Section 21675.2(d).
17 Public Utilities Code Section 22671.5(f) allows for ALUCs to charge fees for Project reviews.
18 Government Code Section 65302.3.
19 Public Utilities Code Section 21676(b).
(b) Prior to taking action on a proposed amendment of a general plan or specific plan as necessitated by Paragraph (a) of this policy, the Local Agency must submit a draft of the proposal to the ALUC for review and approval.

(c) In conjunction with its referral of a general plan or specific plan amendment to the ALUC in response to the requirements of Paragraphs (a) and (b) above, a Local Agency must identify areas that it requests the ALUC to consider as Infill in accordance with Policy 4.1.2 if it wishes to take advantage of the Infill policy provisions. The ALUC will include a determination on the Infill as part of its action on the consistency of the general plan and/or applicable specific plan(s).

2.2.3. **Subsequent Reviews of Related Land Use Development Proposals:** Once a Local Agency’s general plan and applicable specific plans have been made consistent with this Compatibility Plan, or the Local Agency has overruled an ALUC finding of inconsistency regarding those plans, subsequent land use development actions that are consistent both with those local plans and with any related ordinances and regulations also previously reviewed by the ALUC are subject to ALUC review only under the conditions indicated in Policies 1.5.2 and 2.3.7.

2.2.4. **ALUC Action Choices:** When reviewing a general plan, specific plan, zoning ordinance, or building regulation for consistency with the Compatibility Plan, the ALUC has three choices of action:

(a) Find the plan, ordinance, or regulation consistent with the Compatibility Plan. To make such a finding with regard to a general plan, the conditions identified in Section 4.2.2 must be met.

(b) Find the plan, ordinance, or regulation consistent with the Compatibility Plan, subject to conditions and/or modifications that the ALUC may require. Any such conditions should be limited in scope and described in a manner that allows compliance to be clearly assessed.

(c) Find the plan, ordinance, or regulation inconsistent with the Compatibility Plan. In making a finding of inconsistency, the ALUC shall note the specific conflicts or shortcomings upon which its determination is based.

2.2.5. **Response Time:** The ALUC must respond to a Local Agency’s request for a consistency determination on a general plan, specific plan, zoning ordinance, or building regulation within 60 days from the date of referral.  

(a) The date of referral is deemed to be the date on which all applicable Project information as specified in Policy 2.2.1 is received by the ALUC Secretary and the ALUC Secretary determines that the application for a consistency determination is complete.

(b) If the ALUC fails to make a determination within the 60-day period, the proposed Land Use Action shall be deemed consistent with the Compatibility Plan.

(c) The 60-day review period may be extended if the referring Local Agency or Project applicant agrees in writing or so states at an ALUC public hearing on the Land Use Action.

(d) Regardless of ALUC action or failure to act, the proposed Land Use Action must comply with other applicable local, state, and federal regulations and laws.

---

20 Public Utilities Code Section 21676(d).
(c) The referring *Local Agency* shall be notified of the *ALUC’s* action in writing.

### 2.3. Review Process for Major Land Use Actions

2.3.1. *Required Submittal Information:* A proposed *Major Land Use Action* referred for *ALUC* (or *ALUC Secretary*) review shall include the following information to the extent applicable:

(a) Property location data (assessor’s parcel number, street address, subdivision lot number).

(b) An accurately scaled map depicting the *Project* site location in relationship to the Sacramento International Airport boundary and runways.

(c) A description of the proposed use(s), current general plan and zoning designations, and the type of *Land Use Action* being sought from the *Local Agency* (e.g., zoning variance, special use permit, building permit).

(d) A detailed site plan and supporting data showing: site boundaries and size; existing uses that will remain; location of existing and proposed structures, open spaces, and water bodies; ground elevations (above mean sea level) and elevations of tops of structures and trees. Additionally:

   (1) For residential uses, an indication of the potential or proposed number of dwelling units per acre (excluding any secondary units as defined by state and local law).

   (2) For nonresidential uses, the total floor area for each type of proposed use, the number of auto parking spaces, and, if known, the maximum number of people potentially occupying the total site or portions thereof at any one time.

(e) Identification of any features, during or following construction, that would increase the attraction of birds or cause other wildlife hazards to aircraft operations at the *Airport* or in its environs (see Policy 3.4.3). Such features include, but are not limited to the following:

   (1) Open water areas.

   (2) Sediment ponds, retention basins.

   (3) Detention basins that hold water for more than 48 hours.

   (4) Artificial wetlands.

(f) Identification of any characteristics that could create electrical interference, confusing or bright lights, glare, smoke, or other electrical or visual hazards to aircraft flight.

(g) Any environmental document (initial study, draft environmental impact report, etc.) that may have been prepared for the *Project*.

(h) Staff reports regarding the *Project*.

(i) Other relevant information that the *ALUC* or *ALUC Secretary* determine to be necessary to enable a comprehensive review of the proposed *Land Use Action*.

2.3.2. *Review by ALUC Secretary:* The *ALUC* delegates to the *ALUC Secretary* the review and consistency determination of *Major Land Use Actions* referred on a mandatory basis under Policy 1.5.2 or on a voluntary basis under Policy 1.5.3. In reviewing these actions, the *ALUC Secretary* shall:
(a) Consult with the manager of Sacramento International Airport on *Land Use Actions* within the *Airport Influence Area*.

(b) Provide to the *ALUC*, at its next regular meeting, a list of all *Projects* reviewed and the determination made.

2.3.3. **ALUC Secretary’s Choices:** The *ALUC Secretary* is authorized, on behalf of the *ALUC*, to make consistency determinations on *Major Land Use Actions* reviewed in accordance with Policy 1.5.2. Such determinations shall be made in writing and shall describe the consistency analysis and the basis for the determination. The *ALUC Secretary* may opt to forward complex or controversial actions to the *ALUC* for a consistency determination. For actions not forwarded to the *ALUC*, the *ALUC Secretary* has three choices of action:

(a) Find the *Project* consistent with the *Compatibility Plan*.

(b) Find the *Project* consistent with the *Compatibility Plan*, subject to compliance with such conditions as the *ALUC Secretary* may specify. Any such conditions should be limited in scope and described in a manner that allows compliance to be clearly assessed (e.g., the height of a structure).

(c) Find the *Project* inconsistent with the *Compatibility Plan*. In making a finding of inconsistency, the *ALUC Secretary* shall note the specific conflicts upon which the determination is based.

2.3.4. **Appeal of ALUC Secretary’s Action:** The affected *Local Agency*, *Project* applicant, the County of Sacramento as *Airport* owner, or other directly interested party may appeal to the *ALUC* a consistency determination made by the *ALUC Secretary* on a *Major Land Use Action* reviewed in accordance with Policy 1.5.2. The *ALUC* shall then review the proposed *Land Use Action*, the *ALUC Secretary’s* determination, and information supporting the appeal and make a final determination regarding the proposed *Land Use Action’s* consistency with the *Compatibility Plan*. Any appeal of the *ALUC Secretary’s* determination must be submitted within 30 days of the date when the determination was issued.

2.3.5. **ALUC Action Choices:** When reviewing appealed *Major Land Use Actions*, the *ALUC* has the same three action choices provided for the *ALUC Secretary* in Policy 2.3.3.

2.3.6. **Response Time:** In responding to *Major Land Use Actions* referred for review, the policy of the *ALUC* is that:

(a) When a *Major Land Use Action* is referred for review on a mandatory basis as required by Policy 1.5.2:

1. The date of referral is deemed to be the date on which all applicable *Project* information as specified in Policy 2.3.1 is received by *ALUC Secretary* and the *ALUC Secretary* determines that the application for a consistency determination is complete.

2. Reviews by the *ALUC Secretary* shall be completed within 30 days of the date of referral.
(3) Reviews of Projects appealed to the ALUC for a consistency determination shall be completed within 60 days of the date of the appeal.\textsuperscript{21}

(4) If the ALUC Secretary or the ALUC fail to make a determination within the above time periods, the proposed Land Use Action shall be deemed consistent with the Compatibility Plan.

(b) When a Major Land Use Action is referred on a voluntary basis in accordance with Policy 1.5.3, review by the ALUC Secretary and/or the ALUC should be completed in a timely manner enabling the comments to be considered by decision-making bodies of the referring Local Agency.

(c) Regardless of action or failure to act on the part of the ALUC Secretary or the ALUC, the proposed Land Use Action must comply with other applicable local, state, and federal laws and regulations.

(d) The referring Local Agency shall be notified of the ALUC Secretary’s and/or the ALUC’s action in writing.

2.3.7. Subsequent Reviews of Related Land Use Development Proposals: Once a Project has been found consistent with the Compatibility Plan, it generally need not be referred for review at subsequent stages of the planning process (e.g., for a use permit after a zoning change has been reviewed). However, additional ALUC review is required if any of the following are true:

(a) At the time of the original ALUC review, the Project information available was only sufficient to determine consistency with compatibility criteria at a planning level of detail, not at the Project design level. For example, the proposed land use designation indicated in a general plan, specific plan, or zoning amendment may have been found consistent, but information on site layout, maximum Intensity limits, building heights, and other such factors that may also affect the consistency determination for a Project may not have yet been known.

(b) The design of the Project subsequently changes in a manner that affects previously considered compatibility issues and could raise questions as to the validity of the earlier finding of consistency. The ALUC will defer to the Local Agency’s judgment; however, proposed changes warranting a new review include, but are not limited to, the following:

(1) For residential uses, any increase in the number of dwelling units;

(2) For nonresidential uses, a change in the types of proposed uses, any increase in the total floor area, and/or a change in the allocation of floor area among different types of uses in a manner that could result in an increase in the Intensity of use (more people on the site) to a level exceeding the criteria set forth in this Compatibility Plan;

(3) Any increase in the height of structures or other design features such that the height limits established herein would be exceeded or exceeded by a greater amount;

\textsuperscript{21} For Major Land Use Actions, this 60-day limit is not a statutory requirement, but is set by the ALUC to be consistent with Policy 2.2.5 and Public Utilities Code Section 21676(d) regarding general plans, specific plans, zoning ordinances, and building regulations.
(4) Major site design changes (such as incorporation of clustering or modifications to the configuration of open land areas proposed for the site) if site design was a factor in the initial Project review;

(5) Any significant change to a proposed Project for which a special exception was granted in accordance with Policy 4.1.5;

(6) Any new design features that would create visual hazards (e.g., certain types of lights, sources of glare, and sources of dust, steam, or smoke);

(7) Any new equipment or features that would create electronic hazards or cause interference with aircraft communications or navigation; and/or

(8) Addition of features that could attract wildlife that is potentially hazardous to aircraft operations.

(c) At the time of original ALUC review, conditions were placed on the Project that require subsequent ALUC review.

(d) The local jurisdiction concludes that further review is warranted.

2.4. Review Process for Airport Master Plans and Development Plans

2.4.1. Required Submittal Information: A Sacramento International Airport master plan or development plan referred to the ALUC for review shall contain sufficient information to enable the ALUC to adequately assess the noise, safety, airspace protection, and overflight impacts of Airport activity upon surrounding land uses.

(a) When a new or amended master plan is the subject of the ALUC review, the noise, safety, airspace protection, and overflight impacts should be addressed in the plan report and/or in an accompanying environmental document. Proposed changes in Airport facilities and usage that could have land use compatibility implications should be noted.

(b) For Airport development plans, the relationship to a previously adopted master plan or other approved plan for the Airport should be indicated—specifically, whether the proposed development implements an adopted/approved plan or represents an addition or change to any such previous plan. Any environmental document prepared for the Project should be included in the submittal.

(c) For either airport master plans or development plans, the following specific information should be included to the extent applicable:

(1) A layout plan drawing of the proposed facility or improvements showing the location of:
   ‣ Property boundaries;
   ‣ Runways or helicopter takeoff and landing areas;
   ‣ Runway or helipad protection zones; and
   ‣ Aircraft or helicopter approach/departure flight routes.

(2) A revised map of the Airspace Protection Surfaces as defined by Federal Aviation Regulations Part 77 if the proposal would result in changes to these surfaces. Maps reflecting the current and future configurations of the Sacramento International Airport Airspace Protection Surfaces are included in Section 3.4 of this chapter.
(3) Updated activity forecasts, including the number of operations by each type of aircraft proposed to use the facility, the percentage of day versus night operations, and the distribution of takeoffs and landings for each runway direction. The effects of the proposed development on the forecast Airport usage indicated in Chapter 3 of this Compatibility Plan should be described.

(4) Proposed flight track locations and projected noise contours. Differences from the flight track data and noise contours presented in Chapter 3 of this Compatibility Plan should be described.

(5) A map showing existing and planned land uses in the areas affected by aircraft activity associated with implementation of the proposed master plan or development plan.

(6) Identification and proposed mitigation of impacts on surrounding land uses to the extent that those impacts would be greater than indicated by the Policy Maps included in this chapter.

2.4.2. ALUC Action Choices for Airport Plans: When reviewing a proposed new or revised airport master plan or new development plans for Sacramento International Airport, the ALUC has three action choices (see Section 4.4 for policies pertaining to the substance of the ALUC review of Airport plans):

(a) Find the Airport plan consistent with the Compatibility Plan.

(b) Find the Airport plan consistent with the Compatibility Plan with the condition that the Compatibility Plan be modified to reflect the assumptions and proposals of the Airport plan.

(c) Find the Airport plan inconsistent with the Compatibility Plan.

2.4.3. Response Time: The ALUC must respond to the referral of an airport master plan or development plan within 60 days from the date of referral.\(^{22}\)

(a) The date of referral is deemed to be the date on which all applicable Project information as specified in Policy 2.4.1 is received by ALUC Secretary and the ALUC Secretary determines that the application for a consistency determination is complete.

(b) If the ALUC fails to make a determination within the specified period, the proposed Land Use Action shall be deemed consistent with the Compatibility Plan.

(c) Regardless of ALUC action or failure to act, the proposed Land Use Action must comply with other applicable local, state, and federal regulations and laws.

(d) The County of Sacramento, as Airport owner, shall be notified of the ALUC’s action in writing.

\(^{22}\) Public Utilities Code Section 21676(d).
CHAPTER 2

3. **Compatibility Criteria**

3.1. **Evaluating Land Use Consistency**

3.1.1. *Evaluating Compatibility of New Development:* The compatibility of proposed land uses within Sacramento International Airport Influence Area shall be evaluated in accordance with:

(a) The specific noise, safety, airspace protection, overflight, and other compatibility policies set forth in Sections 3.2 through 3.5 and in Section 4;

(b) The criteria listed in Table 1, Noise Compatibility Criteria, and Table 2, Safety Compatibility Criteria, and

(c) The Compatibility Zones depicted on the Compatibility Policy Maps in this chapter.

3.1.2. *Compatibility Criteria Tables:* Table 1, Noise Compatibility Criteria, and Table 2, Safety Compatibility Criteria, list general land use categories and indicate each use as being either “normally compatible,” “conditionally compatible,” or “incompatible” depending upon the noise and safety Compatibility Zones in which it is located. These three compatibility determinations are defined in Policies 3.2.1 and 3.3.1 as well as in the respective criteria tables.

(a) When evaluating a proposed development, each component land use category (e.g., agriculture, industrial, office) of a Project shall be evaluated as a separate development and shall individually satisfy the criteria for the respective land use category in the noise and safety criteria tables.

(b) Land uses not specifically listed in the noise and safety criteria tables shall be evaluated using the criteria for similar listed uses.

3.2. **Noise Compatibility**

---

**Noise Policy Background Information:**

The following Noise Policy Background Information (in different typeface) has been considered in formulating the Noise Compatibility policies and criteria in this section, but is provided for informational purposes only and does not itself constitute ALUC policy. For additional discussion of noise compatibility concepts, see Appendix D.

**Policy Objective**

The purpose of noise compatibility policies is to avoid establishment of Noise-Sensitive Land Uses in the portions of the Airport environs that are exposed to significant levels of aircraft noise.

**Measures of Noise Exposure**

As is standard practice in California, this Compatibility Plan uses the Community Noise Equivalent Level (CNEL) metric as the primary basis for evaluating the degree to which lands around the Airport are exposed to airport-related noise. CNEL is a cumulative noise metric in that it takes into account not just the loudness of individual noise events, but also the number of events over time. Cumulative exposure to aircraft noise is depicted by a set of contours, each of which represents points having the same CNEL value. The noise contours depict the greatest annualized noise impact, measured in terms of CNEL, which is anticipated to be generated by the aircraft operating at the Airport over the planning time frame.

The noise contours included in Map 2, Compatibility Policy Map: Noise are based upon contours adopted by the County of Sacramento for land use planning purposes within unincorporated areas of the county. These contours reflect a “Theoretic Capacity” level of Airport activity extending beyond the minimum 20-
year time frame that state law requires be utilized in compatibility plans (see description and data in Chapter 3). The contours in Map 2 have been adjusted from the Theoretic Capacity contours adopted by Sacramento County to take into account both of the contemplated future runway system configuration scenarios. The contours are a composite set of contours comprised of the highest noise exposure associated with the two future runway scenarios at any given location.

Factors Considered in Setting Noise Compatibility Criteria
Factors considered in setting the criteria in this section include the following:

- Established state regulations and guidelines, including noise compatibility recommendations in the California Airport Land Use Planning Handbook (2011).
- Ambient noise levels in the community, as well as noise from other transportation noise sources. Ambient noise levels influence the potential intrusiveness of aircraft noise upon a particular land use and vary greatly between rural, suburban, and urban communities.
- The extent to which noise would intrude upon and interrupt the activity associated with a particular use. Susceptibility to speech interference or sleep disturbance as a result of single-event noise levels is a factor in this regard. Noise levels above approximately 65 dBA are sufficient to cause speech interference. Highly Noise-Sensitive Land Uses include residences, schools, libraries, and outdoor theaters.
- The extent to which the land use activity itself generates noise.
- The extent of outdoor activity, particularly noise-sensitive activities, associated with a particular land use.
- The extent to which indoor uses associated with a particular land use may be made compatible with application of sound attenuation. (Typical new building construction provides sufficient insulation to attenuate outdoor-to-indoor noise by at least 20 dB.)

3.2.1. Evaluating Noise Compatibility for New Development: The noise compatibility of proposed land uses within the influence area of Sacramento International Airport shall be evaluated in accordance with the policies set forth in this section, including the criteria listed in Table 1, Noise Compatibility Criteria and the noise exposure contours depicted on Map 2, Compatibility Policy Map: Noise.

(a) The criteria in Table 1 indicate the maximum acceptable Community Noise Equivalent Level (CNEL) exposure for new residential land uses and a range of nonresidential land uses. Within the various noise exposure ranges, each land use type is shown as being either “normally compatible,” “conditional,” or “incompatible.”

(b) “Normally Compatible” means that the proposed land use shall be presumed to be acceptable within locations having the indicated noise exposure.

(1) Indoor uses are “normally compatible” if either: they involve activities that are inherently noisy; or, standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor CNEL. For land use types that are compatible because of noise levels inherent with the activity, sound attenuation must be provided for associated office, retail, and other noise-sensitive indoor spaces sufficient to reduce exterior noise to an interior maximum of CNEL 50 dB.

(2) Outdoor uses are “normally compatible” if the activities associated with the land use may be carried out with minimal interference from aircraft noise at the indicated CNEL.
(c) “Conditional” means that the conditions indicated in Table 1 must be satisfied in order for the proposed land use to be acceptable.

1. Indoor uses must have building structures that are capable of attenuating exterior noise from all noise sources to the indoor CNEL indicated by the number in the cell.

2. The acceptability of outdoor uses is dependent upon characteristics of the specific use. Caution should be exercised with regard to Noise-Sensitive Outdoor Land Uses because these uses are likely to be disrupted by aircraft noise events. This caution is directed at the Project proponent and is not intended to preclude approval of the Project.

(d) “Incompatible” means that the proposed land use shall not be allowed under any circumstances except as noted in Paragraph (3) below.

1. Indoor uses would have unacceptable noise levels if windows are open. At exposures above CNEL 65 dB, extensive mitigation techniques would be required to make the indoor environment acceptable for performance of activities associated with the land use even with windows closed.

2. Outdoor uses would be exposed to severe noise interference that would prevent performance of activities associated with the land use.

3. Exceptions to an “incompatible” designation may only be made if site-specific special conditions exist. See Policy 4.1.5.

3.2.2. Maximum Acceptable Exterior Noise Levels: To minimize noise-sensitive development in noisy areas around the Airport, new land use development shall be restricted in accordance with the following:

(a) Residential Development and Children’s Schools:

1. All new Residential Development and children’s schools are deemed incompatible within the projected CNEL 60 dB contour of Sacramento International Airport.

2. Map 2, Compatibility Policy Map: Noise depicts the area within which this restriction applies.

3. Where special circumstances exist and special measures are taken to address the adverse consequences, exceptions to the CNEL 60 dB criterion are provided for in this Compatibility Plan as described in Section 4.2.

4. Exceptions are also provided for existing residential lots. See Policy 1.4.3.

(b) Nonresidential Development: New Nonresidential Development is deemed incompatible in locations where the airport-related noise exposure would be highly disruptive to the specific land use. Applicable criteria are indicated in Table 1.

3.2.3. Maximum Acceptable Interior Noise Levels: To the extent that the criteria in Table 1 and other policies herein permit the development, land uses for which interior activities may be easily disrupted by noise shall be required to comply with the following interior noise level criteria.

(a) The maximum, aircraft-related, interior noise level that shall be considered acceptable for land uses near airports is:

1. CNEL 45 dB in:
   - Any habitable room of single- or multi-family residences
   - Children’s schools (K-12)
CHAPTER 2 POLICIES

› Libraries
› Long-term lodging (e.g., dormitories), congregate care facilities, and nursing homes
› Hotels, motels, and other short-term lodging;
› Hospitals;
› Adult educational and institutional facilities;
› Places of worship, meeting halls, theaters, and mortuaries; and
› Miscellaneous other uses as listed in Table 1, Noise Compatibility Criteria.

(2) CNEL 50 dB in:
› Offices and office areas of industrial facilities and research and development facilities;
› Retail centers and stores; and
› Personal and miscellaneous services.

(b) The noise contours depicted in Map 2 shall be used in calculating compliance with these criteria. The calculations should assume that windows are closed.

(c) When a proposed building lies within multiple CNEL range zones (e.g., partly in 60-65 dB and partly in 65-70 dB), the higher range zone shall apply for the purposes of determining sound attenuation requirements unless less than 25% of the building floor area is within that zone. In such case, the lower range zone may be used.

(d) Where Table 1 indicates that buildings associated with a particular land use must be capable of attenuating exterior noise to the specified maximum interior noise level, acoustical data documenting that the structure will be designed to comply with the criterion shall be provided to the Local Agency as part of the building permit process. The Local Agency shall be responsible for assuring compliance.

(e) Exceptions to the interior noise level criteria in Paragraph (a) of this policy may be allowed where evidence is provided that the indoor noise generated by the use itself exceeds the listed criteria.

3.2.4. Avigation Easement Dedication Requirements: Dedication of an Avigation Easement is required as a condition for approval of certain proposed development situated within the CNEL 60 dB contour in accordance with Policy 4.1.1 (see Maps 2 and 5).

3.3. Safety Compatibility

Safety Policy Background Information
The following Safety Policy Background Information (in different typeface) has been considered in formulating the Safety Compatibility policies and criteria in this section, but is provided for informational purposes only does not itself constitute ALUC policy. For additional discussion of safety compatibility concepts, see Appendix D.

Policy Objective
The intent of land use safety compatibility criteria is to minimize the risks associated with an off-airport aircraft accident or emergency landing. The policies focus on reducing the potential consequences of such events should they occur. Risks both to people and property in the vicinity of an airport and to people on board the aircraft are considered (land use features that can be the cause of an aircraft accident are addressed under Airspace Protection, Section 3.4).
Measures of Risk Exposure

This Compatibility Plan evaluates the risk that potential aircraft accidents pose to lands and people around the Airport in terms of two parameters: the likelihood of an accident occurring in a given location near the Airport; and the potential consequences if an accident occurs in that location.

- The accident likelihood is measured in terms of the geographic distribution of where accidents have historically occurred around other airports having similar types of activity. Because aircraft accidents are infrequent occurrences, the pattern of accidents at any one airport cannot be used to predict where future accidents are most likely to happen around that airport. Reliance must be placed on data about aircraft accident locations at comparable airports nationally, refined with respect to information about the types and patterns of aircraft use at the individual airport. This methodology, as further described in Appendix D, is used to delineate the safety zones depicted in Map 3, Compatibility Policy Map: Safety.

- The consequences component of the risk considers the number of people in harm’s way and their ability to escape harm. For most Nonresidential Development, potential consequences are measured in terms of the usage Intensity—the number of people per acre on the site. For Residential Development, Density—the number of dwelling units per acre—is substituted for Intensity. Additional criteria are applicable to specific types of uses.

Factors Considered in Setting Safety Compatibility Criteria

Factors considered in setting the criteria in this section include the following:

- The locations, delineated with respect to the Airport runway, where aircraft accidents typically occur near airports and the relative concentration of accidents within these locations. The most stringent land use controls are applied to the areas with the greatest potential accident exposure. The risk information utilized is the transport (air carrier) and general aviation accident data and analyses contained in the California Airport Land Use Planning Handbook. Department of Defense guidance regarding accident potential zones for military aircraft is considered as well.

- Handbook guidance is also used to delineate the safety zone boundaries for the Airport as depicted on Map 3, Compatibility Policy Map: Safety. The zone shapes and sizes reflect the existing and future runway length, approach categories, aircraft fleet mix, and normal flight patterns for the Airport. Specific factors considered in adjusting the generic Handbook zones to reflect the conditions at the Airport are indicated on the Safety Compatibility Factors map in Chapter 3.

- Handbook guidance regarding the maximum usage intensities (people per acre) considered acceptable is used for new development near airport runways.

- Residential Density limitations cannot be equated to the usage Intensity limitations for nonresidential uses. Consistent with pervasive societal views and as suggested by the Handbook guidelines, a greater degree of protection is warranted for residential uses.

- The presence of certain land use characteristics that represent safety concerns regardless of the number of people present; specifically: vulnerable occupants (children, elderly, disabled), hazardous materials, and critical community infrastructure.

- The extent to which development covers the ground and thus limits the options of where an aircraft in distress can attempt an emergency landing.

3.3.1. Evaluating Safety Compatibility for New Development: The safety compatibility of proposed land uses within the influence area of Sacramento International Airport shall be evaluated in accordance with the policies set forth in this section, including the criteria listed in Table 2, Safety Compatibility Criteria, and the safety zones depicted on Map 3, Compatibility Policy Map: Safety.
(a) The criteria in Table 2 indicate whether a particular type of land use is “normally compatible,” “conditional,” or “incompatible” with the exposure to Sacramento International Airport aircraft accident risks.

(b) “Normally Compatible” means that the proposed Land Use Action is presumed to comply with the indicated Intensity limits and other criteria for the zone. However, atypical examples of a use may require review to ensure compliance with the criteria.

(c) “Conditional” means that the proposed Land Use Action must comply with the conditions listed in the table.

(d) “Incompatible” means that proposed Land Use Action shall not be permitted under any normal circumstances within the indicated safety zone. Limited exceptions are possible for site-specific special conditions. See Policy 4.1.5.

3.3.2. Residential Development Criteria: Proposed Residential Development shall be evaluated in accordance with the following criteria:

(a) The Density of Residential Development shall be measured in terms of dwelling units per acre. The maximum allowable Densities in each safety zone are as follows. Exceptions are provided for existing single-family homes and residential lots (see Policy 1.4.3).

(1) Within Safety Zones 1, 2, and 5 new Residential Development shall be prohibited.

(2) Within Safety Zones 3 and 4, new Residential Development shall be limited to a maximum Density of 1 dwelling units per 10.0 acres (0.1 dwelling units per acre). Further, the dwelling itself shall not be located within the Safety Zones 3 or 4 boundaries.

(3) Within Safety Zone 6, new Residential Development shall be restricted to a sitewide average Density of no greater than 12.0 dwelling units per acre (i.e., the gross acreage of the project site).\(^\text{23}\)

(b) For Projects that are solely residential, the acreage evaluated equals the Project site size which may include multiple parcels. See Policy 3.3.8 with regard to mixed-use development.

(c) Density bonuses and other bonuses or allowances that Local Agencies may provide for affordable housing developed in accordance with the provisions of state and/or local law or regulation shall be included when calculating residential Densities. The overall Density of a development Project, including any bonuses or allowances, must comply with the allowable Density criteria in Table 2, Safety Compatibility Criteria.

(d) Secondary units, as defined by state and local law, shall be excluded from Density calculations.

(e) See Policy 1.4.3 regarding Residential Development by right on existing legal lots of record.

(f) In accordance with state law, a family day care home serving 14 or fewer children may be established in any existing dwelling or in any new dwelling permitted by the policies of this Compatibility Plan.

\(^{23}\) Note that the noise compatibility criteria in Section 3.2 also restrict Residential Development in within part of this Safety Zone.
3.3.3. Nonresidential Development Criteria: Proposed Nonresidential Development shall be evaluated in accordance with the following criteria:

(a) The usage Intensity (people per acre) limit indicated in Table 2 for each safety zone is the fundamental criterion against which the safety compatibility of most nonresidential land uses shall be measured. The Intensity limits set the total number of occupants allowed on the Project site during normal busy use. Other criteria may be applicable to uses of special concern (see Policy 3.3.7).

(b) All nonresidential uses, including uses listed in Table 2, Safety Compatibility Criteria, as “Normally Compatible,” must comply with both the “sitewide average” and “single-acre” usage Intensity limits indicated below and listed in Table 2 for each safety zone.

<table>
<thead>
<tr>
<th>Safety Zone</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maximum Sitewide Average Intensity</td>
<td>10</td>
<td>60</td>
<td>100</td>
<td>160</td>
<td>130</td>
<td>400</td>
</tr>
<tr>
<td>Maximum Single-Acre Intensity</td>
<td>20</td>
<td>120</td>
<td>250</td>
<td>480</td>
<td>390</td>
<td>1,200</td>
</tr>
</tbody>
</table>

(1) The “sitewide average” Intensity equals the total number of people expected to be on the entire site divided by the site size in acres (i.e., the gross acreage of the project site).

(2) The “single-acre” Intensity equals the number of people expected to occupy the most intensively used 1.0-acre area(s) of the site.

(c) The need to calculate the usage Intensity of a particular Project proposal for compliance with the Intensity criteria in the Paragraph (b) table is to be governed by the following:

(1) Land use categories indicated in Table 2 as “Normally Compatible” for a particular safety zone are presumed to meet the Intensity criteria indicated in the Paragraph (b) table. Unless the particular Project proposal represents an atypical example of the usage type, calculation of the usage Intensity is not required.

(2) Calculation of the usage Intensity must be done for all proposed Projects where the land use category for the particular safety zone is indicated in Table 2 as “Conditional” and the criteria column says “Ensure Intensity criteria are met.”

(3) Where Table 2 indicates that land use category is “Conditional” for the particular safety zone, but the criteria are other than “Ensure Intensity criteria are met,” calculation of the usage Intensity is not necessary for typical examples of the use. However, the Project proposal must comply with the other criteria listed for the applicable land use category and safety zone.

(d) No new structures intended to be occupied regularly are allowed in Safety Zone 1.

(e) Usage Intensity calculations shall include all people (e.g., employees, customers/visitors) who may be on the Project site at any single point in time, whether indoors or outdoors.
(1) For the purposes of these calculations, the total number of occupants during normal busiest periods shall be used.\textsuperscript{24}

(2) The Project site may be composed of multiple parcels.

(f) Each component use within a Nonresidential Development that has multiple types of uses shall comply with the safety criteria in Table 2, Safety Compatibility Criteria, unless the use is ancillary to the primary use.

(1) To be considered an Ancillary Use, the use must be associated with the primary use (e.g., a cafeteria in an office building) and occupy no more than 10% of total building floor area.

(2) Ancillary Uses must be considered in the sitewide average Intensity limits, but may be excluded from the single-acre Intensity calculations.

(3) An Ancillary Use may be more intensively occupied (more people in a given area) than the primary use, provided that the Ancillary Use is neither:

\begin{itemize}
  \item An assembly room having more than 750 square feet of floor area (this criterion is intended to parallel building code standards) and a capacity of 50 people; nor
  \item A K-12 school, day care center, or other risk-sensitive use that is “incompatible” within the safety zone where the primary use is to be located.
\end{itemize}

(g) Other criteria may be applicable to uses of special concern (see Policy 3.3.7 and conditions in Table 2, Safety Compatibility Criteria).

(h) Local Agencies may make exceptions for “Conditional” or “Incompatible” land uses associated with rare special events (e.g., an air show at the Airport) for which a facility is not designed and normally not used and for which extra safety precautions can be taken as appropriate.

3.3.4. \textit{Methodology for Determining Compliance with Sitewide Average Intensity Criteria:} Determination of compliance with the sitewide average Intensity criteria indicated in Policy 3.3.3(b) requires calculating the total occupancy of the site at any given time under normal busy use (see Policy 3.3.3(e)), then dividing by the total acreage of the Project site (see Exhibit 1). Alternatively, the Floor Area Ratio (FAR) criteria indicated in Table 2 for most nonresidential uses may be used. Additional guidance is found in Appendix E. Regardless of the method or methods used, the proposed Project's compliance with the Intensity criteria in Policy 3.3.3(b) must be demonstrated by the applicant or referring Local Agency.

(a) Floor Area Ratio (FAR) Criteria: Where a floor area ratio limit is cited in Table 2 as the condition to be met, the indicated numbers should be treated as a tool by which compliance with the usage Intensity criteria can be evaluated.

(1) The limit listed for each use is based upon a typical Occupancy Load Factor (floor area square footage per person) for that use. The allowable FAR in a particular safety zone thus varies from one land use category to another. The assumed Occupancy Load Factors are shown in the table.

\textsuperscript{24} This number will typically be lower than the absolute maximum number of occupants the facility can accommodate (such as would be used in determining compliance with building and fire codes).
(2) If a higher or lower Occupancy Load Factor can be documented for a particular Project (see Paragraph (b) of this policy), then the allowable FAR would be correspondingly lower or higher, but in all cases the basic usage Intensity criterion must be met.

(b) Alternative Methodologies for Calculation of Sitewide Average Usage Intensities: Application of the FAR methodology for determining compliance with usage Intensity criteria is not required. Usage intensities may also be determined by first calculating the total occupancy of the site. The following methods may be used to determine the total occupancy for any category of use. For Projects involving multiple nonresidential land

---

**Exhibit 1: Intensity Calculation Example**

In this example, both the sitewide and single-acre Intensity of a proposed warehouse facility is calculated using the common Occupancy Load Factors [number of square feet per person] information in Table 2, Safety Criteria together with Project specifications. The results are then compared with the maximum sitewide and single-acre Intensity limits in Table 2 to determine consistency of the Project with the safety criteria.

**Table 2 Safety Criteria Data**

<table>
<thead>
<tr>
<th>Safety Zone 3 Intensity Limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max. Sitewide Average: 100 people per acre</td>
</tr>
<tr>
<td>Max. Single-Acre: 250 people per acre</td>
</tr>
</tbody>
</table>

**Common Occupancy Load Factors**

- Office: approx. 215 s.f. per person
- Light Industrial, Low Intensity: approx. 350 s.f. per person
- Warehouse: approx. 1,000 s.f. per person

**Project Data**

- Site Acreage: 3 acres
- Office: 19,560 s.f.
- Light Industrial: 24,000 s.f.
- Warehouse: 65,000 s.f.

**Occupancy**

- Office: \( \frac{19,560 \text{ s.f.}}{215 \text{ s.f. per person}} = 91 \text{ people} \)
- Light Industrial: \( \frac{24,000 \text{ s.f.}}{350 \text{ s.f. per person}} = 69 \text{ people} \)
- Warehouse: \( \frac{65,000 \text{ s.f.}}{1,000 \text{ s.f. per person}} = 65 \text{ people} \)

**Total:** \( = 225 \text{ people} \)

**Intensity Results**

The results of the Intensity calculations indicate that the proposed development satisfies the sitewide and single-acre Intensity criteria.

**Sitewide Average Intensity**

- **Total people = 225 people**
- **Site Acreage = 3 acres**
  
  \( \text{Total people} = \frac{225 \text{ people}}{3 \text{ acres}} = 75 \text{ people per acre} \)

**Single-Acre Intensity**

- **Total people = 91 + 69 people**
- **Single-Acre = 1 acre**
  
  \( \text{Total people} = \frac{91 + 69 \text{ people}}{1 \text{ acre}} = 160 \text{ people per acre} \)
use categories, the occupancy for each use must be calculated separately, then added to produce the total occupancy. See Policy 3.3.8 for criteria pertaining to mixed-use Projects having both residential and nonresidential components.

(1) Fixed Seating: For uses with fixed seats, such as restaurants and theaters, the occupancy should be based upon the number of customer seats plus the number of employees.

(2) Occupancy Load Factors: The square footage of the building divided by the typical square footage occupied by each person yields the total occupancy. Table 2, Safety Compatibility Criteria, lists typical occupancy load factors for various land use categories.

(3) Vehicle Parking Requirements: For many commercial and industrial uses, the occupancy can be estimated by considering the number of parking spaces required by the Local Agency and multiplying by the average occupancy per vehicle. This method is not suitable for land uses where many users arrive on foot or by transit, bicycle, or other means of transportation (see Appendix E).

(4) Building and Fire Codes: This method is essentially the same as the Occupancy Load Factor method in that the codes provide a square footage per person for various types of building uses. Building and Fire Codes, though, are based on a maximum, never to be exceeded, number of occupants rather than the average busy period that is the basis for airport land use compatibility planning. As such, the total occupancy calculated using these codes must be reduced by some factor—approximately one half for most uses—to provide a number consistent with the Intensity limits listed in Policy 3.3.3(b).

(c) Projects Containing Mixed Nonresidential Uses: Where a proposed development will contain a mixture of the nonresidential uses listed separately in Table 2, the FAR values cannot be directly used as an evaluation tool unless each component use is to be situated on its own distinct site. Instead, it is necessary to apply the occupancy load factors or use other information to calculate the total number of occupants expected within the overall development. This number is then used to determine compliance with the usage Intensity criteria.

(1) See Policy 3.3.8 for mixed residential/nonresidential uses.

(2) See Policy 3.3.11 with regard to criteria for Project sites that occupy two or more safety zones.

(d) Selection of Calculation Method: When evaluating Major Land Use Actions referred for ALUC review on a mandatory basis in accordance with Policy 1.5.2, the ALUC shall normally use the Floor Area Ratio methodology (Paragraph (a) of this policy). Occupancy within a single acre shall normally be calculated as described in Policy 3.3.5. However, the ALUC shall consider usage Intensity data that the Local Agency or Project applicant has provided for the Project using an alternative calculation method.

(1) If the Local Agency or Project applicant provides definitive information that a particular Development Proposal is atypical—that is, there would be more floor area per person and thus a lower usage Intensity—the ALUC may consider that information in determining the safety compatibility of the proposal. In considering any such exceptions, the ALUC shall also take into account the potential for the use of a building to change over time (see Policy 3.3.6).
(2) In conjunction with modifying its general plan for consistency with this Compatibility Plan or as part of a separate ordinance or other adopted policy, a Local Agency may propose a particular method for measuring compliance with the usage Intensity limits. The ALUC shall evaluate the proposed method to determine whether it would provide an equivalent Intensity outcome to that of the floor area ratio method. Once the ALUC has determined that the general plan is consistent with this Compatibility Plan, referral of Major Land Use Actions to the ALUC becomes voluntary. Therefore, subject to ALUC acceptance of the alternative calculation method, the Local Agency may then use that method when internally reviewing individual development Projects for compliance with the usage Intensity criteria.

3.3.5. Methodology for Calculation of Single-Acre Intensity: The single-acre Intensity of a proposed development shall be calculated by determining the total number of people expected to be within any 1.0-acre portion of the site, typically the most intensively used building or part of a building. Calculation of the single-acre Intensity depends upon the building footprint and site sizes and the distribution of activities on the site.

(a) For sites less than 1.0 acre, the single-acre Intensity equals the total number of people on the site divided by the site size.

(b) For sites more than 1.0 acre and a building footprint less than 1.0 acre, the single-acre Intensity equals the total number of building occupants unless the Project includes substantial outdoor occupancy, in which case such usage should be taken into account.

(c) For sites having both site size and building footprint of more than 1.0 acre, the single-acre Intensity shall normally be calculated as the total number of building occupants divided by the building footprint in acres. This calculation assumes that the occupancy of the building is evenly distributed. However, if the occupancy of the building is concentrated in one area—the office area of a large warehouse, for example—then the occupants of that area shall be included in the single-acre calculation.

(d) The 1.0-acre areas to be evaluated shall normally match the building footprints provided that the buildings are generally rectangular (reasonably close to square) and not elongated in shape and, for buildings larger than 1.0 acre, may represent a portion of the building.

(e) If a building has multiple floors, then the total number of occupants on all floors falling within the 1.0-acre footprint shall be counted.

3.3.6. Long-Term Changes in Occupancy: In evaluating compliance of a proposed Nonresidential Development with the usage Intensity criteria, the ALUC shall take into account the potential for the use of a building to change over time. A building could have planned low-Intensity use initially, but later be converted to a higher-Intensity use. Local Agencies must provide permit language or other mechanisms to ensure continued compliance with the usage Intensity criteria. (Note that this provision applies only to new development and Redevelopment—Projects for which discretionary Local Agency action is required—not to tenant improvements or other changes to existing buildings for which local approval is ministerial.)

---

25 For example, a method based upon the Local Agency’s parking space requirements may be used together with an assumed number of people per vehicle as a means of determining the number of occupants for uses that are vehicle oriented.
3.3.7. Land Uses of Special Concern: Certain types of land uses represent special safety concerns irrespective of the number of people associated with those uses.

(a) Land uses of particular concern and the nature of the concern are:

1. Uses Having Vulnerable Occupants: These uses are ones in which the majority of occupants are children, elderly, and/or disabled—people who have reduced effective mobility or may be unable to respond to emergency situations. The primary uses in this category are:
   - Children’s schools (grades K–12).
   - Day care centers (facilities with 15 or more children, as defined in the California Health and Safety Code).
   - Hospitals, mental hospitals, nursing homes, and similar facilities where patients remain overnight.
   - Congregate care facilities including retirement homes, assisted living, and intermediate care facilities.
   - Penal institutions.

2. Hazardous Materials Storage: Materials that are flammable, explosive, corrosive, or toxic constitute special safety compatibility concerns to the extent that an aircraft accident could cause release of the materials and thereby pose dangers to people and property in the vicinity. Facilities in this category include:
   - Facilities such as oil refineries and chemical plants that manufacture, process, and/or store bulk quantities of hazardous materials generally for shipment elsewhere.
   - Facilities associated with otherwise compatible land uses where hazardous materials are stored in smaller quantities primarily for on-site use.

3. Critical Community Infrastructure: This category pertains to facilities the damage or destruction of which would cause significant adverse effects to public health and welfare well beyond the immediate vicinity of the facility. Among these facilities are:
   - Public safety facilities such as police and fire stations.
   - Communications facilities including emergency communications, broadcast, and cell phone towers.
   - Primary, peaker, and renewable energy power plants, electrical substations, and other utilities.

(b) The safety criteria for the land uses in Paragraph (a) of this policy are included in Table 2, Safety Compatibility Criteria. These criteria shall be applied when evaluating these uses.

1. In some cases, these uses are not allowed in portions of the Airport environs regardless of the number of occupants associated with the use.

2. In other instances these uses should be avoided (that is, allowed only if a site outside the zone would not serve the intended function).

3. When allowed, special measures for the particular use, such as those listed in Table 2, Safety Compatibility Criteria, must be taken as appropriate to minimize hazards to the facility and occupants if the facility were to be struck by an aircraft.

3.3.8. Mixed-Use Development: For Projects involving a mixture of residential and nonresidential uses, the following policies apply:
(a) Where the Residential Development and Nonresidential Development are proposed to be situated on separate parts of the Project site, the Project shall be evaluated as separate developments. The residential Density shall be calculated with respect to the area(s) to be devoted to Residential Development and the nonresidential Intensity calculated with respect to the area(s) proposed for nonresidential uses. This provision means that the residential Density cannot be averaged over the entire Project site when nonresidential uses will occupy some of the area. The same limitation applies in reverse—that is, the nonresidential Intensity cannot be averaged over an area that includes residential uses.

(b) Development in which Residential Development is proposed to be located in conjunction with Nonresidential Development in the same or nearby buildings on the same site must meet both residential Density and nonresidential Intensity criteria. The number of dwelling units shall not exceed the Density limits indicated in Table 2, Safety Compatibility Criteria. Additionally, the normal occupancy of the residential portion shall be added to that of the nonresidential portion and the total occupancy shall be evaluated with respect to the nonresidential usage Intensity criteria cited in Table 2.

(c) Mixed-use development shall not be allowed where the residential component would be exposed to noise levels above the limits set in Table 1, Noise Compatibility Criteria.

3.3.9. Limits on Clustering: As used in this Compatibility Plan, “clustering” refers to the concentration of development (measured in terms of dwellings or people per acre) into a portion of the site, leaving other portions of the site relatively less developed or as open land. To a degree, clustering of development can be desirable from an airport land use safety compatibility perspective if more places where an aircraft can attempt an emergency landing potentially remain. However, clustering can pose greater risks that an aircraft could strike the location where the development is clustered. To guard against this risk, limitations on the maximum concentrations of dwellings or people in a small area of a large Project site are appropriate.

(a) Clustering of new Residential Development in the Sacramento International Airport environs is limited as follows:

(1) Clustering is not applicable in Safety Zones 1, 2, and 5 as new Residential Development is not permitted in these zones.

(2) In Safety Zones 3 and 4, up to 2 dwellings may be built in a single acre area, provided that the average Density of the development does not exceed 1 dwelling unit per 10.0 acres. Where new Residential Development is allowed as Infill in these zones, the single-acre Density shall not exceed that typical of the surrounding development and in no case shall exceed 8 dwelling units per acre.

(3) There is no limit on site-wide or single-acre residential Densities in Safety Zone 6.

(b) For nonresidential land uses, the usage Intensity on a single 1.0-acre portion of a Project site shall not exceed the limits specified in Table 2.

(c) For the purposes of the above policies, the 1.0-acre areas to be evaluated shall be rectangular (reasonably close to square, not elongated or irregular) in shape.

3.3.10. Lot Coverage Limits: In addition to the single-acre Density and Intensity limits set by Policy 3.3.9, new residential and Nonresidential Development shall also be limited with respect to lot coverage—the percentage of the Project site covered by buildings. The specific limits for each safety zone are as shown in Table 2.
3.3.11. **Parcels Lying within Two or More Safety Zones:** For the purposes of evaluating consistency with the compatibility criteria set forth in Table 2, any parcel that is split by safety zone boundaries shall be considered as if it were multiple parcels divided at the safety zone boundary line (see Exhibit 2).

![Exhibit 2: Site Split by Safety Zones](image)

**Exhibit 2: Site Split by Safety Zones**

In this example, the restaurant and office uses are split between Safety Zones 4 and 6. When determining compliance with the Zone 4 Intensity limits, only the portions of the uses in Zone 4, together with the retail use that is fully in Zone 4 are considered and the site size is the 3.5 acres in Zone 4.

**Safety Zone 4**

- **Retail:**
  - 50,000 s.f. = 294 people
  - 170 s.f. per person

- **Restaurant:**
  - 50% of 18,000 s.f. = 150 people
  - 60 s.f. per person

- **Office:**
  - 50% of 24,000 s.f. = 56 people
  - 215 s.f. per person

**Total Occupancy:**

- 500 people

**Intensity:**

- \( \frac{500 \text{ people}}{3.5 \text{ acres}} = 143 \text{ people/acre}^* \)

* Meets Zone 4 sitewide average limit of 160 people/acre

**Safety Zone 6**

All proposed uses are normally compatible.

(a) The preceding notwithstanding, where no part of the building(s) or areas of outdoor congregation of people proposed on the Project site falls within the more restrictive safety zone, the criteria for the safety zone where the proposed building(s) or outdoor uses are located shall apply.

(b) Modification of the Project site plan so as to transfer the allowed Density of Nonresidential Development or Intensity of Nonresidential Development from the more restricted portion to the less restricted portion is encouraged. The purpose of this policy is to move people outside of the higher-risk zones.

1. This full or partial reallocation of Intensity is permitted even if the resulting Intensity in the less restricted area would then exceed the sitewide average Intensity limits that apply within that safety zone (see Exhibit 3).

2. The single-acre criterion for the zone to which the use is transferred must still be satisfied.

![Exhibit 3: Transferring Usage Intensity](image)

**Exhibit 3: Transferring Usage Intensity**

An example of transferring usage Intensity to the less restrictive safety zone is provided below.

**Project Site**

- Zone 3: 1.0 acres
- Zone 4: 2.0 acres

**Allowable Total Occupancy**

- Zone 3: 100 people/acre = 100 people
- Zone 4: 160 people/acre = 320 people
- Total Allowed on Site: 420 people

**Transfer People from Zone 3 to Zone 4**

- Zone 3: 0 people
- Zone 4: 320 + 100 = 420 people

* 420 people in 2.0 acres exceeds 160 people/acre limit for Zone 4, but is allowable under usage Intensity transfer policy
3.3.12. **Avigation Easement Dedication Requirements:** Dedication of an *Avigation Easement* is required as a condition for approval of certain proposed development situated within Safety Zones 1 through 5 in accordance with Policy 4.1.1 (see Maps 3 and 5).

### 3.4. Airspace Protection

**Airspace Protection Policy Background Information**

The following Airspace Protection Policy Background Information (in different typeface) has been considered in formulating the Airspace Protection Compatibility policies and criteria in this section, but is provided for informational purposes only and does not itself constitute *ALUC* policy. For additional discussion of airspace protection concepts, see Appendix D.

**Policy Objective**

Airspace protection compatibility policies seek to prevent creation of land use features that can pose hazards to the airspace required by aircraft in flight and have the potential for causing an aircraft accident.

**Measures of Hazards to Airspace**

Three categories of hazards to airspace are a concern: physical, visual, and electronic.

- **Physical** hazards include tall structures that have the potential to intrude upon protected airspace as well as land use features that have the potential to attract birds and certain other potentially hazardous wildlife to the Airport area.
- **Visual** hazards include certain types of lights, sources of glare, and sources of dust, steam, or smoke.
- **Electronic** hazards are ones that may cause interference with aircraft communications or navigation.

**Factors Considered in Setting Airspace Protection / Object Height Compatibility Criteria**

The *Compatibility Plan* airspace protection policies rely upon the regulations and standards enacted by the Federal Aviation Administration (FAA) and the State of California. The FAA has well defined standards by which potential hazards to flight, especially airspace obstructions, can be assessed. The following FAA regulations and documents, and any later versions of these documents, are specifically relevant.

- FAA Advisory Circular 150/5300-13, *Airport Design* (provides standards regarding safety-related areas in the immediate vicinity of runways).
- Advisory Circular 70/7460-1K, *Obstruction Marking and Lighting* (sets standards for how essential marking and lighting should be designed).

These regulations and standards do not give the FAA authority to prevent the creation of hazards to flight. That authority rests with state and local government. The State of California has enacted regulations enabling state and Local Agencies to enforce the FAA standards. The *ALUC* policies are intended to help implement the federal and state regulations.

**Factors Considered in Setting Airspace Protection / Wildlife Hazard Compatibility Criteria**

Natural features and agricultural practices near Sacramento International Airport include open water and food sources that are attractive to wildlife, especially waterfowl and other bird species. FAA data indicates that aircraft using the Airport have experienced a high incidence of bird strikes compared to other airports nationwide (see discussion in Appendix F). The *Compatibility Plan* relies upon the wildlife hazard guidelines established by the FAA in the following Advisory Circulars:
3.4.1. Evaluating Airspace Protection / Object Height Compatibility for New Development: The object height compatibility of proposed land uses within the influence area of Sacramento International Airport shall be evaluated in accordance with the policies in this section, including the Airspace Protection Surfaces depicted on Maps 4a, 4b, and 4c, Compatibility Policy Maps: Airspace Protection / Object Heights.

(a) The airspace protection / height limit surfaces are drawn in accordance with FAR Part 77, Subpart C, and reflect the runway lengths, runway end locations, and approach types for each of the three runway configuration scenarios: existing, north-only extension of east runway, and split extension of east runway. Maps 4a, 4b, and 4c depict the approach protection / height limit surfaces for these respective scenarios.

(b) The Critical Airspace Protection Zone consists of the FAR Part 77 primary surface and the area beneath portions of the approach and transitional surfaces to where these surfaces intersect with the horizontal surface.

3.4.2. Object Height Criteria: The criteria for determining the acceptability of a Project with respect to height shall be based upon the standards set forth in Federal Aviation Regulations (FAR) Part 77, Subpart C, Safe, Efficient Use and Preservation of the Navigable Airspace and applicable airport design standards published by the FAA. Additionally, where an FAA aeronautical study of a proposed object is required as described in Policy 3.4.5, the results of that study shall be taken into account by the ALUC and the Local Agency.

(a) Except as provided in Paragraphs (b) and (c) of this policy, no object, including a mobile object such as a vehicle or temporary object such as construction crane, shall have a height that would result in penetration of an Airspace Protection Surface depicted for Sacramento International Airport on Maps 4a, 4b, or 4c. Any object that penetrates one of these surfaces is, by FAA definition, deemed an obstruction.26

(b) Objects not situated within a Critical Airspace Protection Zone (see Policy 3.4.1(b)) may be allowed to have heights that penetrate the Airspace Protection Surfaces defined by FAR Part 77 criteria.

(1) The maximum allowable height for these objects is 35 feet above ground level.

(2) The height of all objects is subject to Local Agency zoning limits.

(c) Unless exempted under Paragraph (b) of this policy, a proposed object having a height that exceeds the Airport’s Airspace Protection Surface shall be allowed only if all of the following apply:

---

26 An obstruction may or may not be a hazard. The purpose of FAA aeronautical studies is to determine whether an obstruction is a hazard and, if so, what remedy is recommended. The FAA’s remedies are limited to making changes to the airspace and an airport’s approach procedures, but it also can indicate an objection to proposed structures that it deems to be a hazard.
(1) As the result of an aeronautical study, the FAA determines that the object would not be a hazard to air navigation.

(2) FAA or other expert analysis conducted under the auspices of the ALUC or SCAS as Airport owner concludes that, despite being an airspace obstruction (not necessarily a hazard), the object would not cause any of the following:
   - An increase in the ceiling or visibility minimums of the Airport for an existing or planned instrument procedure (a planned procedure is one that is formally on file with the FAA);
   - A diminution of the established operational efficiency and capacity of the Airport, such as by causing the usable length of the runway to be reduced; or
   - Conflict with the visual flight rules (VFR) airspace used for the Airport traffic pattern or en route navigation to and from the Airport.

(3) Marking and lighting of the object will be installed as directed by the FAA aeronautical study or the California Division of Aeronautics and in a manner consistent with FAA standards in effect at the time the construction is proposed.27

(4) An Avigation Easement is dedicated, in accordance with Policy 4.1.1, to the County of Sacramento as owner of the Airport.

(5) The proposed Project/plan complies with all policies of this Compatibility Plan related to noise and safety compatibility.

3.4.3. Evaluating Airspace Protection / Wildlife Hazard Compatibility for New Development: The foundation for regulation of land uses that could attract hazardous wildlife on and near airports is set by the federal government.28 The ALUC’s role and policy with regard to regulating wildlife hazards in the Airport environs is limited to new development as well as general plans, specific plans, master plans, and zoning ordinances that set standards for new development. The ALUC has no authority to regulate Existing Land Uses, including agriculture, even if these uses include land use characteristics that attract hazardous wildlife.29

(a) Any proposed Land Use Project that could attract wildlife to the Airport Influence Area is a potential concern. Federal regulations and guidelines referred to above identify specific land uses that the federal government deems incompatible near airports.

(b) Crop selection and other routine agricultural activities that do not involve construction or otherwise constitute a Land Use Project and do not need Local Agency approval are not subject to ALUC authority and are not regulated by the policies of this Compatibility Plan.

(c) For proposed Land Use Projects to be located within 10,000 feet of the Sacramento International Airport Air Operations Area (AOA; see Map 5) and that include a zoning amendment and that could attract hazardous wildlife, the project proponent shall doc-

---

27 Advisory Circular 70/7460-1J, Obstruction Marking and Lighting, or any later FAA guidance.
28 See Code of Federal Regulations, Title 14, Part 139, Certification of Airports, Section 139.337 – Wildlife Hazard Management. FAA policy implementing these regulations is expressed in a variety of documents, but primarily resides in Advisory Circular 150/5200-33B, Hazardous Wildlife Attractants on or Near Airports, as periodically amended.
29 See Appendix F for a discussion of wildlife hazards at Sacramento International Airport and the role of the ALUC and SACOG, separate from the policies in this Compatibility Plan, in addressing those hazards.
document consideration of current FAA or other federal regulations and guidelines pertaining to hazardous wildlife attractants.  

(d) Elsewhere within the *Airport Influence Area*, but beyond 10,000 feet from the AOA, or for projects within 10,000 feet from the AOA that do not include a zoning amendment, a formal *Project* review and compatibility determination by the *ALUC* shall not be required. It is recommended that the project proponent consider current FAA or other federal regulations and guidelines pertaining to hazardous wildlife attractants.

3.4.4. *Other Flight Hazards*: Land uses that may cause visual or electronic hazards, to aircraft in flight or taking off or landing at the *Airport* shall be allowed within the *Airport Influence Area* only if the uses are consistent with FAA rules and regulations.

(a) Specific characteristics to be avoided, especially within areas beneath the *Airspace Protection Surfaces* (see Map 5), include:

1. Sources of glare (such as from mirrored or other highly reflective buildings or building features) or bright lights (including search lights and laser light displays);
2. Distracting lights that could be mistaken for airport lights;
3. Sources of dust, steam, or smoke that may impair pilots’ vision;
4. Sources of steam or other emissions that cause thermal plumes or other forms of unstable air; and
5. Sources of electrical interference with aircraft communications or navigation.

(b) To resolve any uncertainties with regard to the significance of the above types of flight hazards, *Local Agencies* should consult with FAA and Sacramento International Airport officials.

3.4.5. *Requirements for FAA Notification of Proposed Construction or Alteration*: Project proponents are responsible for notifying the FAA about proposed construction that may affect navigable airspace. The following is *ALUC* policy on this topic:

---

30 For a detailed description of these uses and design guidelines for minimizing wildlife attraction, see FAA Advisory Circular 150/5200-33B, *Hazardous Wildlife Attractants on or Near Airports*, or newer FAA guidance on wildlife attractants.

31 ibid

32 FAR Part 77 requires that a *Project* proponent submit notification of a proposal to the FAA where required by the provisions of FAR Part 77, Subpart B. California Public Utilities Code Sections 21658 and 21659 likewise includes this requirement. FAA notification requirements apply to all objects including structures, antennas, trees, mobile objects, and temporary objects such as construction cranes. The FAA will conduct an “aeronautical study” of the object(s) and determine whether the object(s) would be of a height that would constitute a hazard to air navigation. (See Appendix C of this Compatibility Plan for a copy of FAR Part 77 and online procedures for filing Form 7460-1.) FAA notification is required under the following circumstances:

(a) The *Project* contains proposed structures or other objects that exceed the height standards defined in FAR Part 77, Subpart B. Objects shielded by nearby taller objects are exempted in accordance with FAR Part 77, Paragraph 77.15. Note that notification to the FAA under FAR Part 77, Subpart B, is required even for certain proposed construction that does not exceed the height limits allowed by Subpart C of the regulations. Also, the FAA notification area extends beyond the *Airport Influence Area* depicted on Map 1, *Airport Influence Area*. For Sacramento International Airport, the Subpart B notification airspace surface extends outward and upward at a slope of 100 to 1 for a horizontal distance of 20,000 feet from the nearest point on any runway.

(b) Any proposal for construction or alteration of a structure, including antennas, taller than 200 feet above the ground level at the site regardless of proximity to any airport.
(a) The boundary of the FAA notification area for Sacramento International Airport is depicted on Maps 4a, 4b, and 4c. Reference to FAA notification requirements is included here for informational purposes only, not as an ALUC policy.

(b) Local Agencies should inform Project proponents of the requirements for notification to the FAA.

(c) Any proposed development Project that includes construction of a structure or other object and that is required to be submitted to the ALUC for a consistency review in accordance with Policy 1.5.2 shall include a copy of the completed FAR Part 77 notification form (Form 7460-1) submitted to the FAA, if applicable, and of the resulting FAA findings from its aeronautical study (i.e., notice of determination letter). A proposed Project may be referred to the ALUC in advance of the completion of the FAA aeronautical study. However, the completed aeronautical study must be forwarded to the ALUC when available and the ALUC may reconsider its previous consistency determination if the FAA study provides new information and airspace protection was a factor in the ALUC’s determination.

3.4.6. ALUC Review: The requirement for notification to the FAA shall not by itself trigger an airport compatibility review of an individual Project by the ALUC. If the general plan of the Local Agency in which the Project is to be located has been determined by the ALUC to be consistent with this Compatibility Plan, then no ALUC review is required. If the general plan has not been made consistent, then the proposed Project must be referred to the ALUC for review if it qualifies as a Major Land Use Action (see Policy 1.5.2).

3.5. Overflight Compatibility

Overflight Policy Background Information

The following Overflight Compatibility Policy Background Information (in different typeface) has been considered in formulating the Overflight Compatibility policies and criteria in this section, but is provided for informational purposes only and does not itself constitute ALUC policy. For additional discussion of overflight compatibility concepts, see Appendix D.

Policy Objective

Noise from individual aircraft operations, especially by comparatively loud aircraft, can be intrusive and annoying in locations beyond the limits of the noise exposure areas addressed by the policies in Section 3.2. Sensitivity to aircraft overflight varies from one person to another.

The policies in this section serve primarily to establish the form and requirements for notification about airport proximity and aircraft overflight to be given in conjunction with Local Agency approval of new Residential Development and with certain real estate transactions involving existing Residential Development. Overflight policies do not apply to Nonresidential Development.

Measures of Overflight Exposure

The loudness and frequency of occurrence of individual aircraft noise events are key determinants of where airport proximity and aircraft overflight notification is warranted. Single-event noise levels are especially important in areas that are overflown regularly by aircraft, but that do not produce significant CNEL contours.

Of particular concern are the areas beneath the flight routes of military aircraft that often conduct flight training at Sacramento International Airport. Although the number of these operations is not high enough to significantly affect the projected cumulative (CNEL) noise contours, these aircraft are very noisy compared to civilian aircraft. This activity is expected to continue indefinitely and the individual noise levels will continue
to be loud enough to disrupt outdoor activities when the military aircraft fly over. Moreover, the areas affected include locations not regularly overflown by civilian aircraft.

Also of concern are areas beneath the concentrated flight routes of air carrier jet aircraft. Although not as loud as military aircraft, the frequency of these flights can be annoying when outdoor activities are disrupted. Locations where aircraft regularly fly at an altitude of 3,000 feet or less above the ground are considered to be within the overflight impact area of Sacramento International Airport.

Factors Considered in Setting Overflight Compatibility Criteria

Factors considered in establishing overflight criteria include the following:

- The boundary of the overflight area for the Airport, as depicted on Map 6, Compatibility Policy Map: Overflight, is drawn to encompass locations where aircraft approaching and departing the Airport typically fly at an altitude of less than approximately 3,000 feet above the Airport elevation. Note that the flight altitude above ground level will be more or less than this amount depending upon the terrain below. Areas of high terrain beneath the traffic patterns are exposed to comparatively greater noise levels, a factor that is considered in the overflight policies.

- To be most effective, overflight policies should establish notification requirements for transactions involving Existing Land Uses, not just future development. However, the ALUC only has authority to set requirements for new development and to define the boundaries within which airport proximity disclosure in conjunction with real estate transactions should be provided as specified under state law.

- State airport proximity disclosure law applies to existing development, but not to all transactions. [California state statutes (Business and Professional Code Section 11010 and Civil Code Sections 1102.6, 1103.4, and 1353) require that, as part of many residential real estate transactions, information be disclosed regarding whether the property is situated within an Airport Influence Area. These state requirements apply to the sale or lease of newly subdivided lands and condominium conversions and to the sale of certain existing residential property. In general, Airport Proximity Disclosure is required with existing residential property transfer only when certain natural conditions (earthquake, fire, or flood hazards) warrant disclosure.]

3.5.1. Evaluating Overflight Compatibility: Unlike the function of the noise, safety, and airspace protection compatibility policies in this Compatibility Plan, the overflight compatibility policies set forth in this section do not restrict the manner in which land can be developed or used. The policies in this section serve primarily to establish the form and requirements for notification about airport proximity and aircraft overflights to be given in conjunction with Local Agency approval of new development and with certain real estate transactions involving existing development. The boundaries of the overflight zones around Sacramento International Airport are shown on Map 6, Compatibility Policy Map: Overflight.

3.5.2. Recorded Overflight Notification: As a condition for Local Agency discretionary approval of residential land use development within the secondary approach area indicated on Map 6, an overflight notification shall be recorded.

(a) The notification shall be of a format similar to that indicated in Appendix H and shall contain the following language dictated by state law with regard to Airport Proximity Disclosure in conjunction with real estate transfer:

NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associa-
ated with the property before you complete your purchase and determine whether they are acceptable to you.

(b) The notification shall be evident to prospective purchasers of the property and shall appear on the property deed.

(c) A separate Recorded Overflight Notification is not required where an Avigation Easement is provided.

(d) Recording of an Overflight Notification is not required for Nonresidential Development.

3.5.3. Airport Proximity Disclosure: State law requires that notice disclosing information about the presence of a nearby airport be given to prospective buyers of certain residential real estate within an Airport Influence Area. The statutes define an Airport Influence Area as “the area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses as determined by an airport land use commission.”

ALUC policy with regard to Airport Proximity Disclosure is as follows:

(a) For existing residences:
   (1) State law indicates that the ALUC is responsible for delineating the area within which Airport Proximity Disclosure is appropriate. The recommended Airport Proximity Disclosure area for Sacramento International Airport is identified on Map 6 in this chapter and includes the entire Airport Influence Area.

   (2) To the extent that real estate transactions involve existing residences, Airport Proximity Disclosure is a matter between private parties. The ALUC has no authority to mandate that Airport Proximity Disclosure be provided and neither the ALUC nor Local Agencies have any enforcement responsibilities.

   (3) Airport Proximity Disclosure should be provided as part of all real estate transactions (sale, lease, or rental) involving residential property anywhere within the Airport Influence Area.

(b) For proposed Residential Development:

   (1) The disclosure provisions of state law are deemed mandatory for new Residential Development anywhere within the Airport Influence Area and shall continue in effect as ALUC policy even if the state law is made less stringent or rescinded. The disclosure shall be of a format similar to that indicated in Appendix H and shall contain the language dictated by state law (see Policy 3.5.2(a)).

   (2) Signs providing the above notice and a map of the Airport Influence Area shall be prominently posted in the real estate sales office and/or other key locations at any new Residential Development within the Airport Influence Area.

3.5.4. Residential Development Suitability: Residential land uses are particularly sensitive to the noise associated with frequent or loud aircraft overflights. These overflight impacts extend to areas beyond the limits of the cumulative noise impacts defined by the CNEL contours that provide the basis for the noise compatibility policies in Section 3.2. At Sacramento International Airport, the most prominent of these impacts is associated with military air-

33 See California Business and Professions Code Section 11010(b) and Civil Code Section 1353(a).
craft activity in the Traffic Pattern Areas east and west of the Airport. Compatibility Plan policy regarding new Residential Development in these areas is as follows:

(a) Residential Development is not restricted within the Traffic Pattern Area and is not inconsistent with the policies of this Compatibility Plan except as dictated by noise, safety, and airspace protection policies that affect portions of the same area.

(b) To the extent that residential is the most practical land use for the area, multi-family residential—subject to the Density limits set by safety compatibility policies—is preferable to single-family.

(c) Any new Residential Development within the Traffic Pattern Area shall incorporate sound attenuation features sufficient to ensure an exterior to interior noise level reduction of at least 25 dBA with windows closed.

(d) New Residential Development shall be conditioned upon dedication of an Avigation Easement to the County of Sacramento if required under Policy 4.1.1.

4. Other Compatibility Policies

4.1. Policies for Special Circumstances

4.1.1. Avigation Easement Dedication: As a condition for approval of Projects that are subject to the review provisions of this Compatibility Plan and that meet the conditions in Paragraphs (a) and (b) of this policy, the property owner shall be required to dedicate an Avigation Easement to the County of Sacramento as owner of Sacramento International Airport.

(a) Avigation easement dedication is required for all off-airport Projects situated within the following portions of the Sacramento International Airport Influence Area as depicted on Map 6:

(1) All locations within the Primary Approach Area. This area is comprised of:
   - All locations within the CNEL 60 dB contour depicted on Map 2.
   - All locations within Safety Zones 1 through 5 as depicted on Map 3.
   - All locations within the Critical Airspace Protection Zone as depicted on Maps 4a, 4b, or 4c.

(2) All locations within the Traffic Pattern Area. This area is comprised of:
   - All locations with Safety Zone 6 as depicted on Map 3.
   - Other locations regularly overflown by civilian or military aircraft at an altitude of approximately 2,000 feet or less while approaching, departing, or engaged in flight training at the Airport.

(b) Avigation Easement dedication shall be required for any proposed development, including Infill development, for which discretionary local approval is required. Avigation Easement dedication is not required for ministerial approvals such as building permits. Further, unless previously required prior to the Effective Date of this Compatibility

---

34 Multi-family residential typically has less outdoor living, fewer outside walls through which noise can intrude, and higher ambient noise levels compared to single-family residential.
Plan, the requirement to dedicate an Avigation Easement shall not be applicable to Existing Land Uses located within the area where dedication is required for new land use Projects.

(c) The Avigation Easement shall:
   (1) Provide the right of flight in the airspace above the property;
   (2) Allow the generation of noise and other impacts associated with aircraft over-flight;
   (3) Restrict the height of structures, trees and other objects in accordance with the policies in Section 3.4 and Maps 4a, 4b, or 4c herein;
   (4) Permit access to the property for the removal or aeronautical marking of objects exceeding the established height limit (if not accomplished by the property owner, these actions can be taken by the Airport at the property owner’s expense); and
   (5) Prohibit electrical interference, glare, and other potential hazards to flight from being created on the property.

(d) An example of an Avigation Easement is provided in Appendix H.

4.1.2. Infill: Where land uses not in conformance with the criteria set forth in this Compatibility Plan exist at the time of the plan’s adoption, Infill development of similar land uses may be allowed to occur in that area even if the proposed new land use is otherwise incompatible with respect to the compatibility criteria for that location.

(a) Infill development is not permitted in the following locations.
   (1) Within Safety Zone 1 (the runway protection zones and within the runway primary surface), Infill development is not applicable as this zone is fully contained on Airport property.
   (2) Within Safety Zones 2 through 5, residential Infill development shall not be permitted except as allowed by Policy 1.4.3 regarding existing residential parcels.
   (3) Within the CNEL 65 dB noise contour as depicted on Map 2, Compatibility Policy Map: Noise, residential Infill development shall not be allowed.

(b) In other locations within Referral Area 1, a Project site can be considered for Infill development if it either:
   (1) Is part of a cohesive area, defined by the local land use jurisdiction and accepted by the ALUC, within which at least 65% of the uses were developed prior to the Compatibility Plan adoption with uses not in conformance with the plan; or
   (2) Meets all of the following conditions:
      ‣ At least 65% of the site’s perimeter is bounded (disregarding roads) by existing (as of the Effective Date of this Compatibility Plan) uses similar to, or more intensive than, those proposed;
      ‣ An individual Project site within an identified Infill area must be no larger than 20 acres;
      ‣ The proposed Project would not extend the perimeter of the area defined by the surrounding, already developed, incompatible uses; and

35 The effect of this policy is that Infill Residential Development is allowed at a 5 dB higher noise level than is the acceptable limit for other new Residential Development as set by Policy 3.2.2(a).
Land uses proposed for the Infill area are consistent with the Local Agency’s zoning regulations governing the existing, already developed, surrounding area.

(c) The Density of Infill Residential Development within the CNEL 60 to 65 dB noise contour range as depicted on Map 2, Compatibility Policy Map: Noise shall be limited in accordance with the safety compatibility policies applicable to the Project site. To the extent that Infill Residential Development is planned within this Noise Impact Area, multi-family—subject to the Density limits set by safety compatibility policies—is preferred over single-family (see Policy 3.5.4(b)).

(d) For Infill Nonresidential Development, the average usage Intensity (the number of people per acre) of the site’s proposed use shall not exceed the lesser of:

1. The median Intensity of all existing nonresidential uses that lie fully or partially within a distance of 1,000 feet from the boundary of the defined Infill area; or
2. Double the Intensity permitted in accordance with the criteria for that location as indicated in Table 2.

(For example, if the zone allows 100 people per acre and the median of nearby Existing Land Uses is 150 people per acre, the Infill development would be limited to 150 people per acre rather than 200.)

(e) The single-acre Density and Intensity limits described in Policies 3.3.9 and listed in Table 2 are applicable to Infill development. Also, the sound attenuation and Avigation Easement dedication requirements set by Policies 3.2.3 and 4.1.1 shall apply to Infill development.

(f) The ALUC prefers that all parcels eligible for Infill be identified at one time by the Local Agency.

1. The Local Agency is responsible for identifying, in its general plan or other adopted planning document approved by the ALUC, the qualifying locations that lie within that Local Agency’s boundaries. This action may take place in conjunction with the process of amending a general plan for consistency with the ALUC plan or may be submitted by the Local Agency for consideration by the ALUC at the time of initial adoption of this Compatibility Plan.

2. If a map identifying locations suitable for Infill has not been submitted by the Local Agency and approved by the ALUC or the site of an individual Project proposal does not fall within the identified Infill area, the ALUC may evaluate the Project to determine whether it would meet the qualifying conditions listed in Paragraphs (a) and (b) of this policy.

3. In either case, the burden for demonstrating that an area or an individual site qualifies as Infill rests with the affected Local Agency and/or Project proponent and is not the responsibility of the ALUC.

4.1.3. Existing Nonconforming Uses: Proposed changes to Existing Land Uses that are not in conformance with the compatibility criteria in this Compatibility Plan are subject to ALUC review if the changes would result in increased nonconformity with the compatibility criteria. Proposed changes, whether to a parcel or building, are limited as follows:

36 Note that Sacramento County policy prohibits new residential development within the CNEL 60 dB contour.
(a) Residential uses:

1. A Nonconforming residential land use may be continued, sold, leased, or rented without ALUC restriction or review.

2. A Nonconforming single-family dwelling may be maintained, remodeled, reconstructed (see Policy 4.1.4(a)), or expanded in size. The lot line of an existing single-family residential parcel may be adjusted. Also, a new single-family residence may be constructed on an existing lot in accordance with Policy 1.4.3. However:
   - Any remodeling, Reconstruction, or expansion must not increase the number of dwelling units. For example, a bedroom could be added to an existing residence, but an additional dwelling unit could not be built on the parcel unless that unit is a secondary dwelling unit as defined by state and local laws.
   - A single-family residential parcel may not be divided for the purpose of allowing additional dwellings to be constructed.

3. Nonconforming multi-family residential dwellings may be maintained, remodeled, or reconstructed (see Policy 4.1.4(a)). The size of individual dwelling units may be increased, but additional dwelling units may not be added.

4. Sound attenuation and Avigation Easement dedication shall be provided where required by Policies 3.2.3 and 4.1.1.

(b) Nonresidential uses (other than children’s schools):

1. A nonconforming nonresidential use may be continued, sold, leased, or rented without ALUC restriction or review.

2. Nonconforming nonresidential facilities may be maintained, altered, or, if required by state law, reconstructed (see Policy 4.1.4). However, any such work:
   - Must not result in expansion of either the portion of the site devoted to the Nonconforming Use or the floor area of the buildings; and
   - Must not result in an increase in the usage Intensity (the number of people per acre) above the levels existing at the time of adoption of this Compatibility Plan.

3. Sound attenuation and Avigation Easement dedication shall be provided where required by Policies 3.2.3 and 4.1.1.

(c) Children’s schools (including grades K-12, day care centers with more than 14 children, and school libraries):

1. Land acquisition for new schools or expansion of existing school sites is not permitted where projected noise impacts exceed CNEL 60 dB (see Map 2) or in Safety Zones 1 through 5.

2. Replacement or expansion of buildings at existing schools is also not allowed in these noise or safety zones, except that one-time expansion accommodating no more than 50 students is permitted where projected noise impacts are between CNEL 60 and 65 dB. This limitation does not preclude work required for normal maintenance or repair.

3. Sound attenuation and Avigation Easement dedication shall be provided where required by Policies 3.2.3 and 4.1.1.

4.1.4. Reconstruction: An existing nonconforming development that has been fully or partially destroyed as the result of a calamity or natural and unavoidable catastrophe, and would oth-
otherwise not be reconstructed but for the calamity or catastrophe, may be rebuilt only under the following conditions:

(a) Single-family or multi-family residential Nonconforming Uses may be rebuilt provided that the Reconstruction does not result in more dwelling units than existed on the parcel at the time of the damage. Addition of a secondary dwelling unit to a single-family residence is permitted if in accordance with state law and local regulations.

(b) A nonresidential Nonconforming Use may be rebuilt provided that the Reconstruction does not increase the floor area of the previous structure or result in an increased Intensity of use (i.e., more people per acre).

(c) Reconstruction under Paragraphs (a) or (b) above:
   (1) Must have a permit application deemed complete by the Local Agency within twelve (12) months of the date the damage occurred.
   (2) Shall incorporate sound attenuation features to the extent required by Policy 3.2.3.
   (3) Shall comply with Federal Aviation Regulations Part 77 requirements (see Policy 3.4.2).

(d) Reconstruction in accordance with Paragraphs (a), (b), and (c) of this policy shall not be allowed where it would be in conflict (not in conformance) with the general plan or zoning ordinance of the Local Agency.

(e) Nothing in the above policies is intended to preclude work required for normal maintenance and repair.

4.1.5. Special Conditions Exception: The compatibility criteria set forth in this Compatibility Plan are intended to be applicable to all locations within the Sacramento International Airport Influence Area that are under the jurisdiction of the Airport Land Use Commission for Sacramento, Sutter, Yolo, and Yuba Counties. However, there may be specific situations where a normally incompatible use can be considered compatible because of terrain, specific location, or other extraordinary factors or circumstances related to the site.

(a) After due consideration of all the factors involved in such situations, the ALUC may find a normally incompatible use to be acceptable.

(b) In reaching such a decision, the ALUC shall make specific findings as to the nature of the extraordinary circumstances that warrant the policy exception and why the exception is being made. Findings also shall be made that the land use will neither create a safety hazard to people on the ground or aircraft in flight nor result in excessive noise exposure for the proposed use.

(c) Approval of a special conditions exception for a proposed Project shall require a two-thirds approval of the ALUC members voting on the matter and shall not be delegated to the ALUC Secretary for approval.

(d) The burden for demonstrating that special conditions apply to a particular Development Proposal rests with the Project proponent and/or the referring Local Agency, not with the ALUC.

(e) The granting of a special conditions exception shall be considered site specific and shall not be generalized to include other sites.
4.2. Site-Specific Exceptions

4.2.1. General: In adoption of this Compatibility Plan, the ALUC has determined that certain known Projects warrant special conditions treatment as envisioned by Policy 4.1.5. These site-specific exceptions and the criteria to be applied to them are as described in the following policies of this section.

4.2.2. Garden Highway Special Planning Area: The intent of this Compatibility Plan is that it is internally consistent with the Garden Highway Special Planning Area, or SPA (last amended June 2002) of the Sacramento County Zoning Code. Construction or replacement of dwellings on existing parcels or the addition of a secondary dwelling unit, if allowed in accordance with the SPA, is allowed under the Compatibility Plan in accordance with Policy 1.4.3. However, any lot splits or other subdivision of land to create additional residential parcels is only permitted if consistent with the policies of the Compatibility Plan.

4.3. General Plan Consistency with Compatibility Plan

4.3.1. Statutory Requirement: State law requires that each Local Agency having territory within an Airport Influence Area modify its general plan and any applicable specific plan to be consistent with the compatibility plan for the particular airport unless it takes the steps required to overrule the ALUC. In order for a general plan to be considered consistent with this Compatibility Plan, the following must be accomplished:

4.3.2. Elimination of Conflicts: No direct conflicts can exist between the two plans.

(a) Direct conflicts primarily involve general plan land use designations that do not meet the Density or Intensity criteria specified in Section 3.3 of this Compatibility Plan. In addition, conflicts with regard to other policies—height limitations in particular—may exist.

(b) A general plan cannot be found inconsistent with the Compatibility Plan because of land use designations that reflect Existing Land Uses even if those designations conflict with the compatibility criteria of this Compatibility Plan. General plan land use designations that merely echo the Existing Land Uses are exempt from requirements for general plan consistency with the Compatibility Plan.

(c) Proposed Redevelopment or other changes to Existing Land Uses are not exempt from compliance with this Compatibility Plan and are subject to ALUC review in accordance with Policies 1.5.1 and 1.5.2. To ensure that Nonconforming Uses do not become more nonconforming, general plans or implementing documents must include policies setting limitations on expansion and Reconstruction of Nonconforming Uses located within the Sacramento International Airport Influence Area consistent with Policies 4.1.3 and 4.1.4.

(d) To be consistent with the Compatibility Plan, a general plan and/or implementing ordinance also must include provisions ensuring long-term compliance with the compatibility criteria. For example, future reuse of a building must not result in a usage Intensity that exceeds the applicable standard or other limit approved by the ALUC.

37 See Chapter 1 and Appendix G for additional guidance.
38 This exemption derives from state law which proscribes ALUC authority over Existing Land Uses.
4.3.3. *Establishment of Review Process: Local Agencies* must define the process they will follow when reviewing proposed land use development within an *Airport Influence Area* to ensure that the development will be consistent with the policies set forth in this *Compatibility Plan*.

(a) The process established must ensure that the proposed development is consistent with the land use or zoning designation indicated in the Local Agency’s general plan, specific plan, zoning ordinance, and/or other development regulations that the ALUC has previously found consistent with this *Compatibility Plan* and that the development’s subsequent use or reuse will remain consistent with the policies herein over time. Additionally, consistency with other applicable compatibility criteria—e.g., usage *Intensity*, height limitations, *Avigation Easement* dedication—must be assessed.

(b) The review process may be described either within the general plan or specific plan(s) themselves or in implementing ordinances. Local jurisdictions have the following choices for satisfying this review process requirement:

1. Sufficient detail can be included in the general plan or specific plan(s) and/or referenced implementing ordinances and regulations to enable the local jurisdiction to assess whether a proposed development fully meets the compatibility criteria specified in the applicable compatibility plan (this means both that the compatibility criteria be identified and that Project review procedures be described);

2. The *Compatibility Plan* can be adopted by reference (in this case, the Project review procedure must be described in a separate policy document or memorandum of understanding presented to and approved by the ALUC); and/or

3. The general plan can indicate that all *Land Use Actions*, or a list of *Land Use Action* types agreed to by the ALUC, shall be submitted to the ALUC for review in accordance with the policies of Section 2.3.

4.4. **Criteria for Review of Airport Plans**

4.4.1. *Substance of Review:* In accordance with state law, any new or amended Sacramento International Airport master plan or development plan is subject to ALUC review for consistency with this *Compatibility Plan* (see Policy 1.5.5). In conducting any such review, the ALUC shall evaluate whether the airport plan would result in greater noise, safety, airspace protection, or overflight impacts than indicated in this *Compatibility Plan*. Attention should specifically focus on:

(a) Proposals for facilities or procedures not assumed herein, specifically:

1. Construction of a new runway or helicopter takeoff and landing area.

2. Change in the length, width, or landing threshold location of an existing runway.

3. Establishment of an instrument approach procedure that changes the approach capabilities at a particular runway end.

4. Modification of the flight tracks associated with existing visual or instrument operations procedures.

(b) New activity forecasts that are: (1) significantly higher than those used in developing *Map 2, Compatibility Policy Map: Noise;* or (2) assume a higher proportion of larger or noisier aircraft.

4.4.2. *Noise Impacts of Airport Expansion:* Any proposed expansion of airport facilities that would result in a significant increase in cumulative noise exposure (measured in terms of CNEL)
shall include measures to reduce the exposure to a less-than-significant level. For the purposes of this plan, a noise increase shall be considered significant if:

(a) In locations having an existing ambient noise level of CNEL 60 dB or less, the Project would increase the noise level by 3.0 dB or more.

(b) In locations having an existing ambient noise level of more than CNEL 60 dB, the Project would increase the noise level by 1.5 dB or more.

4.4.3. **Consistency Determination:** The ALUC shall determine whether the proposed airport plan or development plan is consistent with this Compatibility Plan. The ALUC shall base its determination of consistency on:

(a) Findings that the development and forecasts identified in the airport plan would not result in greater noise, safety, airspace protection, or overflight impacts on surrounding land uses than are assumed in this Compatibility Plan.

(b) Consideration of:

   (1) Mitigation measures incorporated into the plan or Project to reduce any increases in the noise, safety, airspace protection, and overflight impacts to a less-than-significant level in accordance with provisions of CEQA; or

   (2) In instances where the impacts cannot be reduced to a less-than-significant level, a statement of overriding considerations approved by the County of Sacramento as airport owner in accordance with provisions of CEQA.

(c) A determination that any nonaviation development proposed for locations within the Airport boundary (excluding federal- or state-owned property) will be consistent with the compatibility criteria and policies indicated in this Compatibility Plan with respect to the Airport (see Policy 1.2.11 for definition of aviation-related use).

</tbody>
</table>

Legend (see last page of table for interpretation)

- Normally Compatible
- Conditional
- Incompatible

- Interior CNEL limits in yellow cells apply in addition to other listed conditions (see Policy 3.2.3)
- Acoustical study may be required for noise-sensitive uses proposed in areas exposed to CNEL 60 dB or greater (see Policy 3.2.3(d))
- Multiple land use categories and compatibility criteria may apply to a project
- Land uses not specifically listed shall be evaluated using criteria for similar uses

Notes:
- Exercise caution if clear audibility by users is essential
- Exercise caution if noise-sensitive uses proposed in areas exposed to CNEL 60 dB or greater (see Policy 3.2.3(d))
- New schools incompatible above CNEL 60 dB unless special circumstances exist (see Policies 3.2.2(a) and 4.1.5)

### Land Use Acceptability

<table>
<thead>
<tr>
<th>Land Use Acceptability</th>
<th>Interpretation/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normally Compatible</td>
<td>Indoor Uses: Either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL); for land use types that are compatible because of inherent noise levels, sound attenuation must be provided for associated office, retail, and other noise-sensitive indoor spaces sufficient to reduce exterior noise to an indoor maximum of CNEL 50 dB. Outdoor Uses: Except as noted in the table, activities associated with the land use may be carried out with minimal interference from aircraft noise.</td>
</tr>
<tr>
<td>Conditional</td>
<td>Indoor Uses: Building structure must be capable of attenuating exterior noise to the indoor CNEL indicated by the number in the cell (either 45 or 50). Outdoor Uses: Caution should be exercised with regard to noise-sensitive outdoor uses; these uses are likely to be disrupted by aircraft noise events; acceptability is dependent upon characteristics of the specific use.</td>
</tr>
<tr>
<td>Incompatible</td>
<td>Indoor Uses: Unacceptable noise interference if windows are open; at exposures above CNEL 65 dB, extensive mitigation techniques required to make the indoor environment acceptable for performance of activities associated with the land use. Outdoor Uses: Severe noise interference makes the outdoor environment unacceptable for performance of activities associated with the land use.</td>
</tr>
</tbody>
</table>

Table 1, continued
Notes
1. This caution is directed at the project proponent and is not intended to preclude approval of the project.
2. Noise-sensitive land uses are ones for which the associated primary activities, whether indoor or outdoor, are susceptible to disruption by loud noise events. The most common types of noise-sensitive land uses include, but are not limited to, the following: residential, hospitals, nursing facilities, intermediate care facilities, educational facilities, libraries, museums, places of worship, child-care facilities, and certain types of passive recreational parks and open space.

**Legend** (see last page of table for interpretation)

- **Normally Compatible**
- **Conditional**
- **Incompatible**

**Outdoor Uses (limited or no activities in buildings)**

- Natural Land Areas: woods, brush lands, desert
- Water: flood plains, wetlands, lakes, reservoirs
- Agriculture (except residences and livestock): crops, orchards, vineyards, pasture, range land
- Livestock Uses: feed lots, stockyards, breeding, fish hatcheries, horse stables
- Outdoor Major Assembly Facilities (capacity ≥1,000 people): spectator-oriented outdoor stadiums, amphitheaters, fairgrounds, zoos
- Group Recreation (limited spectator stands): athletic fields, water recreation facilities, picnic areas
- Small/Non-Group Recreation: golf courses, tennis courts, shooting ranges
- Local Parks: children-oriented neighborhood parks, playgrounds
- Camping: campgrounds, recreational vehicle/motor home parks
- Cemeteries (except chapels)

**Residential and Lodging Uses**

- Single-Family Residential (<8 d.u./acre): individual dwellings, townhouses, mobile homes, bed & breakfast inns
- Multi-Family Residential (≥8 d.u./acre): condominiums, apartments, agricultural-related housing
- Long-Term Lodging (>30 nights): extended-stay hotels, dormitories

- 1: Objects above runway elevation not allowed in Object Free Area (OFA)
- 1: Objects above runway elevation not allowed in Object Free Area (OFA)
- 1: Not allowed in Object Free Area (OFA)

- 6: Allowed only if beyond ½ mile from runway and alternative site outside zone would not serve intended function; not allowed within ½ mile of runway
- 3, 4: Allowed only if beyond ½ mile from runway and alternative site outside zone would not serve intended function; not allowed within ½ mile of runway
- 3: Allowed only if beyond ½ mile from runway and alternative site outside zone would not serve intended function; not allowed within ½ mile of runway

- 3, 4: Allowed only if intensity criteria met
- 3, 4: Maximum density of 1 dwelling unit per 10.0 acres; dwelling must be outside of zone
- New dwellings allowed on existing parcels in these zones (see Policy 1.4.3)

- 6: Maximum density of 12.0 dwelling units per gross acre (See Policy 3.3.2(a))

**Sacramento International Airport Land Use Compatibility Plan (Adopted December 12, 2013)**

2-58
<table>
<thead>
<tr>
<th>Land Use Acceptability</th>
<th>Interpretation/Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Normally Compatible</td>
<td>Normal examples of the use are compatible under the presumption that usage intensity and maximum lot coverage criteria will be met. Atypical examples may require review to ensure compliance with usage intensity and lot coverage criteria. Noise, airspace protection, and/or overflight limitations may apply.</td>
</tr>
<tr>
<td>Conditional</td>
<td>Use is compatible if indicated Usage Intensity, Lot Coverage, and other listed conditions are met.</td>
</tr>
<tr>
<td>Incompatible</td>
<td>Use should not be permitted under any normal circumstances. Limited exceptions possible for site-specific special conditions.</td>
</tr>
</tbody>
</table>

Notes
1. Listed Occupancy Load Factors (square feet per person) are based on information from various sources and are intended to represent busy-period usage for typical examples of the land use category.
2. Floor Area Ratios (FARs) are based on listed Occupancy Load Factor for the land use category and are intended as guidance for meeting the Sitewide Average Intensity limits. See Policy 3.3.4(a).
3. No new structures intended to be regularly occupied are allowed.
4. Object Free Area (OFA): Dimensions are established by FAA airport design standards for the runway and are depicted on the Compatibility Policy Map: Safety in this chapter.
5. Construction of a single-family home, including a second dwelling unit as defined by state law, is allowed on a legal lot of record if such use is permitted by local land use regulations. A family day care home (serving ≤14 children) may be established in any existing or allowed dwelling. See Policy 3.3.2(f).
6. These land uses constitute uses of special concern for which safety restrictions apply irrespective of usage intensities. See Policy 3.3.7.
7. Power lines or other tall objects associated with these uses may constitute airspace obstructions. See Policy 3.4.2 for land use restrictions.

- These uses may attract birds, generate dust, produce smoke or steam plumes, create electronic interference, or otherwise pose hazards to flight. See Section 3.4 for land use restrictions.

Table 2, continued
Notes
1. See Section 1.5 for land use actions subject to ALUC review in each referral area.
CHAPTER 2
POLICIES

2. These noise contours are a composite of the projected contours associated with the north-only and split extension scenarios for Runway 16L-34R. See Policy 1.3.2.

3. See Section 3.2 and Table 2 for criteria applicable in each zone.

Notes

2. These noise contours are a composite of the projected contours associated with the north-only and split extension scenarios for Runway 16L-34R. See Policy 1.3.2.

3. See Section 3.2 and Table 2 for criteria applicable in each zone.
Notes

1. See Section 3.3 and Table 2 for criteria applicable in each zone.

2. Air carrier, general aviation, and military aircraft accident risks are all components of safety zones at Sacramento International Airport. Existing and future runway configuration scenarios are also components. Safety Zone policy map boundaries are a composite of all components.

Chapter 3

Background Data: Sacramento International Airport and Environ
Background Data: Sacramento International Airport and Environs

**Overview**

The purpose of this chapter is to document information regarding Sacramento International Airport and its environs that provides the setting upon which this *Sacramento International Airport Land Use Compatibility Plan* is based. The physical configuration and operational characteristics of the airport are critical determinants of the impacts that aircraft activity has on surrounding land uses. Furthermore, the character of current and planned land uses in the surrounding area must be weighed in the development of the compatibility criteria. Lastly, this information is directly relevant to assessment of the environmental impacts of adoption of the plan as required under the California Environmental Quality Act (CEQA) as examined in a companion document.

**Location and History**

Sacramento International Airport (SMF) is located in north-central California in an unincorporated area of northwestern Sacramento County. The nearest portion of the City of Sacramento lies approximately two miles southeast of the airport, while the City of West Sacramento lies approximately six miles south and the City of Woodland approximately seven miles to the west. The common boundary between Yolo, Sutter and Sacramento counties is situated just north of the airport.

Opening in 1967, the airport was first known as Sacramento Metropolitan Airport. Prior to the opening, all local commercial airline flights were operated through Sacramento Executive Airport. The airport surpassed one million passengers within its first year of operation. Today the airport has scheduled passenger and freight service from more than fifteen different airlines.

**Existing Facilities**

The current runway configuration is comprised of two parallel runways. Runways 16L-34R and 16R-34L are oriented north/south and both are 8,600 feet long. Both runways are served by full-length parallel taxiways. The terminal areas and aprons are located between the two parallel runways.

AIRPORT MASTER PLAN STATUS AND FUTURE AIRFIELD IMPROVEMENTS

Work on the current Sacramento International Airport Master Plan was initiated in 2000. In February 2004, the County Board of Supervisors accepted the Master Plan and directed commencement of the environmental review. The Master Plan contains two important development plans relevant to this Compatibility Plan. The Master Plan proposes a third 8,600-foot parallel runway west of the existing airfield system and re-designates Runway 16R-34L as the center runway (16C-34C). The Master Plan also proposes a 2,400-foot extension to Runway 16L-34R split between both ends for a future length of 11,000 feet. The environmental review for the Master Plan identified the environmentally superior alternative as a north-only extension to Runway 16L-34R of 2,400 feet. In August 2007, the Board of Supervisors certified the Environmental Impact Report (EIR) for the Master Plan and approved the Master Plan.

In 2012, the airport began the process of updating the Master Plan to reflect this northerly runway extension. Although it is expected that the update to the Master Plan will resolve the uncertainty surrounding the runway extension, the Compatibility Plan must protect for both possible scenarios until such time as single scenario has been definitively selected. Protection must also be provided for the current runway configuration until improvements are constructed. As such, the exhibits contained in this chapter depict both the split extension and the north-only extension together with the existing configuration. The split extension to Runway 16L-34R, with 1,000 feet to the north and 1,400 feet to the south, is reflected on an Airport Layout Plan (ALP) which was approved by the Federal Aviation Administration (FAA) in 2008. In May 2012, the FAA approved the current ALP for Sacramento International Airport which depicts this extension entirely to the north.

Exhibit 2 summarizes the airport facilities as presented in the 2004 Sacramento International Airport Master Plan and subsequent ALPs.

AIRPORT ACTIVITY

The Airport Master Plan forecast, which was prepared in 2001, predicted a higher level of growth than has actually occurred. For example, the Master Plan forecast indicates that there would be approximately 209,000 annual aircraft operations at Sacramento International Airport in 2010 versus the 126,305 that occurred. Similarly, the Master Plan forecast predicted that the airport would reach approximately 256,800 total annual operations around the 2020 timeframe, but the FAA’s Terminal Area Forecast (TAF)\(^1\) indicates that the airport will not reach this activity level until sometime after 2040. In fact, the TAF predicts that the operational levels approaching the recent 2006 peak of 174,938 annual operations will not return to the airport until after 2026. Beyond that timeframe, the TAF predicts continued growth with annual aircraft operations reaching approximately 200,000 in 20 years. It is important to note, however, aircraft operations could increase at a much higher pace than predicted for a variety of reasons including but not limited to a much stronger economic recovery than currently anticipated, one or more new air carriers beginning service, and new destinations being served.

\(^1\) The Terminal Area Forecast (TAF) system is the official forecast of aviation activity at Federal Aviation Administration (FAA) facilities.
Theoretic Capacity Forecast

In August 2004, PB Aviation prepared an analysis of the functional capacity of Sacramento International Airport for land use compatibility planning purposes. The analysis considered the annual number of aircraft operations the airport could handle if all of the facilities identified in the Airport Master Plan were developed. The analysis determined that Sacramento International Airport would have a Theoretic Capacity of approximately 450,000 annual operations with full Master Plan build out. This Theoretic Capacity forecast has been adopted by the County of Sacramento for land use planning purposes. It is important to note that this number of forecast annual operations results from the planned terminal facilities, airfield development (runways, taxiways, aprons, etc.), and the expected aircraft fleet mix. The Theoretic Capacity is intended to represent a reasonable upper bound on the amount of traffic the airport can handle, so that the appropriate level of airport land use planning can be accomplished to ensure compatibility between the aircraft operations and the surrounding land uses. The Theoretic Capacity operations, aircraft fleet mix, runway use, etc. were entered into the FAA-approved Integrated Noise Model to develop a set of Community Noise Equivalent Level (CNEL) contours that could be used for land use planning purposes.

Surrounding Land Uses

Sacramento International Airport is located in the northwestern portion of Sacramento County, approximately 10 miles from Downtown Sacramento. The Sacramento River which is located about a half mile west of the airfield forms the boundary between Sacramento and Yolo Counties. Sutter and Placer counties are located two and six miles north and northeast of the airport, respectively. The unincorporated areas of these three counties are primarily agricultural. Established residential neighborhoods associated with the City of Sacramento exist approximately two miles east/southeast of the airfield. Urban development in the City of West Sacramento is located about six miles to the south.

Local general plans show future growth patterns moving towards the airport. The City of Sacramento’s 2030 General Plan proposes a new residential community, known as the Greenbriar community, located in the northwestern limits of the City of Sacramento west of Highway 99 and north of Interstate 5. This planned community is located northwest of the North Natomas community of the City of Sacramento and east of the Metro Air Park, an industrial/business park in unincorporated northwest Sacramento County.

On December 10, 2002, the Sacramento City Council and County Board of Supervisors adopted a Memorandum of Understanding (MOU) outlining principles of land use and revenue sharing between the City and County of Sacramento for the Natomas area, setting the stage for what has come to be known as the Natomas Joint Vision. The Natomas Joint Vision is a collaborative process between the City and County to consider a plan for development and habitat preservation in the unincorporated northwest portion of the County. The Natomas Joint Vision Study Area covers a contiguous land area of approximately 20,000 acres in the unincorporated northwestern area of Sacramento County within the Natomas Basin (see Exhibits 15 and 16). The cooperative effort addresses land use, economic development, and environmental opportunities and challenges in Natomas. Subsequent to the adoption of the Sacramento County 2030 General Plan in November 2011, the Board of Supervisors initiated the Northwest Master Plan and General Plan Amendments for the Natomas Joint Vision Area in February 2012. The Northwest Master Plan process will determine the boundary locations of an expanded Urban

Services Boundary and Urban Policy Area, associated rezones and a Special Planning Area zone. The result will be quality development balanced with permanent open space preservation systems.

In Sutter County, along the southern boundary abutting Sacramento County, a new unincorporated community is planned. The Sutter Pointe Specific Plan straddles Highway 99 with mixed use on the west of the Highway and a mix of uses including industrial, commercial and residential uses east of the Highway. The Plan is comprised of a series Employment and Residential “Villages”.

The County of Yolo adopted the Elkhorn Specific Plan in 2009. The Specific Plan area is located immediately west of the Sacramento River along Interstate 5, less than two miles west of Sacramento International Airport. The Specific Plan tentatively calls for 300 acres of commercial and industrial land uses with upper story residential uses, 23 acres of Open Space and 20 acres of Public and Quasi-Public uses. The 2030 Countywide General Plan includes a policy (Policy CC-3.16E) to modify and amend the Elkhorn Specific Plan to accommodate high density residential development to provide workforce housing. The precise number of units will be determined through the specific plan and associated environmental review process.

Also in Yolo County, the City of Woodland west of the airport is expanding eastward toward the airport. The General Plan calls for studying the possibility of using a 900-acre industrial waste water facility for urban development at some point in the future and designates the property and the surrounding area as Urban Reserve. No development can occur within the Urban Reserve area without a General Plan amendment. Other planned land uses include Industrial, Business Park, and Highway Commercial east of County Road 102 and planned neighborhoods west of County Road 102 and south of Gibson Road.

To the east in Placer County, three Specific Plan projects are proposed. Although far enough from the airport to not be greatly impacted, these areas would be subject to aircraft overflights. They are:

- The Regional University Specific Plan project comprises 1,157.5 acres and incorporates two integrated elements: a 600 acre University and a 557.5 acre Community. Located west of the City of Roseville and approximately 3 miles north of the Sacramento County boundary, the primary components of the University include the academic core, the quad, the campus commons, administration, student village, athletic facilities, faculty housing, retirement housing and open space areas. The Community is conceived as a full service community incorporating residential, retail/office, public facilities, parks and open space. The Board of Supervisors approved this Specific Plan in December 2008 and incorporated it into the General Plan.

- The Placer Vineyards Specific Plan project is a mixed-use master planned community with residential, employment, commercial, open space, recreational and public/quasi-public land uses. The Plan is located in the southwest corner of Placer County, just north of the Sacramento County boundary and it provides for 14,132 homes in a range of housing types, styles, and densities. At Plan build out, projected to occur over a 20 to 30-year time frame, Placer Vineyards will have a population of approximately 33,000 people, 274 acres of commercial uses, 641 acres of quasi-public (public facilities/services, religious facilities, schools, and major roadways) land uses, and 919 acres of park and open space land. The Board of Supervisors approved this Plan on July 16, 2007.

Exhibit 12 provides additional information about current and planned land uses in the environs of the Sacramento International Airport. Exhibit 14 maps the current land uses. Finally, Exhibits 15 and 16 show planned future land use development as reflected in the adopted general plans of the surrounding
jurisdictions. At this time, none of the local jurisdictions are in the process of updating the land use element of their respective general plans.

**Exhibits**

The following exhibits illustrate the compatibility factors and background information which will be the basis for the *Sacramento International Airport Land Use Compatibility Plan*.

- **Exhibit 1: Airport Location**—Depicts the Airport’s location within the Sacramento area as well as in California.

- **Exhibit 2: Airport Features Summary**—Summarizes information pertaining to the airport configuration, operational characteristics, and applicable planning documents.

- **Exhibit 3: 2012 Airport Layout Plan**—The current ALP approved by the FAA in May 2012 depicts a north-only extension to Runway 16L-34R. Following FAA approval, the ALP will be submitted to the California Division of Aeronautics for acceptance as the basis of the *Sacramento International Airport Land Use Compatibility Plan*.

- **Exhibit 4: 2008 Airport Layout Plan**—The FAA-approved ALP depicting the north and south extension to Runway 16L-34R. Areas identified as agricultural use on this ALP are no longer identified as such on the 2012 ALP. All agricultural leases on Sacramento International Airport property were allowed to expire on December 31, 2007.

- **Exhibit 5: Airport Activity Summary**—Summarizes existing and forecast activity levels for the airport as well as specific Integrated Noise Model (INM) inputs required for the generation of the Theoretic Capacity noise contours.

- **Exhibit 6: Radar Data**—Graphical depiction of radar flight tracks. The viewports depict all aircraft types in south flow, all aircraft types in north flow, and T-38 tracks in south and north flow. Radar tracks were taken from four days in 2011, one from each quarter of the calendar year.

- **Exhibit 7: Noise Factors Map**—Two depictions of noise contours based on the Theoretic Capacity of the airport which reflect the north only and split extension to Runway 16L-34R.

- **Exhibit 8: Safety Factors Map – Existing Runway Configuration**—This exhibit contains the existing runway configuration with generic Large Air Carrier Safety Zones, and the Long General Aviation Safety Zones as presented in the California Airport Land Use Planning Handbook, as well as military safety zones.

- **Exhibit 9: Safety Factors Map – Split Extension**—This exhibit contains the future split extension runway configuration with generic Large Air Carrier Safety Zones, and the Long General Aviation Safety Zones as presented in the California Airport Land Use Planning Handbook, as well as military safety zones.

- **Exhibit 10: Safety Factors Map – North-Only Extension**—This exhibit contains the future north only extension runway configuration with generic Large Air Carrier Safety Zones, and the Long General Aviation Safety Zones as presented in the California Airport Land Use Planning Handbook, as well as military safety zones.
> **Exhibit 11: Overflight Factors**—Depicts the relationship between radar tracks, single event military noise contours and the Airport Planning Policy Area.

> **Exhibit 12: Airport Environ Information**—Summarizes information about current and planned land uses in the environs of the Sacramento International Airport. Airport land use compatibility policies contained in each general plan is also summarized.

> **Exhibit 13: School Districts**—Identifies the school districts within the airport environs. Children’s schools (Kindergarten through Grade 12) and community colleges are also shown. In accordance with Public Utilities Code Section 21670(f), school districts, community college districts and special districts are included among the local agencies that are subject to airport land use laws. Information on school districts within Sutter and Yolo Counties is pending. A map showing special districts is also pending.

> **Exhibit 14: Existing Land Uses**—Maps current land uses within the airport environs. Land use designations are based on GIS data provided by each county.

> **Exhibit 15: General Plan Land Use – County Data**—Shows planned land use designations as reflected in the adopted general plan land use diagrams for Sacramento, Placer, Sutter and Yolo counties. Planned land uses shown for the areas within the Primary Study Area.

> **Exhibit 16: General Plan Land Use – City Data**—Depicts planned land use designations as reflected in the adopted general plan land use diagrams for the cities of Davis, Sacramento, Roseville, West Sacramento and Woodland. Planned land uses are shown for the areas within the Primary Study Area. For Roseville and Woodland, the majority of the area captured in the study area includes areas within the cities’ sphere of influence.

Airport Location

Sacramento International Airport
**General Information**
- **Airport Ownership:** County of Sacramento
- **Operated by:** Sacramento County Airport System (SCAS)
- **Year Opened**
  - Opened October 1967 as Sacramento Metropolitan Field
  - Terminal A opened in 1998, airport renamed Sacramento International Airport
  - New Terminal B opened October 2011
- **Property Size**
  - Sacramento County owns approximately 5,888 acres surrounding airport
  - Approximately 1,814 acres makeup the Airport Operations Area
  - The airport area between I-5 on the south, Power Line Road on the east, the airport perimeter fence on the west and Elverta Road on the north is approximately 2,479 acres.
- **Airport Classification:** Medium hub
- **Airport Elevation:** 27 ft. MSL

**Runway/Taxiway Design**

**Runway 16L-34R**
- **Airport Reference Code:** C-IV
- **Critical Aircraft:** Boeing 767-300 (occasional military C-5 operations)
- **Dimensions:** 8,600 ft. long, 150 ft. wide
- **Pavement Strength** (main landing gear configuration)
  - 100,000 lbs. (single wheel)
  - 209,000 lbs. (dual wheel)
  - 407,000 lbs. (dual-tandem wheel)
  - 850,000 lbs. (double-dual-tandem)
- **Effective Gradient:** 0.03%
- **Runway Lighting and Visual Approach Aids**
  - High intensity runway lights (HIRL), center line (CL), and touchdown zone (TDZ)
  - Runway 16L: MALS/PI-4
  - Runway 34R: PAPI-4
- **Primary Taxiways:** Full-length parallel taxiway on west (D); cross-field taxiway (Y)

**Runway 16R-34L (Future 16C-34C)**
- **Airport Reference Code:** C-IV
- **Critical Aircraft:** Boeing 767-300 (occasional military C-5 operations)
- **Dimensions:** 8,600 ft. long, 150 ft. wide
- **Pavement Strength** (main landing gear configuration)
  - 100,000 lbs. (single wheel)
  - 209,000 lbs. (dual wheel)
  - 407,000 lbs. (dual-tandem wheel)
  - 850,000 lbs. (double-dual-tandem)
- **Effective Gradient:** 0.06%
- **Runway Lighting**
  - High intensity runway lights (HIRL), center line (CL), and touchdown zone (TDZ)
- **Runway 16R:** ALSF-2
- **Runway 34L:** MALSR, VASI-4
- **Primary Taxiways:** Full-length parallel taxiway on west (A); cross-field taxiway (Y)

**Building Area**
- **Airside Facilities**
  - Two parallel, north/south runways
  - 27,000 linear feet of existing taxiways
  - 35 acres of passenger terminal apron area; 4-acre air cargo apron; 3-acre DHL apron; and 8-acre general aviation apron
  - FAA Air Traffic Control Tower
- **Landside Facilities**
  - Two passenger terminals (A and B)
  - Five-floor parking structure and surface parking lots
  - Rental car facilities
  - Three air cargo hangars totaling 40,000 sq. feet
  - 19,000 sq. foot USPS facility
  - 66,440 sq. feet of general aviation hangar space
  - Airport rescue and fire-fighting (ARFF) facility
  - Fuel storage and delivery system
  - Airport maintenance facilities
- **Airport Planning Documents**
  - **Airport Master Plan, 2004**
  - **Airport Master Plan Environmental Impact Report, Certified July 2007**
  - **Airport Layout Plan, 2008**
  - **Draft Airport Layout Plan, 2012**
  - **Comprehensive Land Use Plan, 1994**
  - **Wildlife Hazard Management Plan Update, 2010**
  - **Airport Wildlife Hazard Assessment, 2012**

**Approach Protection**
- **Approach Obstruction**
  - Runway 16L-34R: None
  - Runway 16R(3)-34L(3): None
- **Runway Protection Zones**
  - Runway 16L-34R: All on airport property
  - Runway 16R(3)-34L(3): All on airport property
  - Future Runway 16R-34L: All on future airport property

**Exhibit 2**

**Airport Features Summary**

Sacramento International Airport
CHAPTER 3  BACKGROUND DATA: SACRAMENTO INTERNATIONAL AIRPORT AND ENVIRONS

EXHIBIT 2, CONTINUED

FUTURE AIRPORT FACILITIES

**Future Runway 16R-34L**
- **Airport Reference Code:** C-IV
- **Critical Aircraft:** Boeing 767-300 (occasional military C-5 operations)
- **Dimensions:** 8,600 ft. long, 150 ft. wide

**Runway 16L-34R**
- **Two Runway Extension Scenarios:**
  - 1,000’ extension to north, 1,400’ extension to south
  - 2,400’ extension to north

**Land Acquisition**
- 310 acres for future runway

TRAFFIC PATTERNS AND APPROACH PROCEDURES

- **Airplane Traffic Patterns**
  - Runway 16L and Runway 34L: Left Traffic
  - Runway 16R and Runway 34R: Right Traffic
  - Pattern Altitude: 1,000 – 1,500 Feet AGL

- **Instrument Approach Procedures**
  - ILS or LOC Runway 16L
    - Circling (413’ AGL Min Decent Alt; 1-mile visibility)
  - ILS or LOC Runway 16R
    - Circling (413’ AGL Min Decent Alt; 1-mile visibility)
  - CAT II and CAT III Approaches Available
  - ILS or LOC Runway 34L
    - Circling (413’ AGL Min Decent Alt; 1-mile visibility)
  - RNAV (GPS) Runway 16L
    - Circling (353’ AGL Min Decent Alt; 1½-mile visibility)
  - RNAV (GPS) Runway 16R
    - Circling (413’ AGL Min Decent Alt; 1-mile visibility)
  - RNAV (GPS) Runway 34L
    - Circling (413’ AGL Min Decent Alt; 1½-mile visibility)
  - RNAV (GPS) Runway 34R
    - Circling (693’ AGL Min Decent Alt; 1-mile visibility)

- **Standard Instrument Departure Procedures (Initial Segments)**
  - DUDES NINE
    - Runways 16L/R: Runway heading until 600°, then left turn to a 120° heading
    - Runways 34L/R: Runway heading until 1,500°, then right turn to 140° heading
  - FROGO SIX
    - Runways 16L/R: Runway heading until 600°, then left turn to a 120° heading
    - Runways 34L/R: Runway heading until 1,500°, then right turn to 140° heading

Source: Mead & Hunt, Inc. and ESA Airports (March 2012)

TRAFFIC PATTERNS AND APPROACH PROCEDURES (CONTINUED)

- **Standard Instrument Departure Procedures (Initial Segments) (Continued)**
  - Obstacle Departure Procedure
    - Runway 16L: Climb via heading 164° to 800’ before turning east
  - Standard Terminal Arrival Procedures
    - CONCORD ONE (South, Southwest)
    - FLUNK THREE (East, Northeast)
    - TUDOR TWO (North)
    - WRAPS FIVE (South, Southeast)

- **Operational Restrictions/ Noise Abatement Procedures**
  - ALSF-2 operates as SSALR during VFR conditions
  - Noise sensitive areas west of airport on Sacramento River. Local turn discouraged for jet aircraft. When conducting IFR approach in VFR conditions, execute missed approach at departure end of runways. Plan VFR patterns to the east. Use minimum power settings.

ABBREVIATIONS

- AGL: Above Ground Level
- ALSF-2: Approach Lighting System with Sequence Flashers
- ATCT: Air Traffic Control Tower
- GPS: Global Positioning System
- IFR: Instrument Flight Rules
- ILS: Instrument Landing System
- LOC: Localizer Approach
- RNAV: Area Navigation
- SSALR: Simplified Short Approach Lighting System with Runway Alignment Indicator
- TWY: Taxiway
- VFR: Visual Flight Rules

Sacramento International Airport Land Use Compatibility Plan (Adopted December 12, 2013)
As of November 9, 2011, the Board of Supervisors no longer allows agricultural use of airport lands. Land north of Elverta Road and south of I-5 are designated as Airport Management Areas and managed exclusively by the Airport to minimize hazardous wildlife attractants in the airport approach, departure, and circling airspace.

## AIRPORT SITE

- **Location**
  - Located in northwestern corner of Sacramento County near I-5 and the Sacramento River, approximately 9 miles northwest of central Sacramento
- **Nearby Terrain**
  - Relatively flat in immediate vicinity
  - Sierra Nevada Mountain Range to the east

## AIRPORT ENVIRONS LAND USE JURISDICTIONS

### Sacramento County
- Airport lies in northwest corner of county
- North Natomas Community located 2 miles southeast of airfield

### Placer County
- County Line
  - 6 miles northeast of airfield
- City of Roseville Limits
  - 11 miles northeast of airfield

### Solano County
- County Line
  - 12 miles southwest of airfield

### Sutter County
- County Line
  - 2 miles north of airfield

### Yolo County
- County Line
  - 0.5 mile west of airfield
- City of Davis
  - 9.5 miles southwest of airfield
- City of West Sacramento
  - 6 miles south of airfield
- City of Woodland
  - 6 miles east of airfield

## EXISTING AIRPORT AREA LAND USES

**Source:** Google Earth

- **General Character**
  - Airport lands surrounded primarily by agricultural uses; Metro Air Park located to east; Golf course located 0.5 mile west of airfield; Sacramento River located 0.5 mile west of airfield; and Residential and commercial development in North Natomas Community of the City of Sacramento encroaching airport from east
- **Runway Approaches**
  - North (Runway 16R/L): Airport lands and agriculture; Sutter County line 2 miles north of runway ends
  - South (Runway 34R/L): Airport lands and agricultural uses; Yolo County line 2 miles south of runway ends

## STATUS OF COMMUNITY PLANS

### Sacramento County
- General Plan of 2005-2030 adopted December 1993; amended November 2011
- General Plan Land Use Diagram amended November 2011
- Natomas Joint Vision Northwest Master Plan initiated in 2011 (adoption pending)
- Metro Air Park Special Planning Area including tentative map adopted July 2008

### City of Sacramento
- 2030 General Plan adopted March 2009
- General Plan Land Use Diagram amended April 2011

### Placer County
- Regional University Specific Plan adopted December 2008 and incorporated into the General Plan
- Placer Vineyards Specific Plan adopted July 2007

### City of Roseville
- General Plan 2025 adopted May 2010; updated September 2010
- General Plan 2025 Land Use Map adopted May 2010; updated November 2011

### Sutter County
- General Plan adopted March 2011
- General Plan Land Use Diagram adopted March 2011; updated May 2011
- Sutter Pointe Specific Plan adopted June 2009 and incorporated into the General Plan

### Yolo County
- General Plan adopted March 2011
- General Plan Land Use Diagram adopted March 2011; updated May 2011
- Sutter Pointe Specific Plan adopted June 2009 and incorporated into the General Plan

### City of Davis
- Davis General Plan and General Plan Land Uses Map adopted May 2001 with amendments through 2007
- Elkhorn Specific Plan adopted November 2009 and incorporated into General Plan

### City of West Sacramento
- General Plan Land Use Map updated August 2009

### City of Woodland
- General Plan Policy Document and Land Use Diagram adopted December 2002
### PLANNED AIRPORT AREA LAND USES

#### Sacramento County
- **Sacramento County (Immediate Airport Environns)**
  - Public & Quasi-Public on Airport-controlled land, Agricultural Cropland northeast, west and southeast of airport lands; Intensive Industrial to east
- **City of Sacramento (East/Southeast)**
  - City expanding westward
  - Greenbriar Community proposed immediately west of North Natomas, southeast of airport; uses mainly Medium Density Residential (7-17 du/ac); other uses include Low and High Density Residential (<30 du/ac), Commercial, Parks, Employment Center (Low and Mid Rise)

#### Placer County (Northeast)
- **Placer County (Northeast)**
  - Intensive Development Reserve, Rural Residential (1 du/2-3 ac), Agriculture-Residential Development Reserve (1 du/4.6-20 ac), Agriculture/Timberland (1 du/20 ac), Agriculture/Timberland (1 du/80 ac), Regional University Specific Plan, and Placer Vineyards
- **City of Roseville (Northeast)**
  - Open Space and Public/Quasi Public; designations provide for area within City’s sphere of influence called “Reason Farms”

#### Sutter County
- **Sutter County (North)**
  - Agriculture and Sutter Pointe Specific Plan area including a mix of uses reflecting a new community (Residential, Schools, Parks, Commercial, Employment)

#### Yolo County
- **Yolo County (West/South)**
  - Agriculture, Specific Plan Area, Open Space, and Public and Quasi-Public
- **City of Davis (Southwest)**
  - Low to High Density Residential (3-25 du/ac), Public/Semi Public, Business Park, Office, Retail, Parks/Recreation
- **City of West Sacramento (South)**
  - Public/Quasi Public, Mixed Commercial/Industrial, Low to High Density Residential (1.1-25 du/ac)
- **City of Woodland (West)**
  - Urban Reserve, Public Service, Industrial, Highway Commercial, Low to Medium Density Residential (3-15 du/ac)

### ESTABLISHED AIRPORT COMPATIBILITY MEASURES

#### Sacramento County
- **Sacramento County 2005-2030 General Plan (2011)**
  - Land Use (LU)-87: Because land decisions around airports by local governments have a direct impact on an airport’s long-term viability and utility, proposed new land use projects and land use practices near airports within Sacramento County shall consider consistency with current federal, state, and local airport land use compatibility regulations, orders, policies, plan, standards and guidance pertaining to public safety and minimization of hazardous wildlife attractants within five statute miles of County airports.
- **Sacramento County 2005-2030 General Plan (2011) (continued)**
  - LU-88: Project submittals for proposed new airport and heliport projects in Sacramento County shall include documentation of consistency with all current local, state, and federal regulations policies and guidance regarding air transportation facility design and land use compatibility.
  - Noise (NO)-2: Proposals for new development within Sacramento County which may be affected by aircraft noise shall be evaluated relative to [General Plan] Table 4: Land Use Compatibility for Aircraft Noise.
  - NO-3: New residential development within the 60 CNEL noise contours adopted by the County for planning purposes at any airport or helipad within Sacramento County shall be prohibited. This policy is not applicable to Executive Airport.
  - NO-4: New residential development within adopted Airport Policy Area boundaries, but outside the 60 CNEL, shall be subject to the following conditions: 1) provide minimum noise insulation to 45 dB CNEL within new residential dwellings, including detached single family dwellings, with windows closed in any habitable room; 2) notification in the Public Report prepared by the California Department of Real Estate disclosing the fact to prospective buyers that the parcel is located within an Airport Policy Area; and 3) an Avigation Easement prepared by the Sacramento County Counsel’s Office granted to the County of Sacramento, recorded with the Sacramento County Recorder, and filed with Department of Airports. Such Avigation Easement shall acknowledge the property location within an Airport Planning Policy Area and shall grant the right of flight and unobstructed passage of all aircraft into and out of the subject Airport. [See General Plan for exceptions]
  - Public Facility (PF)-78: Large solar and other renewable energy facilities should be referred to SCAS and FAA for review and comment.
  - PF-88: Locate new transmission towers at a distance from airport runways consistent with FAR Part 77.
  - The County Board of Supervisors adopted Airport Planning Policy Areas (APPAs) for Sacramento International, Sacramento Mather, and McClellan as an interim effort to ensure airport land use compatibility during a period of rapid development that was outpacing the rate at which airport master plans, environmental documentation, and Airport Land Use Compatibility Plans could be updated. The APPAs will continue to be used by the County Airport System in evaluating and commenting on proposed land use project and activities near the airports. APPAs were adopted by Resolution numbers 2006-0490, 2006-1378, and 2006-1379, adopted April 19, 2006.
- **City of Sacramento 2030 General Plan (2009)**
  - Land Use (LU) 8.1.15: Airport Compatibility. The City shall work with the Sacramento County Airport System (SCAS) and the Airport Land Use Commission to ensure that new development near the area’s airports is compatible with airport operations and Airport Land Use Compatibility Plans.
  - LU 8.1.16: Consistency with Airport Land Use Commission Policies. The City shall ensure that all development is consistent with the policies adopted by the SACOG Airport Land Use Commission.

---

**Exhibit 12, continued**
ESTABLISHED AIRPORT COMPATIBILITY MEASURES

Sacramento County

- City of Sacramento 2030 General Plan (2009)(continued)
  - LU 8.1.17. Deed Notice. The City shall require that all new development within an airport-defined over-flight zone provide deed notices to future residents and property owners upon transfer of title concerning airport over-flights and noise.
  - LU 8.1.18. Airport Related Land Uses. The City shall encourage commercial and industrial developments requiring air service to locate in the vicinity of an airport.
  - Environmental Constraints (EC) 3.2.1. Land Use Compatibility. This City shall limit residential development within the 65 dBA CNEL airport noise contour, or in accordance with plans prepared by the Airport Land Use Commission, and shall only approve noise-compatible land uses.
  - EC 3.2.2. Hazardous Noise Protection. The City shall discourage outdoor activities or uses in areas outside the 70 dBA CNEL airport noise contour where people could be exposed to hazardous noise levels.
  - EC 3.2.3. Cooperative Noise Reduction. The City shall work with the SCAS to monitor aircraft noise, implement noise-reducing operation measures (i.e., Fly Quiet, Fly Neighborly programs), and promote pilot awareness of noise sensitive land uses.

Placer County

  - No compatibility policies pertaining to Sacramento International Airport

- City of Roseville 2025 General Plan (2010)
  - No compatibility policies pertaining to Sacramento International Airport

Sutter County

- Sutter County General Plan (2011)
  - No compatibility policies pertaining to Sacramento International Airport

Yolo County

- Yolo County 2030 Countywide General Plan (2009)
  - Land Use (LU)-3.6: Maintain the compatibility of surrounding land uses and development, so as not to impede the existing and planned operation of public airports.
  - Circulation (CI)-9.3: Protect airports from incompatible features, such as height obstructions (including trees that extend into the safety clearance area) and safety impediments (such as proximate concentrations of waterfowl).
  - Health and Safety (HS), Section 5a, Airport Operations, Background: Yolo County is affected by Sacramento International Airport. While the airport is not inside Yolo County, noise, safety and land use compatibility concerns do extend into Yolo County and must be addressed in this General Plan.
  - HS-5.1: Ensure that land uses within the vicinity of airports are compatible with airport restrictions and operations.
  - HS-5.2: Ensure that new development near commercial and public use airports is consistent with land use restrictions as determined by Sacramento Area Council of Governments Airport Land Use Commission. HS-5.3: Respect and conservatively enforce airport safety zones as identified in airports Comprehensive Land Use Plans.

- Yolo County 2030 General Plan (2009)(continued)
  - HS-7.5 Minimize the impact of noise from transportation sources including airports on nearby sensitive land use.
  - HS-A67: Limit land uses, consistent with adopted CLUP within identified airport safety zones.
  - HS-A68: Refer proposed development projects within areas requiring airport land use compatibility review to the ALUC.

- City of Davis General Plan (2000 with amendments through 2007)
  - No compatibility measures except the Background section of the Noise Element which states: The Sacramento International Airport currently does not significantly impact Davis with aircraft noise. The City of Davis must monitor future airport plans to become aware of any proposed changes to the flight paths.

- City of West Sacramento General Plan Policy Document (2008)
  - No compatibility policies pertaining to Sacramento International Airport

  - CI-3.8.G.1. The City shall work closely with appropriate agencies, including the Sacramento Area Council of Governments (SACOG) and Yolo County, to ensure compatibility of land uses with air terminal facilities serving the Woodland community.
  - CI-3.8.G.2. The City shall emphasize compatibility of land uses for both urban development and for air terminal facilities to ensure the availability of services and quality living environment.
  - CI-3.8.G.4. The City will oppose changes in flight patterns that would increase flight activity over Woodland.
  - HS-8.D.1. The City shall work with Yolo and Sacramento Counties to ensure that new development around airports does not create safety hazards such as light from direct or reflective sources, smoke, electrical interference, hazardous chemicals, or fuel storage in violation of adopted safety standards.
  - HS-8.D.2. The City shall ensure that development within the airport approach and departure zones complies with Part 77 of the Federal Aviation Administration Regulations (objects affecting navigable airspace).

General Plan Land Use
Appendices
INTRODUCTION

This appendix outlines the policy foundations upon which airport land use compatibility planning in California is based. Much of the material presented here is drawn from the October 2011 edition of the California Airport Land Use Planning Handbook published by the California Division of Aeronautics. (For those seeking more detail, the Handbook is available on-line at the Division’s web site: www.dot.ca.gov/hq/planning/aeronaut/htmlfile/landuse.html.)

In beginning of this discussion, it is important to recognize that relatively little of the policy foundations for airport land use compatibility planning come directly from statutes or are otherwise regulatory in nature. The applicable California statutes deal primarily with the process of compatibility planning, not with criteria defining what land uses are or are not compatible with airports. The statutes require airport land use commissions to “be guided by” information in the state Handbook, but the Handbook does not constitute formal state policy or regulation. On the federal level, the guidance is even less regulatory in nature. The U.S. Constitution precludes federal government regulation of local land uses. Federal government direct involvement in airport land use compatibility planning occurs mostly because of the federal grant funding upon which airports rely. Beyond this type of involvement, various federal agencies have established nonregulatory guidelines that pertain to airport land use compatibility.

FEDERAL GOVERNMENT POLICIES

Federal airport land use compatibility policies are concerned mostly with noise issues. Several statutes deal specifically with aircraft noise. These statutes are implemented through regulations and policies of individual federal agencies, in particular the Federal Aviation Administration (FAA). Guidance with regard to safety is primarily limited to FAA regulations concerning airport design and protection of airport airspace.

Statutes

Three statutes are of particular relevance to airport land use compatibility planning in that they both support and limit the actions that airports can take to mitigate noise impacts.

- Aviation Safety and Noise Abatement Act of 1979 (ASNA)—Among the stated purposes of this act is “to provide assistance to airport operators to prepare and carry out noise compatibility programs.” The law establishes funding for noise compatibility planning and sets the requirements by which airport operators can apply for funding. The law does not require any airport to develop a noise compatibility program—the decision to do so is the choice of each individual airport proprietor. Regulations implementing the act are set forth in Federal Aviation Regulations Part 150.
▪ **Airport and Airway Improvement Act of 1982 (AAIA)**—This act established the Airport Improvement Program (AIP) through which federal funds are made available for airport improvements and noise compatibility planning. The act has been amended several times, but remains in effect as of early 2009. Land use compatibility provisions of the act are implemented primarily by means of the assurances that airports must provide in order to receive federal airport improvement grants.

▪ **Airport Noise and Capacity Act of 1990 (ANCA)**—In adopting this legislation, Congress’ stated intention was to try to balance local needs for airport noise abatement with national needs for an effective air transportation system. To accomplish this objective, the act did two things: (1) it directed the FAA to establish a national program to review noise and access restrictions on aircraft operations imposed by airport proprietors; and (2) it established requirements for the phase-out of older model, comparatively louder, “Stage 2” airline aircraft from the nation’s airline fleet by January 2000. These two requirements are implemented by Federal Aviation Regulations Part 161 and 91, respectively.

**Federal Aviation Administration**

The most significant FAA policies having a bearing on airport land use compatibility are found in Federal Aviation Regulations and, secondarily, in certain Advisory Circulars.

▪ **Federal Aviation Regulations Part 36, Noise Standards: Aircraft Type and Airworthiness Certification**—This part of the Federal Aviation Regulations sets the noise limits that all newly produced aircraft must meet as part of their airworthiness certification.

▪ **Federal Aviation Regulations Part 91, General Operating and Flight Rules**—This part of the Federal Aviation Regulations sets many of the rules by which aircraft flights within the United States are to be conducted. Rules governing noise limits are set forth in Subpart I. Within this subpart is a provision which mandated that all Stage 2 civil subsonic aircraft having a maximum gross weight of more than 75,000 pounds be phased out of operation within the United States by January 1, 2000. These FAR implements the requirements set forth in the Airport Noise and Capacity Act of 1990.

▪ **Federal Aviation Regulations Part 150, Airport Noise Compatibility Planning**—As a means of implementing the Aviation Safety and Noise Abatement Act of 1979, the FAA adopted these regulations establishing a voluntary program that airports can utilize to conduct airport noise compatibility planning. “This part prescribes the procedures, standards, and methodology governing the development, submission, and review of airport noise exposure maps and airport noise compatibility programs, including the process for evaluating and approving or disapproving these programs.” Part 150 also prescribes a system for measuring airport noise impacts and presents guidelines for identifying incompatible land uses. Airports that choose to undertake a Part 150 study are eligible for federal funding both for the study itself and for implementation of approved components of the local program.

The noise exposure maps are to be depicted in terms of average annual Day-Night Average Sound Level (DNL) contours around the airport. For the purposes of federal regulations, all land uses are considered compatible with noise levels of less than DNL 65 dB. At higher noise exposures, selected land uses are also deemed acceptable, depending upon the nature of the use and the degree of structural noise attenuation provided. In setting the various compatibility guidelines, however, the regulations state that the designations:
“...do not constitute a Federal determination that any use of land covered by the [noise compatibility] program is acceptable or unacceptable under federal, state, or local law. The responsibility for determining the acceptable and permissible land uses and the relationship between specific properties and specific noise contours rests with the local authorities. FAA determinations under Part 150 are not intended to substitute federally determined land uses for those determined to be appropriate by local authorities in response to locally determined needs and values in achieving noise compatible land uses.” [emphasis added]

Note that the DNL noise metric is the same as the CNEL (Community Noise Equivalent Level) metric used in California except that DNL does not include a penalty weighting for evening (7:00 to 10:00 p.m.) operations—each operation is counted as if it were three operations—as does CNEL. Both metrics apply a 10-fold weighting—each operation is counted 10 times—for nighttime activity (10:00 p.m. to 7:00 a.m.).

▶ Federal Aviation Regulations Part 161, Notice and Approval of Airport Noise and Access Restrictions—This part of the federal regulations implements the Airport Noise and Capacity Act of 1990. It codifies the analysis and notification requirements for airport proprietors proposing aircraft noise and access restrictions on Stage 2 or Stage 3 aircraft weighing 75,000 pounds or more. Among other things, an extensive cost-benefit analysis of proposed restrictions is required. The analysis requirements are closely tied to the process set forth in FAR Part 150 and are more stringent with respect to the quieter, Stage 3 aircraft than for Stage 2.

▶ Federal Aviation Regulations Part 77, Safe, Efficient Use and Preservation of the Navigable Airspace—FAR Part 77 establishes standards for determining obstructions to navigable airspace and the effects of such obstructions on the safe and efficient use of that airspace. The regulations require that the FAA be notified of proposed construction or alteration of objects—whether permanent, temporary, or of natural growth—if those objects would be of a height that would exceed the FAR Part 77 criteria. The height limits are defined in terms of imaginary surfaces in the airspace extending about two to three miles around airport runways and approximately 9.5 miles from the ends of runways having a precision instrument approach. FAR Part 77 is applicable to both civilian and military airports although the specific standards differ.

When notified of a proposed construction, the FAA conducts an aeronautical study to determine whether the object would constitute an airspace hazard. Simply because an object (or the ground) would exceed an airport’s airspace surfaces established in accordance with FAR Part 77 criteria does not mean that the object would be considered a hazard. Various factors, including the extent to which an object is shielded by nearby taller objects, are taken into account. The FAA may recommend marking and lighting of obstructions.

The FAA has no authority to remove or to prevent construction or growth of objects deemed to be obstructions. Local governments having jurisdiction over land use are typically responsible for establishing height limitation ordinances that prevent new, and enable removal of existing, obstructions to the FAR Part 77 surfaces. Federal action in response to new airspace obstructions is primarily limited to three possibilities:

▶ For airports with instrument approaches, an obstruction could necessitate modification to one or more of the approach procedures (particularly greater visibility and/or cloud ceiling minimums) or even require elimination of an approach procedure.

▶ Airfield changes such as displacement of a landing threshold could be required (especially at airports certificated for commercial air carrier service).
The owner of an airport could be found in noncompliance with the conditions agreed to upon receipt of airport development or property acquisition grant funds and could become ineligible for future grants (or, in extreme cases, be required to repay part of a previous grant).

**FAA Advisory Circular 150/5300-13, Airport Design**—The primary function of this Advisory Circular is to establish standards for dimensions and other features of civilian airport runways, taxiways, and other aircraft operating areas. For the most part, these airport components are all on airport property. One that is sometimes not entirely on airport is the runway protection zone (RPZ). RPZs are trapezoidal-shaped areas located at ground level beyond each end of a runway. The Advisory Circular describes their function as being “to enhance protection of people and property on the ground.” The dimensions of RPZs vary depending upon:

- The type of landing approach available at the airport (visual, nonprecision, or precision); and
- Characteristics of the critical aircraft operating at the airport (weight and approach speed).

Ideally, each runway protection zone should be entirely clear of all objects. The *Airport Design* Advisory Circular strongly recommends that airports own this property outright or, when this is impractical, to obtain easements sufficient to control the land use. Acquisition of this property is eligible for FAA grants (except at some small airports which are not part of the national airport system). Even on portions of the RPZs not under airport control, the FAA recommends that churches, schools, hospitals, office buildings, shopping centers, and other places of public assembly, as well as fuel storage facilities, be prohibited. Automobile parking is considered acceptable only on the outer edges of RPZs (outside the extended object free area).

**Other Federal Agencies**

- **U.S. Environmental Protection Agency (EPA)**—A report published in 1974 by the EPA Office of Noise Abatement and Control continues to be a source of useful background information. Entitled *Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety*, this report is better known as the “Levels Document.” The document does not constitute EPA regulations or standards. Rather, it is intended to “provide state and local governments as well as the federal government and the private sector with an informational point of departure for the purposes of decision-making.” Using Yearly Day-Night Average Sound Level (DNL) as a measure of noise acceptability, the document states that “undue interference with activity and annoyance” will not occur if *outdoor* noise levels in residential areas are below DNL 55 dB and *indoor* levels are below DNL 45 dB. These thresholds include an “adequate margin of safety” as the document title indicates.

- **Department of Housing and Urban Development (HUD)**—HUD guidelines for the acceptability of residential land use are set forth in the Code of Federal Regulations Title 24, Part 51, “Environmental Criteria and Standards.” The guidelines identify a noise exposure of DNL 65 dB or less as acceptable, between 65 and 75 dB as normally acceptable if appropriate sound attenuation is provided, and above DNL 75 dB as unacceptable. The goal for interior noise levels is DNL 45 dB. These guidelines apply only to new construction supported by HUD grants and are not binding upon local communities.

- **Department of Defense Air Installations Compatibility Use Zones (AICUZ) Program**—The AICUZ Program was established by the DOD in response to growing incompatible urban development around military airfields. DOD Instruction Number 4165.57 (November 8, 1977) provides the overall guidance for the program and mandates preparation of an AICUZ plan for each installa-
Each of the military services has its own individual guidelines for implementing the basic instructions. The Air Force guidelines, for example, are defined in Air Force Instruction 32-7063, *Air Installation Compatible Use Zone Program* (April 17, 2002) and Air Force Handbook 32-7084, *AICUZ Program Manager's Guide* (March 1, 1999). The Air Force publications describe the two objectives of the AICUZ program as being: to assist local, regional, state, and federal agencies in protecting public health, safety, and welfare by promoting compatible development within the area of influence of military installations; and to protect Air Force operational capability from the effects of land uses which are incompatible with aircraft operations. AICUZ plans prepared for individual military airfields serve as recommendations to local land use jurisdictions, but have no regulatory function.

Each AICUZ plan delineates the installation’s area of influence with respect to height limitations for airspace protection, accident potential, and noise. FAR Part 77 is used for airspace protection criteria. For safety compatibility, three accident potential zones (APZs) are defined: a clear zone (equivalent to the RPZ at civilian airports), and APZs I and II. These zones extend a total of 15,000 feet beyond the ends of runways. Noise contours using the DNL metric, or CNEL in California, indicate the extent of noise impacts. Land use compatibility guidelines are provided with respect to each of these factors. Residential development is considered incompatible within all three APZs except for low-density development in APZ II, as well as within all noise contours above 65 dB.

**> Department of Defense Joint Land Use Study (JLUS) Program**—In 1985, congress authorized the DOD to make available community planning assistance grants (Title 10 U.S.C. Section 2391) to state and local government to help better understand and incorporate the AICUZ technical data into local planning programs. The Office of Economic Adjustment (OEA) manages the JLUS program. A JLUS is a cooperative land use planning effort between the affected local government and the military installation. The JLUS presents a rationale, justification, and a policy framework to support the adoption and implementation of recommended compatible development criteria. These measures are designed to prevent urban encroachment; safeguard the military mission; and protect the public health, safety, and welfare.

**State of California Policies**

Unlike with federal government policies that are merely advisory as airport land use compatibility planning guidelines, some elements of state policy are regulatory in nature.

**State Aeronautics Act**

The California State Aeronautics Act—Division 9, Part 1 of the California Public Utilities Code—provides the policy guidance most directly relevant to compatibility planning. Three portions of the act are of particular interest. One, beginning with Section 21670, establishes requirements for airport land use compatibility planning around each public-use and military airport in the state and the creation of an airport land use commission in most counties. Another—Section 21669—requires the State Department of Transportation to adopt, to an extent not prohibited by federal law, noise standards applicable to all airports operating under a state permit. A third effectively makes FAR Part 77 a state law.

**> Airport Land Use Commission Statutes**—Although numerous changes have been made to the ALUC statutes over the years, the basic requirements for the establishment of ALUCs and the preparation of airport land use compatibility plans have been in place since the law’s enactment in 1967.
The fundamental purpose of ALUCs to promote land use compatibility around airports has remained unchanged. As expressed in the present statutes, this purpose is:

“...to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public’s exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.”

As noted in the introduction to this chapter, the focus of the ALUC statutes is on the process of compatibility planning. Compatibility criteria are not defined. Rather, reference is made to other sources of compatibility criteria, specifically:

- The preamble to the law indicates that one of the purposes is “to promote the overall goals and objectives of the California airport noise standards adopted pursuant to Section 21669” i.e., the California Airport Noise Regulations.

- Section 21674.7 requires that, when adopting or amending a compatibility plan, ALUCs “be guided by” information contained in the Airport Land Use Planning Handbook. This section further states that “prior to granting permits for the renovation or remodeling of an existing building, structure, or facility, and before the construction of a new building, it is the intent of the Legislature that local agencies shall be guided by the height, use, noise, safety, and density criteria that are compatible with airport operations” as outlined in the Handbook. Highlights of the compatibility criteria set forth in the Handbook are included later in this chapter.

- With regard to military airports, Section 21675(b) states that ALUCs must prepare a compatibility plan for them and that such plans “shall be consistent with the safety and noise standards in the Air Installation Compatible Use Zone [plan] prepared for that military airport.”

With respect to the compatibility planning process, two sections of the law are particularly significant to local land use agencies:

- ALUC authority is limited to “areas not already devoted to incompatible uses.” This phrase is generally taken to mean that ALUCs have no authority over existing land uses. However, changing an incompatible land use in a manner that would make it more incompatible is considered to be within the jurisdiction of ALUCs.

- Section 21676 describes the types of land use actions that must be submitted to an ALUC for review. These actions include adoption or amendment of a general plan or zoning ordinance. Section 21676.5 indicates that until such time as a local agency’s general plan has been made consistent with the ALUC’s plan, the ALUC may require the local agency to submit all “actions, regulations, and permits” for review. After the agency’s general plan has been deemed consistent, then these additional actions are not subject to ALUC review unless agreed upon between the agency and the ALUC.

California Airport Noise Regulations—The airport noise standards promulgated in accordance with the State Aeronautics Act are set forth in Section 5000 et seq. of the California Code of Regulations (Title 21, Division 2.5, and Chapter 6). The regulations establish criteria under which a county board of supervisors can declare an airport as having a “noise problem.” The specifics of the regulations are applicable only to a few, primarily major airline, airports that have been declared as having a noise problem. Nevertheless, some of the provisions are of interest in a nonregulatory manner to other airports.

Most relevant are the criteria that define what are considered incompatible land uses with respect to noise. Section 5006 states that:
“The level of noise acceptable to a reasonable person residing in the vicinity of an airport is established as a community noise equivalent level (CNEL) value of 65 dB for purposes of these regulations. This criterion level has been chosen for reasonable persons residing in urban residential areas where houses are of typical California construction and may have windows partially open. It has been selected with reference to speech, sleep and community reaction.”

Of particular note in the above is that the CNEL 65 dB criterion has been set specifically with respect to urban residential areas. The regulations provide no guidance with respect to other community settings.

Four types of land uses are defined as incompatible within the CNEL 65 dB contour:

- Residences of all types;
- Public and private schools;
- Hospitals and convalescent homes; and
- Churches, synagogues, temples, and other places of worship.

However, these uses are not deemed incompatible if any of several mitigative actions has been taken as spelled out in Section 5014. Among these measures are airport acquisition of an avigation easement for aircraft noise and, except for some residential uses, acoustical insulation adequate to ensure that the interior CNEL due to aircraft noise is 45 dB or less in all habitable rooms.

- Regulation of Obstructions—Section 21659 gives the state authority to enforce the standards set by FAR Part 77. No structure or tree is permitted to reach a height that exceeds FAR Part 77 obstruction standards unless the FAA has determined that the object would not constitute a hazard to air navigation or create an unsafe condition for flight.

Other State Regulations

Additional state regulations having a bearing on airport land use compatibility planning include the following:

- Government Code—Section 65302.3 requires that local agencies must either modify their general plans and any applicable specific plans to be consistent with the compatibility plan adopted by an ALUC or take the steps indicated in Public Utilities Code Section 21676 to overrule the ALUC. The local plans are to be amended within 180 days of when the ALUC plan is adopted or amended.

- California Building Code—California Code of Regulations Title 24, known as the California Building Code, contains standards for allowable interior noise levels associated with exterior noise sources. The standards apply to new hotels, motels, dormitories, apartment houses, and dwellings other than detached single-family residences.

The standards state that:

“Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either the Day-Night Average Sound Level (L_{dn}) or the Community Noise Equivalent Level (CNEL), consistent with the noise element of the local general plan. Worst-case noise levels, either existing or future, shall be used as the basis for determining compliance with [these standards]. Future noise levels shall be predicted for a period of at least 10 years from the time of building permit application.”
With regard to airport noise sources, the code goes on to indicate that:

“Residential structures to be located where the annual L_{dn} or CNEL exceeds 60 dB shall require an acoustical analysis showing that the proposed design will achieve the prescribed allowable interior level. For public use airports or heliports, the L_{dn} or CNEL shall be determined from the airport land use plan prepared by the county wherein the airport is located. For military bases, the L_{dn} shall be determined from the facility Air Installation Compatible Use Zone (AICUZ) plan. For all other airports or heliports, or public use airports or heliports for which a land use plan has not been developed, the L_{dn} or CNEL shall be determined from the noise element of the general plan of the local jurisdiction. When aircraft noise is not the only significant source, noise levels from all sources shall be added to determine the composite site noise level.”

**Real Estate Disclosure Laws**—State legislation that took effect in January 2004 (Building and Professions Code Section 11010 and Government Code Sections 1103 and 1353) requires that the presence of an airport nearby be disclosed as part of residential real estate transactions. For all new subdivisions plus those existing residences located where other hazards (flood, fire, and earthquake) are present. This requirement applies within the airport influence area as defined by the airport land use commission in the county. The law provides the following specific language to be used in the disclosure:

“This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.”

**State Education Code**—Provisions of the Education Code applying to elementary and secondary schools (Section 17215) and community colleges (Section 81033) require the California Division of Aeronautics to review proposals for acquisition of a school site situated within two miles of an existing or planned airport runway. The Division must then investigate the proposed site and report back to the Department of Education its recommendations as to whether the site should be acquired for school purposes. The Division is also required to establish criteria to be used in this review process.

**General Plan Guidelines**—Section 65302(f) of the California Government Code, requires that a noise element be included as part of local general plans. Airports and heliports are among the noise sources specifically to be analyzed. To the extent practical, both current and future noise contours (expressed in terms of either CNEL or DNL) are to be included. The noise contours are to be “used as a guide for establishing a pattern of land uses … that minimizes the exposure of community residents to excessive noise.”

Guidance on the preparation and content of general plan noise elements is provided by the Office of Planning and Research in its *General Plan Guidelines* publication (last revised in 2003). This guidance represents an updated version of guidelines originally published by the State Department of Health Services in 1976. Included in the document is a table indicating noise compatibility criteria for a variety of land use categories. Another table outlines a set of adjustment or “normalization” factors that “may be used in order to arrive at noise acceptability standards which reflect the noise control goals of the community, the particular community’s sensitivity to noise…, and their assessment of the relative importance of noise pollution.”
Airport Land Use Planning Handbook

Drawing from original research and a variety of other sources such as those described in this appendix, the 2011 edition of the California Airport Land Use Planning Handbook provides an extensive amount of information upon which local airport land use compatibility criteria can be based. Indeed, as noted earlier herein, local compatibility planning must “be guided by” the information in the Handbook. On most topics, the Handbook provides a significant degree of latitude in setting compatibility criteria to best suit the characteristics of a particular airport and its environs. Moreover, agencies can deviate from this guidance where there is strong rationale for doing so and compliance with the basic objectives of the statutes can still be demonstrated.

The Handbook discussion of compatibility issues is divided into chapters on noise and safety. The noise discussion includes overflight issues and safety includes airspace protection. A few highlights are worth noting.

► **Noise**—The Handbook notes that CNEL 65 dB is the maximum noise level normally compatible with urban residential land uses, but that this level is too high for many airports. The “normalization” process is cited as a means for adjusting this criterion to reflect community characteristics. Additional factors to be considered are listed in Table 7C.

► **Overflight**—Overflight concerns are addressed in terms of the need for buyer awareness measures and avoidance of particularly noise-sensitive land uses.

► **Safety**—Safety compatibility guidelines in the Handbook utilize accident location data to identify the areas of greatest risk near runways. Several sample sets of safety zones are depicted along with suggested maximum residential density and nonresidential intensity criteria. Distinctions between rural, suburban, and urban settings are taken into account in these criteria.

► **Airspace Protection**—The criteria for this topic stem directly from FAR Part 77 standards for avoidance of airspace obstructions and other FAA regulations with respect to bird strike concerns and other hazards to flight.

Article 3.5—Airport Land Use Commission

21670. Creation; Membership; Selection

(a) The Legislature hereby finds and declares that:

(1) It is in the public interest to provide for the orderly development of each public use airport in this state and the area surrounding these airports so as to promote the overall goals and objectives of the California airport noise standards adopted pursuant to Section 21669 and to prevent the creation of new noise and safety problems.

(2) It is the purpose of this article to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public’s exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses.

(b) In order to achieve the purposes of this article, every county in which there is located an airport which is served by a scheduled airline shall establish an airport land use commission. Every county, in which there is located an airport which is not served by a scheduled airline, but is operated for the benefit of the general public, shall establish an airport land use commission, except that the board of supervisors of the county may, after consultation with the appropriate airport operators and affected local entities and after a public hearing, adopt a resolution finding that there are no noise, public safety, or land use issues affecting any airport in the county which require the creation of a commission and declaring the county exempt from that requirement. The board shall, in this event, transmit a copy of the resolution to the Director of Transportation. For purposes of this section, “commission” means an airport land use commission. Each commission shall consist of seven members to be selected as follows:

(1) Two representing the cities in the county, appointed by a city selection committee comprised of the mayors of all the cities within that county, except that if there are any cities contiguous or adjacent to the qualifying airport, at least one representative shall be appointed therefrom. If there are no cities within a county, the number of representatives provided for by paragraphs (2) and (3) shall each be increased by one.

(2) Two representing the county, appointed by the board of supervisors.

(3) Two having expertise in aviation, appointed by a selection committee comprised of the managers of all of the public airports within that county.

(4) One representing the general public, appointed by the other six members of the commission.

(c) Public officers, whether elected or appointed, may be appointed and serve as members of the commission during their terms of public office.
(d) Each member shall promptly appoint a single proxy to represent him or her in commission affairs and to vote on all matters when the member is not in attendance. The proxy shall be designated in a signed written instrument which shall be kept on file at the commission offices, and the proxy shall serve at the pleasure of the appointing member. A vacancy in the office of proxy shall be filled promptly by appointment of a new proxy.

(e) A person having an “expertise in aviation” means a person who, by way of education, training, business, experience, vocation, or avocation has acquired and possesses particular knowledge of, and familiarity with, the function, operation, and role of airports, or is an elected official of a local agency which owns or operates an airport.

(f) It is the intent of the Legislature to clarify that, for the purposes of this article that special districts, school districts and community college districts are included among the local agencies that are subject to airport land use laws and other requirements of this article.

21670.1. Action by Designated Body Instead of Commission

(a) Notwithstanding any other provision of this article, if the board of supervisors and the city selection committee of mayors in the county each makes a determination by a majority vote that proper land use planning can be accomplished through the actions of an appropriately designated body, then the body so designated shall assume the planning responsibilities of an airport land use commission as provided for in this article, and a commission need not be formed in that county.

(b) A body designated pursuant to subdivision (a) that does not include among its membership at least two members having expertise in aviation, as defined in subdivision (e) of Section 21670, shall, when acting in the capacity of an airport land use commission, be augmented so that body, as augmented, will have at least two members having that expertise. The commission shall be constituted pursuant to this section on and after March 1, 1988.

(c) (1) Notwithstanding subdivisions (a) and (b), and subdivision (b) of Section 21670, if the board of supervisors of a county and each affected city in that county each makes a determination that proper land use planning pursuant to this article can be accomplished pursuant to this subdivision, then a commission need not be formed in that county.

(2) If the board of supervisors of a county and each affected city makes a determination that proper land use planning may be accomplished and a commission is not formed pursuant to paragraph (1), that county and the appropriate affected cities having jurisdiction over an airport, subject to the review and approval by the Division of Aeronautics of the department, shall do all of the following:

(A) Adopt processes for the preparation, adoption, and amendment of the airport land use compatibility plan for each airport that is served by a scheduled airline or operated for the benefit of the general public.

(B) Adopt processes for the notification of the general public, landowners, interested groups, and other public agencies regarding the preparation, adoption, and amendment of the airport land use compatibility plans.

(C) Adopt processes for the mediation of disputes arising from the preparation, adoption, and amendment of the airport land use compatibility plans.

(D) Adopt processes for the amendment of general and specific plans to be consistent with the airport land use compatibility plans.

(E) Designate the agency that shall be responsible for the preparation, adoption, and amendment of each airport land use compatibility plan.
(3) The Division of Aeronautics of the department shall review the processes adopted pursuant to paragraph (2), and shall approve the processes if the division determines that the processes are consistent with the procedure required by this article and will do all of the following:

(A) Result in the preparation, adoption, and implementation of plans within a reasonable amount of time.

(B) Rely on the height, use, noise, safety, and density criteria that are compatible with airport operations, as established by this article, and referred to as the Airport Land Use Planning Handbook, published by the division, and any applicable federal aviation regulations, including, but not limited to, Part 77 (commencing with Section 77.1) of Title 14 of the Code of Federal Regulations.

(C) Provide adequate opportunities for notice to, review of, and comment by the general public, landowners, interested groups, and other public agencies.

(4) If the county does not comply with the requirements of paragraph (2) within 120 days, then the airport land use compatibility plan and amendments shall not be considered adopted pursuant to this article and a commission shall be established within 90 days of the determination of noncompliance by the division and an airport land use compatibility plan shall be adopted pursuant to this article within 90 days of the establishment of the commission.

d) A commission need not be formed in a county that has contracted for the preparation of airport land use compatibility plans with the Division of Aeronautics under the California Aid to Airports Program (Chapter 4 (commencing with Section 4050) of Title 21 of the California Code of Regulations), Project Ker-VAR 90-1, and that submits all of the following information to the Division of Aeronautics for review and comment that the county and the cities affected by the airports within the county, as defined by the airport land use compatibility plans:

(1) Agree to adopt and implement the airport land use compatibility plans that have been developed under contract.

(2) Incorporate the height, use, noise, safety, and density criteria that are compatible with airport operations as established by this article, and referred to as the Airport Land Use Planning Handbook, published by the division, and any applicable federal aviation regulations, including, but not limited to, Part 77 (commencing with Section 77.1) of Title 14 of the Code of Federal Regulations as part of the general and specific plans for the county and for each affected city.

(3) If the county does not comply with this subdivision on or before May 1, 1995, then a commission shall be established in accordance with this article.

e) (1) A commission need not be formed in a county if all of the following conditions are met:

(A) The county has only one public use airport that is owned by a city.

(B) (i) The county and the affected city adopt the elements in paragraph (2) of subdivision (d), as part of their general and specific plans for the county and the affected city.

(ii) The general and specific plans shall be submitted, upon adoption, to the Division of Aeronautics. If the county and the affected city do not submit the elements specified in paragraph (2) of subdivision (d), on or before May 1, 1996, then a commission shall be established in accordance with this article.
21670.2. Application to Counties Having over 4 Million in Population

(a) Sections 21670 and 21670.1 do not apply to the County of Los Angeles. In that county, the county regional planning commission has the responsibility for coordinating the airport planning of public agencies within the county. In instances where impasses result relative to this planning, an appeal may be made to the county regional planning commission by any public agency involved. The action taken by the county regional planning commission on an appeal may be overruled by a four-fifths vote of the governing body of a public agency whose planning led to the appeal.

(b) By January 1, 1992, the county regional planning commission shall adopt the airport land use compatibility plans required pursuant to Section 21675.

(c) Sections 21675.1, 21675.2, and 21679.5 do not apply to the County of Los Angeles until January 1, 1992. If the airport land use compatibility plans required pursuant to Section 21675 are not adopted by the county regional planning commission by January 1, 1992, Sections 21675.1 and 21675.2 shall apply to the County of Los Angeles until the airport land use compatibility plans are adopted.

21670.3 San Diego County

(a) Sections 21670 and 21670.1 do not apply to the County of San Diego. In that county, the San Diego County Regional Airport Authority, as established pursuant to Section 170002, shall be responsible for the preparation, adoption, and amendment of an airport land use compatibility plan for each airport in San Diego County.

(b) The San Diego County Regional Airport Authority shall engage in a public collaborative planning process when preparing and updating an airport land use compatibility plan.

21670.4. Intercounty Airports

(a) As used in this section, “intercounty airport” means any airport bisected by a county line through its runways, runway protection zones, inner safety zones, inner turning zones, outer safety zones, or sideline safety zones, as defined by the department’s Airport Land Use Planning Handbook and referenced in the airport land use compatibility plan formulated under Section 21675.

(b) It is the purpose of this section to provide the opportunity to establish a separate airport land use commission so that an intercounty airport may be served by a single airport land use planning agency, rather than having to look separately to the airport land use commissions of the affected counties.

(c) In addition to the airport land use commissions created under Section 21670 or the alternatives established under Section 21670.1, for their respective counties, the boards of supervisors and city selection committees for the affected counties, by independent majority vote of each county’s two delegations, for any intercounty airport, may do either of the following:

(1) Establish a single separate airport land use commission for that airport. That commission shall consist of seven members to be selected as follows:

(A) One representing the cities in each of the counties, appointed by that county’s city selection committee.

(B) One representing each of the counties, appointed by the board of supervisors of each county.
(C) One from each county having expertise in aviation, appointed by a selection committee comprised of the managers of all the public airports within that county.

(D) One representing the general public, appointed by the other six members of the commission.

(2) In accordance with subdivision (a) or (b) of Section 21670.1, designate an existing appropriate entity as that airport’s land use commission.

21670.6. Court and Mediation Proceedings

Any action brought in the superior court relating to this article may be subject to mediation proceeding conducted pursuant to Chapter 9.3 (commencing with Section 66030) of Division I of Title 7 of the Government Code.

21671. Airports Owned by a City, District or County

In any county where there is an airport operated for the general public which is owned by a city or district in another county or by another county, one of the representatives provided by paragraph (1) of subdivision (b) of Section 21670 shall be appointed by the city selection committee of mayors of the cities of the county in which the owner of that airport is located, and one of the representatives provided by paragraph (2) subdivision (b) of Section 21670 shall be appointed by the board of supervisors of the county in which the owner of that airport is located.

21671.5. Term of Office

(a) Except for the terms of office of the members of the first commission, the term of office of each member shall be four years and until the appointment and qualification of his or her successor. The members of the first commission shall classify themselves by lot so that the term of office of one member is one year, of two members is two years, of two members is three years, and of two members is four years. The body that originally appointed a member whose term has expired shall appoint his or her successor for a full term of four years. Any member may be removed at any time and without cause by the body appointing that member. The expiration date of the term of office of each member shall be the first Monday in May in the year in which that member’s term is to expire. Any vacancy in the membership of the commission shall be filled for the unexpired term by appointment by the body which originally appointed the member whose office has become vacant. The chairperson of the commission shall be selected by the members thereof.

(b) Compensation, if any, shall be determined by the board of supervisors.

(c) Staff assistance, including the mailing of notices and the keeping of minutes and necessary quarters, equipment, and supplies, shall be provided by the county. The usual and necessary operating expenses of the commission shall be a county charge.

(d) Notwithstanding any other provisions of this article, the commission shall not employ any personnel either as employees or independent contractors without the prior approval of the board of supervisors.

(e) The commission shall meet at the call of the commission chairperson or at the request of the majority of the commission members. A majority of the commission members shall constitute a quorum for the transaction of business. No action shall be taken by the commission except by the recorded vote of a majority of the full membership.
(f) The commission may establish a schedule of fees necessary to comply with this article. Those fees shall be charged to the proponents of actions, regulations, or permits, shall not exceed the estimated reasonable cost of providing the service, and shall be imposed pursuant to Section 66016 of the Government Code. Except as provided in subdivision (g), after June 30, 1991, a commission that has not adopted the airport land use compatibility plan required by Section 21675 shall not charge fees pursuant to this subdivision until the commission adopts the plan.

(g) In any county that has undertaken by contract or otherwise completed airport land use compatibility plans for at least one-half of all public use airports in the county, the commission may continue to charge fees necessary to comply with this article until June 30, 1992, and, if the airport land use compatibility plans are complete by that date, may continue charging fees after June 30, 1992. If the airport land use compatibility plans are not complete by June 30, 1992, the commission shall not charge fees pursuant to subdivision (f) until the commission adopts the land use plans.

21672. Rules and Regulations

Each commission shall adopt rules and regulations with respect to the temporary disqualification of its members from participating in the review or adoption of a proposal because of conflict of interest and with respect to appointment of substitute members in such cases.

21673. Initiation of Proceedings for Creation by Owner of Airport

In any county not having a commission or a body designated to carry out the responsibilities of a commission, any owner of a public airport may initiate proceedings for the creation of a commission by presenting a request to the board of supervisors that a commission be created and showing the need therefor to the satisfaction of the board of supervisors.

21674. Powers and Duties

The commission has the following powers and duties, subject to the limitations upon its jurisdiction set forth in Section 21676:

(a) To assist local agencies in ensuring compatible land uses in the vicinity of all new airports and in the vicinity of existing airports to the extent that the land in the vicinity of those airports is not already devoted to incompatible uses.

(b) To coordinate planning at the state, regional, and local levels so as to provide for the orderly development of air transportation, while at the same time protecting the public health, safety, and welfare.

(c) To prepare and adopt an airport land use compatibility plan pursuant to Section 21675.

(d) To review the plans, regulations, and other actions of local agencies and airport operators pursuant to Section 21676.

(e) The powers of the commission shall in no way be construed to give the commission jurisdiction over the operation of any airport.

(f) In order to carry out its responsibilities, the commission may adopt rules and regulations consistent with this article.
21674.5. Training of Airport Land Use Commission's Staff

(a) The Department of Transportation shall develop and implement a program or programs to assist in the training and development of the staff of airport land use commissions, after consulting with airport land use commissions, cities, counties, and other appropriate public entities.

(b) The training and development program or programs are intended to assist the staff of airport land use commissions in addressing high priority needs, and may include, but need not be limited to, the following:

1. The establishment of a process for the development and adoption of airport land use compatibility plans.
2. The development of criteria for determining the airport influence area.
3. The identification of essential elements that should be included in the airport land use compatibility plans.
4. Appropriate criteria and procedures for reviewing proposed developments and determining whether proposed developments are compatible with the airport use.
5. Any other organizational, operational, procedural, or technical responsibilities and functions that the department determines to be appropriate to provide to commission staff and for which it determines there is a need for staff training or development.

(c) The department may provide training and development programs for airport land use commission staff pursuant to this section by any means it deems appropriate. Those programs may be presented in any of the following ways:

1. By offering formal courses or training programs.
2. By sponsoring or assisting in the organization and sponsorship of conferences, seminars, or other similar events.
3. By producing and making available written information.
4. Any other feasible method of providing information and assisting in the training and development of airport land use commission staff.

21674.7. Airport Land Use Planning Handbook

(a) An airport land use commission that formulates, adopts or amends an airport land use compatibility plan shall be guided by information prepared and updated pursuant to Section 21674.5 and referred to as the Airport Land Use Planning Handbook published by the Division of Aeronautics of the Department of Transportation.

(b) It is the intent of the Legislature to discourage incompatible land uses near existing airports. Therefore, prior to granting permits for the renovation or remodeling of an existing building, structure, or facility, and before the construction of a new building, it is the intent of the Legislature that local agencies shall be guided by the height, use, noise, safety, and density criteria that are compatible with airport operations, as established by this article, and referred to as the Airport Land Use Planning Handbook, published by the division, and any applicable federal aviation regulations, including, but not limited to, Part 77 (commencing with Section 77.1) of Title 14 of the Code of Federal Regulations, to the extent that the criteria has been incorporated into the plan prepared by a commission pursuant to Section 21675. This subdivision does not limit the jurisdiction of a commission as established by this article. This subdivision does not limit the
21675. Land Use Plan

(a) Each commission shall formulate an airport land use compatibility plan that will provide for the orderly growth of each public airport and the area surrounding the airport within the jurisdiction of the commission, and will safeguard the general welfare of the inhabitants within the vicinity of the airport and the public in general. The commission airport land use compatibility plan shall include and shall be based on a long-range master plan or an airport layout plan, as determined by the Division of Aeronautics of the Department of Transportation that reflects the anticipated growth of the airport during at least the next 20 years. In formulating an airport land use compatibility plan, the commission may develop height restrictions on buildings, specify use of land, and determine building standards, including soundproofing adjacent to airports, within the airport influence area. The airport land use compatibility plan shall be reviewed as often as necessary in order to accomplish its purposes, but shall not be amended more than once in any calendar year.

(b) The commission shall include, within its airport land use compatibility plan formulated pursuant to subdivision (a), the area within the jurisdiction of the commission surrounding any military airport for all of the purposes specified in subdivision (a). The airport land use compatibility plan shall be consistent with the safety and noise standards in the Air Installation Compatible Use Zone prepared for that military airport. This subdivision does not give the commission any jurisdiction or authority over the territory or operations of any military airport.

(c) The airport influence area shall be established by the commission after hearing and consultation with the involved agencies.

(d) The commission shall submit to the Division of Aeronautics of the department one copy of the airport land use compatibility plan and each amendment to the plan.

(e) If an airport land use compatibility plan does not include the matters required to be included pursuant to this article, the Division of Aeronautics of the department shall notify the commission responsible for the plan.

21675.1. Adoption of Land Use Plan

(a) By June 30, 1991, each commission shall adopt the airport land use compatibility plan required pursuant to Section 21675, except that any county that has undertaken by contract or otherwise completed airport land use compatibility plans for at least one-half of all public use airports in the county, shall adopt that airport land use compatibility plan on or before June 30, 1992.

(b) Until a commission adopts an airport land use compatibility plan, a city or county shall first submit all actions, regulations, and permits within the vicinity of a public airport to the commission for review and approval. Before the commission approves or disapproves any actions, regulations, or permits, the commission shall give public notice in the same manner as the city or county is required to give for those actions, regulations, or permits. As used in this section, “vicinity” means land that will be included or reasonably could be included within the airport land use compatibility plan. If the commission has not designated an airport influence area for the airport land use compatibility plan, then “vicinity” means land within two miles of the boundary of a public airport.

(c) The commission may approve an action, regulation, or permit if it finds, based on substantial evidence in the record, all of the following:

authority of local agencies to overrule commission actions or recommendations pursuant to Sections 21676, 21676.5, or 21677.
(1) The commission is making substantial progress toward the completion of the airport land use compatibility plan.

(2) There is a reasonable probability that the action, regulation, or permit will be consistent with the airport land use compatibility plan being prepared by the commission.

(3) There is little or no probability of substantial detriment to or interference with the future adopted airport land use compatibility plan if the action, regulation, or permit is ultimately inconsistent with the airport land use compatibility plan.

(d) If the commission disapproves an action, regulation, or permit, the commission shall notify the city or county. The city or county may overrule the commission, by a two-thirds vote of its governing body, if it makes specific findings that the proposed action, regulation, or permit is consistent with the purposes of this article, as stated in Section 21670.

(e) If a city or county overrules the commission pursuant to subdivision (d), that action shall not relieve the city or county from further compliance with this article after the commission adopts the airport land use compatibility plan.

(f) If a city or county overrules the commission pursuant to subdivision (d) with respect to a publicly owned airport that the city or county does not operate, the operator of the airport is not liable for damages to property or personal injury resulting from the city’s or county’s decision to proceed with the action, regulation, or permit.

(g) A commission may adopt rules and regulations that exempt any ministerial permit for single-family dwellings from the requirements of subdivision (b) if it makes the findings required pursuant to subdivision (c) for the proposed rules and regulations, except that the rules and regulations may not exempt either of the following:

1. More than two single-family dwellings by the same applicant within a subdivision prior to June 30, 1991.

2. Single-family dwellings in a subdivision where 25 percent or more of the parcels are undeveloped.

**21675.2. Approval or Disapproval of Actions, Regulations, or Permits**

(a) If a commission fails to act to approve or disapprove any actions, regulations, or permits within 60 days of receiving the request pursuant to Section 21675.1, the applicant or his or her representative may file an action pursuant to Section 1094.5 of the Code of Civil Procedure to compel the commission to act, and the court shall give the proceedings preference over all other actions or proceedings, except previously filed pending matters of the same character.

(b) The action, regulation, or permit shall be deemed approved only if the public notice required by this subdivision has occurred. If the applicant has provided seven days advance notice to the commission of the intent to provide public notice pursuant to this subdivision, then, not earlier than the date of the expiration of the time limit established by Section 21675.1, an applicant may provide the required public notice. If the applicant chooses to provide public notice, that notice shall include a description of the proposed action, regulation, or permit substantially similar to the descriptions which are commonly used in public notices by the commission, the location of any proposed development, the application number, the name and address of the commission, and a statement that the action, regulation, or permit shall be deemed approved if the commission has not acted within 60 days. If the applicant has provided the public notice specified in this subdivision, the time limit for action by the commission shall be extended to 60 days after the
public notice is provided. If the applicant provides notice pursuant to this section, the commission shall refund to the applicant any fees which were collected for providing notice and which were not used for that purpose.

(c) Failure of an applicant to submit complete or adequate information pursuant to Sections 65943 to 65946, inclusive, of the Government Code, may constitute grounds for disapproval of actions, regulations, or permits.

(d) Nothing in this section diminishes the commission’s legal responsibility to provide, where applicable, public notice and hearing before acting on an action, regulation, or permit.

21676. Review of Local General Plans

(a) Each local agency whose general plan includes areas covered by an airport land use compatibility plan shall, by July 1, 1983, submit a copy of its plan or specific plans to the airport land use commission. The commission shall determine by August 31, 1983, whether the plan or plans are consistent or inconsistent with the airport land use compatibility plan. If the plan or plans are inconsistent with the airport land use compatibility plan, the local agency shall be notified and that local agency shall have another hearing to reconsider its airport land use compatibility plans. The local agency may propose to overrule the commission after the hearing by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670. At least 45 days prior to the decision to overrule the commission, the local agency governing body shall provide the commission and the division a copy of the proposed decision and findings. The commission and the division may provide comments to the local agency governing body within 30 days of receiving the proposed decision and findings. If the commission or the division’s comments are not available within this time limit, the local agency governing body may act without them. The comments by the division or the commission are advisory to the local agency governing body. The local agency governing body shall include comments from the commission and the division in the final record of any final decision to overrule the commission, which may only be adopted by a two-thirds vote of the governing body.

(b) Prior to the amendment of a general plan or specific plan, or the adoption or approval of a zoning ordinance or building regulation within the planning boundary established by the airport land use commission pursuant to Section 21675, the local agency shall first refer the proposed action to the commission. If the commission determines that the proposed action is inconsistent with the commission’s plan, the referring agency shall be notified. The local agency may, after a public hearing, propose to overrule the commission by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670. At least 45 days prior to the decision to overrule the commission, the local agency governing body shall provide the commission and the division a copy of the proposed decision and findings. The commission and the division may provide comments to the local agency governing body within 30 days of receiving the proposed decision and findings. If the commission or the division’s comments are not available within this time limit, the local agency governing body may act without them. The comments by the division or the commission are advisory to the local agency governing body. The local agency governing body shall include comments from the commission and the division in the public record of any final decision to overrule the commission, which may only be adopted by a two-thirds vote of the governing body.

(c) Each public agency owning any airport within the boundaries of an airport land use compatibility plan shall, prior to modification of its airport master plan, refer any proposed change to the airport
land use commission. If the commission determines that the proposed action is inconsistent with the commission’s plan, the referring agency shall be notified. The public agency may, after a public hearing, propose to overrule the commission by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article stated in Section 21670. At least 45 days prior to the decision to overrule the commission, the public agency governing body shall provide the commission and the division a copy of the proposed decision and findings. The commission and the division may provide comments to the public agency governing body within 30 days of receiving the proposed decision and findings. If the commission or the division’s comments are not available within this time limit, the public agency governing body may act without them. The comments by the division or the commission are advisory to the public agency governing body. The public agency governing body shall include comments from the commission and the division in the final decision to overrule the commission, which may only be adopted by a two-thirds vote of the governing body.

(d) Each commission determination pursuant to subdivision (b) or (c) shall be made within 60 days from the date of referral of the proposed action. If a commission fails to make the determination within that period, the proposed action shall be deemed consistent with the airport land use compatibility plan.

21676.5. Review of Local Plans

(a) If the commission finds that a local agency has not revised its general plan or specific plan or overruled the commission by a two-thirds vote of its governing body after making specific findings that the proposed action is consistent with the purposes of this article as stated in Section 21670, the commission may require that the local agency submit all subsequent actions, regulations, and permits to the commission for review until its general plan or specific plan is revised or the specific findings are made. If, in the determination of the commission, an action, regulation, or permit of the local agency is inconsistent with the airport land use compatibility plan, the local agency shall be notified and that local agency shall hold a hearing to reconsider its plan. The local agency may propose to overrule the commission after the hearing by a two-thirds vote of its governing body if it makes specific findings that the proposed action is consistent with the purposes of this article as stated in Section 21670. At least 45 days prior to the decision to overrule the commission, the local agency governing body shall provide the commission and the division a copy of the proposed decision and findings. The commission and the division may provide comments to the local agency governing body within 30 days of receiving the proposed decision and findings. If the commission or the division’s comments are not available within this time limit, the local agency governing body may act without them. The comments by the division or the commission are advisory to the local agency governing body. The local agency governing body shall include comments from the commission and the division in the final decision to overrule the commission, which may only be adopted by a two-thirds vote of the governing body.

(b) Whenever the local agency has revised its general plan or specific plan or has overruled the commission pursuant to subdivision (a), the proposed action of the local agency shall not be subject to further commission review, unless the commission and the local agency agree that individual projects shall be reviewed by the commission.

21677. Marin County Override Provisions

Notwithstanding the two-thirds vote required by Section 21676, any public agency in the County of Marin may overrule the Marin County Airport Land Use Commission by a majority vote of its
governing body. At least 45 days prior to the decision to overrule the commission, the public agency governing body shall provide the commission and the division a copy of the proposed decision and findings. The commission and the division may provide comments to the public agency governing body within 30 days of receiving the proposed decision and findings. If the commission or the division’s comments are not available within this time limit, the public agency governing body may act without them. The comments by the division or the commission are advisory to the public agency governing body. The public agency governing body shall include comments from the commission and the division in the public record of the final decision to overrule the commission, which may be adopted by a majority vote of the governing body.

21678. **Airport Owner’s Immunity**

With respect to a publicly owned airport that a public agency does not operate, if the public agency pursuant to Section 21676, 21676.5, or 21677 overrules a commission’s action or recommendation, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the public agency’s decision to overrule the commission’s action or recommendation.

21679. **Court Review**

(a) In any county in which there is no airport land use commission or other body designated to assume the responsibilities of an airport land use commission, or in which the commission or other designated body has not adopted an airport land use compatibility plan, an interested party may initiate proceedings in a court of competent jurisdiction to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, that directly affects the use of land within one mile of the boundary of a public airport within the county.

(b) The court may issue an injunction that postpones the effective date of the zoning change, zoning variance, permit, or regulation until the governing body of the local agency that took the action does one of the following:

1. In the case of an action that is a legislative act, adopts a resolution declaring that the proposed action is consistent with the purposes of this article stated in Section 21670.

2. In the case of an action that is not a legislative act, adopts a resolution making findings based on substantial evidence in the record that the proposed action is consistent with the purposes of this article stated in Section 21670.

3. Rescinds the action.

4. Amends its action to make it consistent with the purposes of this article stated in Section 21670, and complies with either paragraph (1) or (2), whichever is applicable.

(c) The court shall not issue an injunction pursuant to subdivision (b) if the local agency that took the action demonstrates that the general plan and any applicable specific plan of the agency accomplishes the purposes of an airport land use compatibility plan as provided in Section 21675.

(d) An action brought pursuant to subdivision (a) shall be commenced within 30 days of the decision or within the appropriate time periods set by Section 21167 of the Public Resources Code, whichever is longer.
(c) If the governing body of the local agency adopts a resolution pursuant to subdivision (b) with respect to a publicly owned airport that the local agency does not operate, the operator of the airport shall be immune from liability for damages to property or personal injury from the local agency's decision to proceed with the zoning change, zoning variance, permit, or regulation.

(f) As used in this section, “interested party” means any owner of land within two miles of the boundary of the airport or any organization with a demonstrated interest in airport safety and efficiency.

21679.5. Deferral of Court Review

(a) Until June 30, 1991, no action pursuant to Section 21679 to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, directly affecting the use of land within one mile of the boundary of a public airport, shall be commenced in any county in which the commission or other designated body has not adopted an airport land use compatibility plan, but is making substantial progress toward the completion of the airport land use compatibility plan.

(b) If a commission has been prevented from adopting the airport land use compatibility plan by June 30, 1991, or if the adopted airport land use compatibility plan could not become effective, because of a lawsuit involving the adoption of the airport land use compatibility plan, the June 30, 1991 date in subdivision (a) shall be extended by the period of time during which the lawsuit was pending in a court of competent jurisdiction.

(c) Any action pursuant to Section 21679 commenced prior to January 1, 1990, in a county in which the commission or other designated body has not adopted an airport land use compatibility plan, but is making substantial progress toward the completion of the airport land use compatibility plan, which has not proceeded to final judgment, shall be held in abeyance until June 30, 1991. If the commission or other designated body adopts an airport land use compatibility plan on or before June 30, 1991, the action shall be dismissed. If the commission or other designated body does not adopt an airport land use compatibility plan on or before June 30, 1991, the plaintiff or plaintiffs may proceed with the action.

(d) An action to postpone the effective date of a zoning change, a zoning variance, the issuance of a permit, or the adoption of a regulation by a local agency, directly affecting the use of land within one mile of the boundary of a public airport for which an airport land use compatibility plan has not been adopted by June 30, 1991, shall be commenced within 30 days of June 30, 1991, or within 30 days of the decision by the local agency, or within the appropriate time periods set by Section 21167 of the Public Resources Code, whichever date is later.
21402. **Ownership; Prohibited Use of Airspace**

The ownership of the space above the land and waters of this State is vested in the several owners of the surface beneath, subject to the right of flight described in Section 21403. No use shall be made of such airspace which would interfere with such right of flight; provided that any use of property in conformity with an original zone of approach of an airport shall not be rendered unlawful by reason of a change in such zone of approach.

21403. **Lawful Flight; Flight Within Airport Approach Zone**

(a) Flight in aircraft over the land and waters of this state is lawful, unless at altitudes below those prescribed by federal authority, or unless conducted so as to be imminently dangerous to persons or property lawfully on the land or water beneath. The landing of an aircraft on the land or waters of another, without his or her consent, is unlawful except in the case of a forced landing or pursuant to Section 21662.1. The owner, lessee, or operator of the aircraft is liable, as provided by law, for damages caused by a forced landing.

(b) The landing, takeoff, or taxiing of an aircraft on a public freeway, highway, road, or street is unlawful except in the following cases:

1. A forced landing.
2. A landing during a natural disaster or other public emergency if the landing has received prior approval from the public agency having primary jurisdiction over traffic upon the freeway, highway, road, or street.
3. When the landing, takeoff, or taxiing has received prior approval from the public agency having primary jurisdiction over traffic upon the freeway, highway, road or street.

The prosecution bears the burden of proving that none of the exceptions apply to the act which is alleged to be unlawful.

(c) The right of flight in aircraft includes the right of safe access to public airports, which includes the right of flight within the zone of approach of any public airport without restriction or hazard. The zone of approach of an airport shall conform to the specifications of Part 77 of the Federal Aviation Regulations of the Federal Aviation Administration, Department of Transportation.

PUBLIC UTILITIES CODE
Division 9, Part 1
Chapter 4—Airports and Air Navigation Facilities
Article 2.7—Regulation of Obstructions
(excerpts)

21655. Proposed Site for Construction of State Building Within Two Miles of Airport Boundary

Notwithstanding any other provision of law, if the proposed site of any state building or other enclosure is within two miles, measured by air line, of that point on an airport runway, or runway proposed by an airport master plan, which is nearest the site, the state agency or office which proposes to construct the building or other enclosure shall, before acquiring title to property for the new state building or other enclosure site or for an addition to a present site, notify the Department of Transportation, in writing, of the proposed acquisition. The department shall investigate the proposed site and, within 30 working days after receipt of the notice, shall submit to the state agency or office which proposes to construct the building or other enclosure a written report of the investigation and its recommendations concerning acquisition of the site.

If the report of the department does not favor acquisition of the site, no state funds shall be expended for the acquisition of the new state building or other enclosure site, or the expansion of the present site, or for the construction of the state building or other enclosure, provided that the provisions of this section shall not affect title to real property once it is acquired.

21658. Construction of Utility Pole or Line in Vicinity of Aircraft Landing Area

No public utility shall construct any pole, pole line, distribution or transmission tower, or tower line, or substation structure in the vicinity of the exterior boundary of an aircraft landing area of any airport open to public use, in a location with respect to the airport and at a height so as to constitute an obstruction to air navigation, as an obstruction is defined in accordance with Part 77 of the Federal Aviation Regulations, Federal Aviation Administration, or any corresponding rules or regulations of the Federal Aviation Administration, unless the Federal Aviation Administration has determined that the pole, line, tower, or structure does not constitute a hazard to air navigation. This section shall not apply to existing poles, lines, towers, or structures or to the repair, replacement, or reconstruction thereof if the original height is not materially exceeded and this section shall not apply unless just compensation shall have first been paid to the public utility by the owner of any airport for any property or property rights which would be taken or damaged hereby.

21659. Hazards Near Airports Prohibited

(a) No person shall construct or alter any structure or permit any natural growth to grow at a height which exceeds the obstruction standards set forth in the regulations of the Federal Aviation Administration relating to objects affecting navigable airspace contained in Title 14 of the Code of Federal Regulations, Part 77, Subpart C, unless a permit allowing the construction, alteration, or growth is issued by the department.
(b) The permit is not required if the Federal Aviation Administration has determined that the construction, alteration, or growth does not constitute a hazard to air navigation or would not create an unsafe condition for air navigation. Subdivision (a) does not apply to a pole, pole line, distribution or transmission tower, or tower line or substation of a public utility.

(c) Section 21658 is applicable to subdivision (b).

Division 9, Part 1, Chapter 4
Article 3—Regulation of Airports
(excerpts)

21661.5. City Council or Board of Supervisors and ALUC Approvals

(a) No political subdivision, any of its officers or employees, or any person may submit any application for the construction of a new airport to any local, regional, state, or federal agency unless the plan for such construction is first approved by the board of supervisors of the county, or the city council of the city, in which the airport is to be located and unless the plan is submitted to the appropriate commission exercising powers pursuant to Article 3.5 (commencing with Section 21670) of Chapter 4 of Part 1 of Division 9, and acted upon by such commission in accordance with the provisions of such article.

(b) A county board of supervisors or a city council may, pursuant to Section 65100 of the Government Code, delegate its responsibility under this section for the approval of a plan for construction of new helicopter landing and takeoff areas, to the county or city planning agency.

21664.5. Amended Airport Permits; Airport Expansion Defined

(a) An amended airport permit shall be required for every expansion of an existing airport. An applicant for an amended airport permit shall comply with each requirement of this article pertaining to permits for new airports. The department may by regulation provide for exemptions from the operation of this section pursuant to Section 21661, except that no exemption shall be made limiting the applicability of subdivision (e) of Section 21666, pertaining to environmental considerations, including the requirement for public hearings in connection therewith.

(b) As used in this section, “airport expansion” includes any of the following:

(1) The acquisition of runway protection zones, as defined in Federal Aviation Administration Advisory Circular 150/1500-13 [sic. – should be 150/5300-13], or of any interest in land for the purpose of any other expansion as set forth in this section.

(2) The construction of a new runway.

(3) The extension or realignment of an existing runway.

(4) Any other expansion of the airport’s physical facilities for the purpose of accomplishing or which are related to the purpose of paragraph (1), (2), or (3).

(c) This section does not apply to any expansion of an existing airport if the expansion commenced on or prior to the effective date of this section and the expansion met the approval, on or prior to that effective date, of each governmental agency that required the approval by law.

Chapter 3—Local Planning
Article 5—Authority for and Scope of General Plans
(excerpts)

65302.3. General and Applicable Specific Plans; Consistency with Airport Land Use Plans; Amendment; Nonconcurrence Findings

(a) The general plan, and any applicable specific plan prepared pursuant to Article 8 (commencing with Section 65450), shall be consistent with the plan adopted or amended pursuant to Section 21675 of the Public Utilities Code.

(b) The general plan, and any applicable specific plan, shall be amended, as necessary, within 180 days of any amendment to the plan required under Section 21675 of the Public Utilities Code.

(c) If the legislative body does not concur with any of the provisions of the plan required under Section 21675 of the Public Utilities Code, it may satisfy the provisions of this section by adopting findings pursuant to Section 21676 of the Public Utilities Code.

(d) In each county where an airport land use commission does not exist, but where there is a military airport, the general plan, and any applicable specific plan prepared pursuant to Article 8 (commencing with Section 65450), shall be consistent with the safety and noise standards in the Air Installation Compatible Use Zone prepared for that military airport.
PLANNING AND ZONING LAW

GOVERNMENT CODE

Title 7, Division 1
Chapter 4.5—Review and Approval of Development Projects
Article 3—Application for Development Projects
(excerpts)

Note: The following government code sections are referenced in Section 21675.2(c) of the ALUC statutes.

65943. Completeness of Application; Determination; Time; Specification of Parts not Complete and Manner of Completion

(a) Not later than 30 calendar days after any public agency has received an application for a development project, the agency shall determine in writing whether the application is complete and shall immediately transmit the determination to the applicant for the development project. If the written determination is not made within 30 days after receipt of the application, and the application includes a statement that it is an application for a development permit, the application shall be deemed complete for purposes of this chapter. Upon receipt of any resubmittal of the application, a new 30-day period shall begin, during which the public agency shall determine the completeness of the application. If the application is determined not to be complete, the agency’s determination shall specify those parts of the application which are incomplete and shall indicate the manner in which they can be made complete, including a list and thorough description of the specific information needed to complete the application. The applicant shall submit materials to the public agency in response to the list and description.

(b) Not later than 30 calendar days after receipt of the submitted materials, the public agency shall determine in writing whether they are complete and shall immediately transmit that determination to the applicant. If the written determination is not made within that 30-day period, the application together with the submitted materials shall be deemed complete for the purposes of this chapter.

(c) If the application together with the submitted materials are determined not to be complete pursuant to subdivision (b), the public agency shall provide a process for the applicant to appeal that decision in writing to the governing body of the agency or, if there is no governing body, to the director of the agency, as provided by that agency. A city or county shall provide that the right of appeal is to the governing body or, at their option, the planning commission, or both. There shall be a final written determination by the agency of the appeal not later than 60 calendar days after receipt of the applicant’s written appeal. The fact that an appeal is permitted to both the planning commission and to the governing body does not extend the 60-day period. Notwithstanding a decision pursuant to subdivision (b) that the application and submitted materials are not complete, if the final written determination on the appeal is not made within that 60-day period, the application with the submitted materials shall be deemed complete for the purposes of this chapter.

(d) Nothing in this section precludes an applicant and a public agency from mutually agreeing to an extension of any time limit provided by this section.
(e) A public agency may charge applicants a fee not to exceed the amount reasonably necessary to provide the service required by this section. If a fee is charged pursuant to this section, the fee shall be collected as part of the application fee charged for the development permit.

65943.5.

(a) Notwithstanding any other provision of this chapter, any appeal pursuant to subdivision (c) of Section 65943 involving a permit application to a board, office, or department within the California Environmental Protection Agency shall be made to the Secretary for Environmental Protection.

(b) Notwithstanding any other provision of this chapter, any appeal pursuant to subdivision (c) of Section 65943 involving an application for the issuance of an environmental permit from an environmental agency shall be made to the Secretary for Environmental Protection under either of the following circumstances:

(1) The environmental agency has not adopted an appeals process pursuant to subdivision (c) of Section 65943.

(2) The environmental agency declines to accept an appeal for a decision pursuant to subdivision (c) of Section 65943.

(c) For purposes of subdivision (b), “environmental permit” has the same meaning as defined in Section 72012 of the Public Resources Code, and “environmental agency” has the same meaning as defined in Section 71011 of the Public Resources Code, except that “environmental agency” does not include the agencies described in subdivisions (c) and (h) of Section 71011 of the Public Resources Code.

65944. Acceptance of Application as Complete; Requests for Additional Information; Restrictions; Clarification, Amplification, Correction, etc; Prior to Notice of Necessary Information

(a) After a public agency accepts an application as complete, the agency shall not subsequently request of an applicant any new or additional information which was not specified in the list prepared pursuant to Section 65940. The agency may, in the course of processing the application, request the applicant to clarify, amplify, correct, or otherwise supplement the information required for the application.

(b) The provisions of subdivision (a) shall not be construed as requiring an applicant to submit with his or her initial application the entirety of the information which a public agency may require in order to take final action on the application. Prior to accepting an application, each public agency shall inform the applicant of any information included in the list prepared pursuant to Section 65940 which will subsequently be required from the applicant in order to complete final action on the application.

(c) This section shall not be construed as limiting the ability of a public agency to request and obtain information which may be needed in order to comply with the provisions of Division 13 (commencing with Section 21000) of the Public Resources Code.

(d) (1) After a public agency accepts an application as complete, and if the project applicant has identified that the proposed project is located within 1,000 feet of a military installation or within special use airspace or beneath a low-level flight path in accordance with Section 65940, the public agency shall provide a copy of the complete application to any branch of the United States Armed Forces that has provided the Office of Planning and Research with a
single California mailing address within the state for the delivery of a copy of these applications. This subdivision shall apply only to development applications submitted to a public agency 30 days after the Office of Planning and Research has notified cities, counties, and cities and counties of the availability of Department of Defense information on the Internet pursuant to subdivision (d) of Section 65940.

(2) Except for a project within 1,000 feet of a military installation, the public agency is not required to provide a copy of the application if the project is located entirely in an “urbanized area.” An urbanized area is any urban location that meets the definition used by the United State Department of Commerce’s Bureau of Census for “urban” and includes locations with core census block groups containing at least 1,000 people per square mile and surrounding census block groups containing at least 500 people per square mile.

(c) Upon receipt of a copy of the application as required in subdivision (d), any branch of the United States Armed Forces may request consultation with the public agency and the project applicant to discuss the effects of the proposed project on military installations, low-level flight paths, or special use airspace, and potential alternatives and mitigation measures.

(f) (1) Subdivisions (d), (e), and (f) as these relate to low-level flight paths, special use airspace, and urbanized areas shall not be operative until the United States Department of Defense provides electronic maps of low-level flight paths, special use airspace, and military installations, at a scale and in an electronic format that is acceptable to the Office of Planning and Research.

(2) Within 30 days of a determination by the Office of Planning and Research that the information provided by the Department of Defense is sufficient and in an acceptable scale and format, the office shall notify cities, counties, and cities and counties of the availability of the information on the Internet. Cities, counties, and cities and counties shall comply with subdivision (d) within 30 days of receiving this notice from the office.

65945. Notice of Proposal to Adopt or Amend Certain Plans or Ordinances by City or County, Fee; Subscription to Periodically Updated Notice as Alternative, Fee

(a) At the time of filing an application for a development permit with a city or county, the city or county shall inform the applicant that he or she may make a written request to retrieve notice from the city or county of a proposal to adopt or amend any of the following plans or ordinances:

1. A general plan.
2. A specific plan.
3. A zoning ordinance.
4. An ordinance affecting building permits or grading permits.

The applicant shall specify, in the written request, the types of proposed action for which notice is requested. Prior to taking any of those actions, the city or county shall give notice to any applicant who has requested notice of the type of action proposed and whose development project is pending before the city or county if the city or county determines that the proposal is reasonably related to the applicant’s request for the development permit. Notice shall be given only for those types of actions which the applicant specifies in the request for notification.

The city or county may charge the applicant for a development permit, to whom notice is provided pursuant to this subdivision, a reasonable fee not to exceed the actual cost of providing that notice.
If a fee is charged pursuant to this subdivision, the fee shall be collected as part of the application fee charged for the development permit.

(b) As an alternative to the notification procedure prescribed by subdivision (a), a city or county may inform the applicant at the time of filing an application for a development permit that he or she may subscribe to a periodically updated notice or set of notices from the city or county which lists pending proposals to adopt or amend any of the plans or ordinances specified in subdivision (a), together with the status of the proposal and the date of any hearings thereon which have been set.

Only those proposals which are general, as opposed to parcel-specific in nature, and which the city or county determines are reasonably related to requests for development permits, need be listed in the notice. No proposals shall be required to be listed until such time as the first public hearing thereon has been set. The notice shall be updated and mailed at least once every six weeks; except that a notice need not be updated and mailed until a change in its contents is required.

The city or county may charge the applicant for a development permit, to whom notice is provided pursuant to this subdivision, a reasonable fee not to exceed the actual cost of providing that notice, including the costs of updating the notice, for the length of time the applicant requests to be sent the notice or notices.

65945.3. Notice of Proposal to Adopt or Amend Rules or Regulations Affecting Issuance of Permits by Local Agency other than City or County; Fee

At the time of filing an application for a development permit with a local agency, other than a city or county, the local agency shall inform the applicant that he or she may make a written request to receive notice of any proposal to adopt or amend a rule or regulation affecting the issuance of development permits.

Prior to adopting or amending any such rule or regulation, the local agency shall give notice to any applicant who has requested such notice and whose development project is pending before the agency if the local agency determines that the proposal is reasonably related to the applicant’s request for the development permit.

The local agency may charge the applicant for a development permit, to whom notice is provided pursuant to this section, a reasonable fee not to exceed the actual cost of providing that notice. If a fee is charged pursuant to this section, the fee shall be collected as part of the application fee charged for the development permit.

65945.5. Notice of Proposal to Adopt or Amend Regulation Affecting Issuance of Permits and Which Implements Statutory Provision by State Agency

At the time of filing an application for a development permit with a state agency, the state agency shall inform the applicant that he or she may make a written request to receive notice of any proposal to adopt or amend a regulation affecting the issuance of development permits and which implements a statutory provision.

Prior to adopting or amending any such regulation, the state agency shall give notice to any applicant who has requested such notice and whose development project is pending before the state agency if the state agency determines that the proposal is reasonably related to the applicant’s request for the development permit.
65945.7. Actions, Inactions, or Recommendations Regarding Ordinances, Rules or Regulations; Invalidity or Setting Aside Ground of Error Only if Prejudicial

No action, inaction, or recommendation regarding any ordinance, rule, or regulation subject to this Section 65945, 65945.3, or 65945.5 by any legislative body, administrative body, or the officials of any state or local agency shall be held void or invalid or be set aside by any court on the ground of any error, irregularity, informality, neglect or omission (hereinafter called “error”) as to any matter pertaining to notices, records, determinations, publications, or any matters of procedure whatever, unless after an examination of the entire case, including evidence, the court shall be of the opinion that the error complained of was prejudicial, and that by reason of such error the party complaining or appealing sustained and suffered substantial injury, and that a different result would have been probable if such error had not occurred or existed. There shall be no presumption that error is prejudicial or that injury was done if error is shown.

65946. [Replaced by AB2351 Statutes of 1993]
66030.

(a) The Legislature finds and declares all of the following:

(1) Current law provides that aggrieved agencies, project proponents, and affected residents may bring suit against the land use decisions of state and local governmental agencies. In practical terms, nearly anyone can sue once a project has been approved.

(2) Contention often arises over projects involving local general plans and zoning, redevelopment plans, the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code), development impact fees, annexations and incorporations, and the Permit Streamlining Act (Chapter 4.5 (commencing with Section 65920)).

(3) When a public agency approves a development project that is not in accordance with the law, or when the prerogative to bring suit is abused, lawsuits can delay development, add uncertainty and cost to the development process, make housing more expensive, and damage California’s competitiveness. This litigation begins in the superior court, and often progresses on appeal to the Court of Appeal and the Supreme Court, adding to the workload of the state’s already overburdened judicial system.

(b) It is, therefore, the intent of the Legislature to help litigants resolve their differences by establishing formal mediation processes for land use disputes. In establishing these mediation processes, it is not the intent of the Legislature to interfere with the ability of litigants to pursue remedies through the courts.

66031.

(a) Notwithstanding any other provision of law, any action brought in the superior court relating to any of the following subjects may be subject to a mediation proceeding conducted pursuant to this chapter:

(1) The approval or denial by a public agency of any development project.

(2) Any act or decision of a public agency made pursuant to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(3) The failure of a public agency to meet the time limits specified in Chapter 4.5 (commencing with Section 65920), commonly known as the Permit Streamlining Act, or in the Subdivision Map Act (Division 2 (commencing with Section 66410)).

(4) Fees determined pursuant to Sections 53080 to 53082, inclusive, or Chapter 4.9 (commencing with Section 65995).

(5) Fees determined pursuant to Chapter 5 (commencing with Section 66000).
(6) The adequacy of a general plan or specific plan adopted pursuant to Chapter 3 (commencing with Section 65100).

(7) The validity of any sphere of influence, urban service area, change of organization or reorganization, or any other decision made pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000 (Division 3 (commencing with Section 56000) of Title 5).

(8) The adoption or amendment of a redevelopment plan pursuant to the Community Redevelopment Law (Part 1 (commencing with Section 33000) of Division 24 of the Health and Safety Code).

(9) The validity of any zoning decision made pursuant to Chapter 4 (commencing with Section 65800).

(10) The validity of any decision made pursuant to Article 3.5 (commencing with Section 21670) of Chapter 4 of Part 1 of Division 9 of the Public Utilities Code.

(b) Within five days after the deadline for the respondent or defendant to file its reply to an action, the court may invite the parties to consider resolving their dispute by selecting a mutually acceptable person to serve as a mediator, or an organization or agency to provide a mediator.

(c) In selecting a person to serve as a mediator, or an organization or agency to provide a mediator, the parties shall consider the following:

(1) The council of governments having jurisdiction in the county where the dispute arose.

(2) Any subregional or countywide council of governments in the county where the dispute arose.

(3) Any other person with experience or training in mediation including those with experience in land use issues, or any other organization or agency which can provide a person with experience in mediation, including those with experience in land use issues.

(d) If the court invites the parties to consider mediation, the parties shall notify the court within 30 days if they have selected a mutually acceptable person to serve as a mediator. If the parties have not selected a mediator within 30 days, the action shall proceed. The court shall not draw any implication, favorable or otherwise, from the refusal by a party to accept the invitation by the court to consider mediation. Nothing in this section shall preclude the parties from using mediation at any other time while the action is pending.
PLANNING AND ZONING LAW
GOVERNMENT CODE
Title 7—Planning and Land Use
Division 2—Subdivisions
Chapter 3—Procedure
Article 3—Review of Tentative Map by Other Agencies
(excerpts)

66455.9.
Whenever there is consideration of an area within a development for a public school site, the advisory agency shall give the affected districts and the State Department of Education written notice of the proposed site. The written notice shall include the identification of any existing or proposed runways within the distance specified in Section 17215 of the Education Code. If the site is within the distance of an existing or proposed airport runway as described in Section 17215 of the Education Code, the department shall notify the State Department of Transportation as required by the section and the site shall be investigated by the State Department of Transportation required by Section 17215.
17215.

(a) In order to promote the safety of pupils, comprehensive community planning, and greater educational usefulness of school sites, before acquiring title to or leasing property for a new school site, the governing board of each school district, including any district governed by a city board of education or a charter school, shall give the State Department of Education written notice of the proposed acquisition or lease and shall submit any information required by the State Department of Education if the site is within two miles, measured by air line, of that point on an airport runway or a potential runway included in an airport master plan that is nearest to the site.

(b) Upon receipt of the notice required pursuant to subdivision (a), the State Department of Education shall notify the Department of Transportation in writing of the proposed acquisition or lease. If the Department of Transportation is no longer in operation, the State Department of Education shall, in lieu of notifying the Department of Transportation, notify the United States Department of Transportation or any other appropriate agency, in writing, of the proposed acquisition for the purpose of obtaining from the department or other agency any information or assistance that it may desire to give.

(c) The Department of Transportation shall investigate the proposed site and, within 30 working days after receipt of the notice, shall submit to the State Department of Education a written report of its findings including recommendations concerning acquisition or lease of the site. As part of the investigation, the Department of Transportation shall give notice thereof to the owner and operator of the airport who shall be granted the opportunity to comment upon the site. The Department of Transportation shall adopt regulations setting forth the criteria by which a site will be evaluated pursuant to this section.

(d) The State Department of Education shall, within 10 days of receiving the Department of Transportation’s report, forward the report to the governing board of the school district or charter school. The governing board or charter school may not acquire title to or lease the property until the report of the Department of Transportation has been received. If the report does not favor the acquisition or lease of the property for a school site or an addition to a present school site, the governing board or charter school may not acquire title to or lease the property. If the report does favor the acquisition or lease of the property for a school site or an addition to a present school site, the governing board or charter school shall hold a public hearing on the matter prior to acquiring or leasing the site.

(e) If the Department of Transportation’s recommendation does not favor acquisition or lease of the proposed site, state funds or local funds may not be apportioned or expended for the acquisition of that site, construction of any school building on that site, or for the expansion of any existing site to include that site.

(f) This section does not apply to sites acquired prior to January 1, 1966, nor to any additions or extensions to those sites.
81033. Investigation: Geologic and Soil Engineering Studies; Airport in Proximity

(c) To promote the safety of students, comprehensive community planning, and greater educational usefulness of community college sites, the governing board of each community college district, if the proposed site is within two miles, measured by air line, of that point on an airport runway, or a runway proposed by an airport master plan, which is nearest the site and excluding them if the property is not so located, before acquiring title to property for a new community college site or for an addition to a present site, shall give the board of governors notice in writing of the proposed acquisition and shall submit any information required by the board of governors.

Immediately after receiving notice of the proposed acquisition of property which is within two miles, measured by air line, of that point on an airport runway, or a runway proposed by an airport master plan, which is nearest the site, the board of governors shall notify the Division of Aeronautics of the Department of Transportation, in writing, of the proposed acquisition. The Division of Aeronautics shall make an investigation and report to the board of governors within 30 working days after receipt of the notice. If the Division of Aeronautics is no longer in operation, the board of governors shall, in lieu of notifying the Division of Aeronautics, notify the Federal Aviation Administration or any other appropriate agency, in writing, of the proposed acquisition for the purpose of obtaining from the authority or other agency such information or assistance as it may desire to give.

The board of governors shall investigate the proposed site and within 35 working days after receipt of the notice shall submit to the governing board a written report and its recommendations concerning acquisition of the site. The governing board shall not acquire title to the property until the report of the board of governors has been received. If the report does not favor the acquisition of the property for a community college site or an addition to a present community college site, the governing board shall not acquire title to the property until 30 days after the department’s report is received and until the board of governors’ report has been read at a public hearing duly called after 10 days’ notice published once in a newspaper of general circulation within the community college district, or if there is no such newspaper, then in a newspaper of general circulation within the county in which the property is located.

(d) If, with respect to a proposed site located within two miles of an operative airport runway, the report of the board of governors submitted to a community college district governing board under subdivision (c) does not favor the acquisition of the site on the sole or partial basis of the unfavorable recommendation of the Division of Aeronautics of the Department of Transportation, no state agency or officer shall grant, apportion, or allow to such community college district for expenditure in connection with that site, any state funds otherwise made available under any state law whatever for a community college site acquisition or college building
construction, or for expansion of existing sites and buildings, and no funds of the community college district or of the county in which the district lies shall be expended for such purposes; provided that provisions of this section shall not be applicable to sites acquired prior to January 1, 1966, nor any additions or extensions to such sites.

If the recommendations of the Division of Aeronautics are unfavorable, such recommendations shall not be overruled without the express approval of the board of governors and the State Allocation Board.
21096.  Airport Planning

(a) If a lead agency prepares an environmental impact report for a project situated within airport land use compatibility plan boundaries, or, if an airport land use compatibility plan has not been adopted, for a project within two nautical miles of a public airport or public use airport, the Airport Land Use Planning Handbook published by the Division of Aeronautics of the Department of Transportation, in compliance with Section 21674.5 of the Public Utilities Code and other documents, shall be utilized as technical resources to assist in the preparation of the environmental impact report as the report relates to airport-related safety hazards and noise problems.

(b) A lead agency shall not adopt a negative declaration for a project described in subdivision (a) unless the lead agency considers whether the project will result in a safety hazard or noise problem for persons using the airport or for persons residing or working in the project area.
BUSINESS AND PROFESSIONS CODE
Division 4—Real Estate
Part 2—Regulation of Transactions
Chapter 1—Subdivided Lands
Article 2—Investigation, Regulation and Report
(excerpts)

11010.
(a) Except as otherwise provided pursuant to subdivision (c) or elsewhere in this chapter, any person who intends to offer subdivided lands within this state for sale or lease shall file with the Department of Real Estate an application for a public report consisting of a notice of intention and a completed questionnaire on a form prepared by the department.

(b) The notice of intention shall contain the following information about the subdivided lands and the proposed offering:

[Sub-Sections (1) through (12) omitted]

(13) (A) The location of all existing airports, and of all proposed airports shown on the general plan of any city or county, located within two statute miles of the subdivision. If the property is located within an airport influence area, the following statement shall be included in the notice of intention:

NOTICE OF AIRPORT IN VICINITY

This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

(B) For purposes of this section, an “airport influence area,” also known as an “airport referral area,” is the area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses as determined by an airport land use commission.

Division 2—Property
Part 4—Acquisition of Property
Title 4—Transfer
Chapter 2—Transfer of Real Property
Article 1.7—Disclosure of Natural Hazards Upon Transfer of Residential Property
(excerpts)

1103.

(a) Except as provided in Section 1103.1, this article applies to any transfer by sale, exchange, installment land sale contract, as defined in Section 2985, lease with an option to purchase, any other option to purchase, or ground lease coupled with improvements, of any real property described in subdivision (c), or residential stock cooperative, improved with or consisting of not less than one nor more than four dwelling units.

(b) Except as provided in Section 1103.1, this article shall apply to a resale transaction entered into on or after January 1, 2000, for a manufactured home, as defined in Section 18007 of the Health and Safety Code, that is classified as personal property intended for use as a residence, or a mobilehome, as defined in Section 18008 of the Health and Safety Code, that is classified as personal property intended for use as a residence, if the real property on which the manufactured home or mobilehome is located is real property described in subdivision (c).

(c) This article shall apply to the transactions described in subdivisions (a) and (b) only if the transferor or his or her agent are required by one or more of the following to disclose the property’s location within a hazard zone:

(1) A person who is acting as an agent for a transferor of real property that is located within a special flood hazard area (any type Zone “A” or “V”) designated by the Federal Emergency Management Agency, or the transferor if he or she is acting without an agent, shall disclose to any prospective transferee the fact that the property is located within a special flood hazard area if either:

(A) The transferor, or the transferor’s agent, has actual knowledge that the property is within a special flood hazard area.

(B) The local jurisdiction has compiled a list, by parcel, of properties that are within the special flood hazard area and a notice has been posted at the offices of the county recorder, county assessor, and county planning agency that identifies the location of the parcel list.

(2) … is located within an area of potential flooding … shall disclose to any prospective transferee the fact that the property is located within an area of potential flooding …

(3) … is located within a very high fire hazard severity zone, designated pursuant to Section 51178 of the Public Resources Code … shall disclose to any prospective transferee the fact that the property is located within a very high fire hazard severity zone and is subject to the requirements of Section 51182 …
(4) ... is located within an earthquake fault zone, designated pursuant to Section 2622 of the Public Resources Code ... shall disclose to any prospective transferee the fact that the property is located within a delineated earthquake fault zone ... 

(5) ... is located within a seismic hazard zone, designated pursuant to Section 2696 of the Public Resources Code ... shall disclose to any prospective transferee the fact that the property is located within a seismic hazard zone ... 

(6) ... is located within a state responsibility area determined by the board, pursuant to Section 4125 of the Public Resources Code, shall disclose to any prospective transferee the fact that the property is located within a wildland area that may contain substantial forest fire risks and hazards and is subject to the requirements of Section 4291 ... 

(d) Any waiver of the requirements of this article is void as against public policy.

1103.1. 

(a) This article does not apply to the following transfers: 

(1) Transfers pursuant to court order, including, but not limited to, transfers ordered by a probate court in administration of an estate, transfers pursuant to a writ of execution, transfers by any foreclosure sale, transfers by a trustee in bankruptcy, transfers by eminent domain, and transfers resulting from a decree for specific performance. 

(2) Transfers to a mortgagee by a mortgagor or successor in interest who is in default, transfers to a beneficiary of a deed of trust by a trustor or successor in interest who is in default, transfers by any foreclosure sale after default, transfers by any foreclosure sale after default in an obligation secured by a mortgage, transfers by a sale under a power of sale or any foreclosure sale under a decree of foreclosure after default in an obligation secured by a deed of trust or secured by any other instrument containing a power of sale, or transfers by a mortgagee or a beneficiary under a deed of trust who has acquired the real property at a sale conducted pursuant to a power of sale under a mortgage or deed of trust or a sale pursuant to a decree of foreclosure or has acquired the real property by a deed in lieu of foreclosure. 

(3) Transfers by a fiduciary in the course of the administration of a decedent’s estate, guardianship, conservatorship, or trust. 

(4) Transfers from one coowner to one or more other coowners. 

(5) Transfers made to a spouse, or to a person or persons in the lineal line of consanguinity of one or more of the transferors. 

(6) Transfers between spouses resulting from a judgment of dissolution of marriage or of legal separation of the parties or from a property settlement agreement incidental to that judgment. 

(7) Transfers by the Controller in the course of administering Chapter 7 (commencing with Section 1500) of Title 10 of Part 3 of the Code of Civil Procedure. 

(8) Transfers under Chapter 7 (commencing with Section 3691) or Chapter 8 (commencing with Section 3771) of Part 6 of Division 1 of the Revenue and Taxation Code. 

(9) Transfers or exchanges to or from any governmental entity. 

(b) Transfers not subject to this article may be subject to other disclosure requirements, including those under Sections 8589.3, 8589.4, and 51183.5 of the Government Code and Sections 2621.9,
2694, and 4136 of the Public Resources Code. In transfers not subject to this article, agents may make required disclosures in a separate writing.

1103.2.

(a) The disclosures required by this article are set forth in, and shall be made on a copy of, the following Natural Hazard Disclosure Statement: [content omitted].

(b) If an earthquake fault zone, seismic hazard zone, very high fire hazard severity zone, or wildland fire area map or accompanying information is not of sufficient accuracy or scale that a reasonable person can determine if the subject real property is included in a natural hazard area, the transferor or transferor’s agent shall mark “Yes” on the Natural Hazard Disclosure Statement. The transferor or transferor’s agent may mark “No” on the Natural Hazard Disclosure Statement if he or she attaches a report prepared pursuant to subdivision (c) of Section 1103.4 that verifies the property is not in the hazard zone. Nothing in this subdivision is intended to limit or abridge any existing duty of the transferor or the transferor’s agents to exercise reasonable care in making a determination under this subdivision.

[Sub-Sections (c) through (h) omitted]

[Section 1103.3 omitted]

1103.4.

(a) Neither the transferor nor any listing or selling agent shall be liable for any error, inaccuracy, or omission of any information delivered pursuant to this article if the error, inaccuracy, or omission was not within the personal knowledge of the transferor or the listing or selling agent, and was based on information timely provided by public agencies or by other persons providing information as specified in subdivision (c) that is required to be disclosed pursuant to this article, and ordinary care was exercised in obtaining and transmitting the information.

(b) The delivery of any information required to be disclosed by this article to a prospective transferee by a public agency or other person providing information required to be disclosed pursuant to this article shall be deemed to comply with the requirements of this article and shall relieve the transferor or any listing or selling agent of any further duty under this article with respect to that item of information.

(c) The delivery of a report or opinion prepared by a licensed engineer, land surveyor, geologist, or expert in natural hazard discovery dealing with matters within the scope of the professional’s license or expertise, shall be sufficient compliance for application of the exemption provided by subdivision (a) if the information is provided to the prospective transferee pursuant to a request therefor, whether written or oral. In responding to that request, an expert may indicate, in writing, an understanding that the information provided will be used in fulfilling the requirements of Section 1103.2 and, if so, shall indicate the required disclosures, or parts thereof, to which the information being furnished is applicable. Where that statement is furnished, the expert shall not be responsible for any items of information, or parts thereof, other than those expressly set forth in the statement.

(1) In responding to the request, the expert shall determine whether the property is within an airport influence area as defined in subdivision (b) of Section 11010 of the Business and Professions Code. If the property is within an airport influence area, the report shall contain the following statement:
NOTICE OF AIRPORT IN VICINITY

This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

[Remainder of Article 1.7 omitted]
CIVIL CODE
Division 2, Part 4
Title 6—Common Interest Developments
Chapter 2—County Documents
Article 1—Creation
(excerpts)

1353.

(a) (1) A declaration, recorded on or after January 1, 1986, shall contain a legal description of the common interest development, and a statement that the common interest development is a community apartment project, condominium project, planned development, stock cooperative, or combination thereof. The declaration shall additionally set forth the name of the association and the restrictions on the use or enjoyment of any portion of the common interest development that are intended to be enforceable equitable servitudes. If the property is located within an airport influence area, a declaration, recorded after January 1, 2004, shall contain the following statement:

NOTICE OF AIRPORT IN VICINITY
This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.

(2) For purposes of this section, an “airport influence area,” also known as an “airport referral area,” is the area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses as determined by an airport land use commission.

(3) [Omitted]

(4) The statement in a declaration acknowledging that a property is located in an airport influence area does not constitute a title defect, lien, or encumbrance.

(b) The declaration may contain any other matters the original signator of the declaration or the owners consider appropriate.
**LEGISLATIVE HISTORY SUMMARY**

PUBLIC UTILITIES CODE
Sections 21670 et seq.

Airport Land Use Commission Statutes
And Related Statutes

1967   Original ALUC statute enacted.
   › Establishment of ALUCs required in each county containing a public airport served by a certificated air carrier.
   › The purpose of ALUCs is indicated as being to make recommendations regarding height restrictions on buildings and the use of land surrounding airports.

1970   Assembly Bill 1856 (Badham) Chapter 1182, Statutes of 1970—Adds provisions which:
   › Require ALUCs to prepare comprehensive land use plans.
   › Require such plans to include a long-range plan and to reflect the airport’s forecast growth during the next 20 years.
   › Require ALUC review of airport construction plans (Section 21661.5).
   › Exempt Los Angeles County from the requirement of establishing an ALUC.

1971   The function of ALUCs is restated as being to require new construction to conform to Department of Aeronautics standards.

1973   ALUCs are permitted to establish compatibility plans for military airports.

1982   Assembly Bill 2920 (Rogers) Chapter 1041, Statutes of 1982—Adds major changes which:
   › More clearly articulate the purpose of ALUCs.
   › Eliminate reference to “achieve by zoning.”
   › Require consistency between local general and specific plans and airport land use commission plans; the requirements define the process for attaining consistency, they do not establish standards for consistency.
   › Eliminate the requirement for proposed individual development projects to be referred to an ALUC for review once local general/specific plans are consistent with the ALUC’s plan.
   › Require that local agencies make findings of fact before overriding an ALUC decision.
   › Change the vote required for an override from 4/5 to 2/3.

1984   Assembly Bill 3551 (Mountjoy) Chapter 1117, Statutes of 1984—Amends the law to:
   › Require ALUCs in all counties having an airport which serves the general public unless a county and its cities determine an ALUC is not needed.
   › Limit amendments to compatibility plans to once per year.
   › Allow individual projects to continue to be referred to the ALUC by agreement.
   › Extend immunity to airports if an ALUC action is overridden by a local agency not owning the airport.
Provide state funding eligibility for preparation of compatibility plans through the Regional Transportation Improvement Program process.

1987 Senate Bill 633 (Rogers) Chapter 1018, Statutes of 1987—Makes revisions which:

- Require that a designated body serving as an ALUC include two members having “expertise in aviation.”
- Allows an interested party to initiate court proceedings to postpone the effective date of a local land use action if a compatibility plan has not been adopted.
- Delete sunset provisions contained in certain clauses of the law. Allows reimbursement for ALUC costs in accordance with the Commission on State Mandates.

1989 Senate Bill 255 (Bergeson) Chapter 54, Statutes of 1989—

- Sets a requirement that comprehensive land use plans be completed by June 1991.
- Establishes a method for compelling ALUCs to act on matters submitted for review.
- Allows ALUCs to charge fees for review of projects.
- Suspends any lawsuits that would stop development until the ALUC adopts its plan or until June 1, 1991.

1989 Senate Bill 235 (Alquist) Chapter 788, Statutes of 1989—Appropriates $3,672,000 for the payment of claims to counties seeking reimbursement of costs incurred during fiscal years 1985-86 through 1989-90 pursuant to state-mandated requirement (Chapter 1117, Statutes of 1984) for creation of ALUCs in most counties. This statute was repealed in 1993.

1990 Assembly Bill 4164 (Mountjoy) Chapter 1008, Statutes of 1990—Adds section 21674.5 requiring the Division of Aeronautics to develop and implement a training program for ALUC staffs.

1990 Assembly Bill 4265 (Clute) Chapter 563, Statutes of 1990—With the concurrence of the Division of Aeronautics, allows ALUCs to use an airport layout plan, rather than a long-range airport master plan, as the basis for preparation of a compatibility plan.

1990 Senate Bill 1288 (Beverly) Chapter 54, Statutes of 1990—Amends Section 21670.2 to give Los Angeles County additional time to prepare compatibility plans and meet other provisions of the ALUC statutes.

1991 Senate Bill 532 (Bergeson) Chapter 140, Statutes of 1991—

- Allows counties having half of their compatibility plans completed or under preparation by June 30, 1991, an additional year to complete the remainder.
- Allows ALUCs to continue to charge fees under these circumstances.
- Fees may be charged only until June 30, 1992, if plans are not completed by then.

1993 Senate Bill 443 (Committee on Budget and Fiscal Review) Chapter 59, Statutes of 1993—Amends Section 21670(b) to make the formation of ALUCs permissive rather than mandatory as of June 30, 1993. (Note: Section 21670.2 which assigns responsibility for coordinating the airport planning of public agencies in Los Angeles County is not affected by this amendment.)

1994 Assembly Bill 2831 (Mountjoy) Chapter 644, Statutes of 1994—Reinstates the language in Section 21670(b) mandating establishment of ALUCs, but also provides for an alternative airport land use planning process. Lists specific actions which a county and affected cities must take in order for such alternative process to receive Caltrans approval. Requires that
ALUCs be guided by information in the Caltrans *Airport Land Use Planning Handbook* when formulating airport land use plans.

1994 Senate Bill 1453 (Rogers) Chapter 438, Statutes of 1994—Amends California Environmental Quality Act (CEQA) statutes as applied to preparation of environmental documents affecting projects in the vicinity of airports. Requires lead agencies to use the *Airport Land Use Planning Handbook* as a technical resource when assessing the airport-related noise and safety impacts of such projects.

1997 Assembly Bill 1130 (Oller) Chapter 81, Statutes of 1997—Added Section 21670.4 concerning airports whose planning boundary straddles a county line.

2000 Senate Bill 1350 (Rainey) Chapter 506, Statutes of 2000—Added Section 21670(f) clarifying that special districts are among the local agencies to which airport land use planning laws are intended to apply.

2001 Assembly Bill 93 (Wayne) Chapter 946, Statutes of 2001—Added Section 21670.3 regarding San Diego County Regional Airport Authority’s responsibility for airport planning within San Diego County.

2002 Assembly Bill 3026 (Committee on Transportation) Chapter 438, Statutes of 2002—Changes the term “comprehensive land use plan” to “airport land use compatibility plan.”

2002 Assembly Bill 2776 (Simitian) Chapter 496, Statutes of 2002—Requires information regarding the location of a property within an airport influence area be disclosed as part of certain real estate transactions effective January 1, 2004.

2002 Senate Bill 1468 (Knight) Chapter 971, Statutes of 2002—Changes ALUC preparation of airport land use compatibility plans for military airports from optional to required. Requires that the plans be consistent with the safety and noise standards in the Air Installation Compatible Use Zone for that airport. Requires that the general plan and any specific plans be consistent with these standards where there is a military airport, but an airport land use commission does not exist.

2003 Assembly Bill 332 (Mullin) Chapter 351, Statutes of 2003—Clarifies that school districts and community college districts are subject to compatibility plans. Requires local public agencies to notify ALUC and Division of Aeronautics at least 45 days prior to deciding to overrule the ALUC.

Adds that prior to granting building construction permits, local agencies shall be guided by the criteria established in the *Airport Land Use Planning Handbook* and any related federal aviation regulations to the extent that the criteria has been incorporated into their airport land use compatibility plan.

2004 Senate Bill 1223 (Committee on Transportation) Chapter 615, Statutes of 2004—Technical revisions eliminating most remaining references to the term “comprehensive land use plan” and replacing it with “airport land use compatibility plan.” Also replaces the terms “planning area” and “study area” with “airport influence area.”

2005 Assembly Bill 1358 (Mullin) Chapter 29, Statutes of 2005—Requires a school district to notify the Department of Transportation before leasing property for a new school site. Also makes these provisions applicable to charter schools.
2007  Senate Bill 10 (Kehoe) Chapter 287, Statutes of 2007—The San Diego County Regional Airport Authority Reform Act of 2007. Restructures the airport authority established in 2001 by AB 93 (Wayne), with a set of goals related to governance, accountability, planning and operations at San Diego International Airport.
Subpart A
GENERAL

77.1 Purpose.

This part establishes:

(a) The requirements to provide notice to the FAA of certain proposed construction, or the alteration of existing structures;

(b) The standards used to determine obstructions to air navigation, and navigational and communication facilities;

(c) The process for aeronautical studies of obstructions to air navigation or navigational facilities to determine the effect on the safe and efficient use of navigable airspace, air navigation facilities or equipment; and

(d) The process to petition the FAA for discretionary review of determinations, revisions, and extensions of determinations.

77.3 Definitions.

For the purpose of this part:

“Non-precision instrument runway” means a runway having an existing instrument approach procedure utilizing air navigation facilities with only horizontal guidance, or area type navigation equipment, for which a straight-in non-precision instrument approach procedure has been approved, or planned, and for which no precision approach facilities are planned, or indicated on an FAA planning document or military service military airport planning document.

Planned or proposed airport is an airport that is the subject of at least one of the following documents received by the FAA:

(2) Airport Improvement Program requests for aid.

(3) Notices of existing airports where prior notice of the airport construction or alteration was not provided as required by 14 CFR Part 157.

(4) Airport layout plans.

(5) DOD proposals for airports used only by the U.S. Armed Forces.
(6) DOD proposals on joint-use (civil-military) airports.

(7) Completed airport site selection feasibility study.

“Precision instrument runway” means a runway having an existing instrument approach procedure utilizing an Instrument Landing System (ILS), or a Precision Approach Radar (PAR). It also means a runway for which a precision approach system is planned and is so indicated by an FAA-approved airport layout plan; a military service approved military airport layout plan; any other FAA planning document, or military service military airport planning document.

“Public use airport” is an airport available for use by the general public without a requirement for prior approval of the airport owner or operator.

“Seaplane base” is considered to be an airport only if its sea lanes are outlined by visual markers.

“Utility runway” means a runway that is constructed for and intended to be used by propeller driven aircraft of 12,500 pounds maximum gross weight and less.

“Visual runway” means a runway intended solely for the operation of aircraft using visual approach procedures, with no straight-in instrument approach procedure and no instrument designation indicated on an FAA-approved airport layout plan, a military service approved military airport layout plan, or by any planning document submitted to the FAA by competent authority.

Subpart B

NOTICE REQUIREMENTS

77.5 Applicability.

(a) If you propose any construction or alteration described in §77.9, you must provide adequate notice to the FAA of that construction or alteration.

(b) If requested by the FAA, you must also file supplemental notice before the start date and upon completion of certain construction or alterations that are described in §77.9.

(c) Notice received by the FAA under this subpart is used to:

(1) Evaluate the effect of the proposed construction or alteration on safety in air commerce and the efficient use and preservation of the navigable airspace and of airport traffic capacity at public use airports;

(2) Determine whether the effect of proposed construction or alteration is a hazard to air navigation;

(3) Determine appropriate marking and lighting recommendations, using FAA Advisory Circular 70/7460–1, Obstruction Marking and Lighting;

(4) Determine other appropriate measures to be applied for continued safety of air navigation; and

(5) Notify the aviation community of the construction or alteration of objects that affect the navigable airspace, including the revision of charts, when necessary.
77.7 Form and time of notice.

(a) If you are required to file notice under §77.9, you must submit to the FAA a completed FAA Form 7460–1, Notice of Proposed Construction or Alteration. FAA Form 7460–1 is available at FAA regional offices and on the Internet.

(b) You must submit this form at least 45 days before the start date of the proposed construction or alteration or the date an application for a construction permit is filed, whichever is earliest.

(c) If you propose construction or alteration that is also subject to the licensing requirements of the Federal Communications Commission (FCC), you must submit notice to the FAA on or before the date that the application is filed with the FCC.

(d) If you propose construction or alteration to an existing structure that exceeds 2,000 ft. in height above ground level (AGL), the FAA presumes it to be a hazard to air navigation that results in an inefficient use of airspace. You must include details explaining both why the proposal would not constitute a hazard to air navigation and why it would not cause an inefficient use of airspace.

(e) The 45-day advance notice requirement is waived if immediate construction or alteration is required because of an emergency involving essential public services, public health, or public safety. You may provide notice to the FAA by any available, expeditious means. You must file a completed FAA Form 7460–1 within 5 days of the initial notice to the FAA. Outside normal business hours, the nearest flight service station will accept emergency notices.

77.9 Construction or alteration requiring notice.

If requested by the FAA, or if you propose any of the following types of construction or alteration, you must file notice with the FAA of:

(a) Any construction or alteration that is more than 200 ft. AGL at its site.

(b) Any construction or alteration that exceeds an imaginary surface extending outward and upward at any of the following slopes:

1. 100 to 1 for a horizontal distance of 20,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway more than 3,200 ft. in actual length, excluding heliports.

2. 50 to 1 for a horizontal distance of 10,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway no more than 3,200 ft. in actual length, excluding heliports.

3. 25 to 1 for a horizontal distance of 5,000 ft. from the nearest point of the nearest landing and takeoff area of each heliport described in paragraph (d) of this section.

(c) Any highway, railroad, or other traverse way for mobile objects, of a height which, if adjusted upward 17 feet for an Interstate Highway that is part of the National System of Military and Interstate Highways where overcrossings are designed for a minimum of 17 feet vertical distance, 15 feet for any other public roadway, 10 feet or the height of the highest mobile object that would normally traverse the road, whichever is greater, for a private road, 23 feet for a railroad, and for a waterway or any other traverse way not previously mentioned, an amount equal to the height of the highest mobile object that would normally traverse it, would exceed a standard of paragraph (a) or (b) of this section.

(d) Any construction or alteration on any of the following airports and heliports:

(2) A military airport under construction, or an airport under construction that will be available for public use.

(3) An airport operated by a Federal agency or the DOD.

(4) An airport or heliport with at least one FAA-approved instrument approach procedure.

c) You do not need to file notice for construction or alteration of:

(1) Any object that will be shielded by existing structures of a permanent and substantial nature or by natural terrain or topographic features of equal or greater height, and will be located in the congested area of a city, town, or settlement where the shielded structure will not adversely affect safety in air navigation.

(2) Any air navigation facility, airport visual approach or landing aid, aircraft arresting device, or meteorological device meeting FAA-approved siting criteria or an appropriate military service siting criteria on military airports, the location and height of which are fixed by its functional purpose.

(3) Any construction or alteration for which notice is required by any other FAA regulation.

(4) Any antenna structure of 20 feet or less in height, except one that would increase the height of another antenna structure.

### 77.11 Supplemental notice requirements.

(a) You must file supplemental notice with the FAA when:

(1) The construction or alteration is more than 200 feet in height AGL at its site; or

(2) Requested by the FAA.

(b) You must file supplemental notice on a prescribed FAA form to be received within the time limits specified in the FAA determination. If no time limit has been specified, you must submit supplemental notice of construction to the FAA within 5 days after the structure reaches its greatest height.

(c) If you abandon a construction or alteration proposal that requires supplemental notice, you must submit notice to the FAA within 5 days after the project is abandoned.

(d) If the construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.
Subpart C
STANDARDS FOR DETERMINING OBSTRUCTIONS TO AIR NAVIGATION OR NAVIGATIONAL AIDS OR FACILITIES

77.13 Applicability.

This subpart describes the standards used for determining obstructions to air navigation, navigational aids, or navigational facilities. These standards apply to the following:

(a) Any object of natural growth, terrain, or permanent or temporary construction or alteration, including equipment or materials used and any permanent or temporary apparatus.

(b) The alteration of any permanent or temporary existing structure by a change in its height, including appurtenances, or lateral dimensions, including equipment or material used therein.

77.15 Scope.

(a) This subpart describes standards used to determine obstructions to air navigation that may affect the safe and efficient use of navigable airspace and the operation of planned or existing air navigation and communication facilities. Such facilities include air navigation aids, communication equipment, airports, Federal airways, instrument approach or departure procedures, and approved off-airway routes.

(b) Objects that are considered obstructions under the standards described in this subpart are presumed hazards to air navigation unless further aeronautical study concludes that the object is not a hazard. Once further aeronautical study has been initiated, the FAA will use the standards in this subpart, along with FAA policy and guidance material, to determine if the object is a hazard to air navigation.

(c) The FAA will apply these standards with reference to an existing airport facility, and airport proposals received by the FAA, or the appropriate military service, before it issues a final determination.

(d) For airports having defined runways with specially prepared hard surfaces, the primary surface for each runway extends 200 feet beyond each end of the runway. For airports having defined strips or pathways used regularly for aircraft takeoffs and landings, and designated runways, without specially prepared hard surfaces, each end of the primary surface for each such runway shall coincide with the corresponding end of the runway. At airports, excluding seaplane bases, having a defined landing and takeoff area with no defined pathways for aircraft takeoffs and landings, a determination must be made as to which portions of the landing and takeoff area are regularly used as landing and takeoff pathways. Those determined pathways must be considered runways, and an appropriate primary surface as defined in §77.19 will be considered as longitudinally centered on each such runway. Each end of that primary surface must coincide with the corresponding end of that runway.

(e) The standards in this subpart apply to construction or alteration proposals on an airport (including heliports and seaplane bases with marked lanes) if that airport is one of the following before the issuance of the final determination:
(1) Available for public use and is listed in the Airport/Facility Directory, Supplement Alaska, or Supplement Pacific of the U.S. Government Flight Information Publications; or

(2) A planned or proposed airport or an airport under construction of which the FAA has received actual notice, except DOD airports, where there is a clear indication the airport will be available for public use; or,

(3) An airport operated by a Federal agency or the DOD; or,

(4) An airport that has at least one FAA-approved instrument approach.

77.17 Obstruction standards.

(a) An existing object, including a mobile object, is, and a future object would be an obstruction to air navigation if it is of greater height than any of the following heights or surfaces:

(1) A height of 499 feet AGL at the site of the object.

(2) A height that is 200 feet AGL, or above the established airport elevation, whichever is higher, within 3 nautical miles of the established reference point of an airport, excluding heliports, with its longest runway more than 3,200 feet in actual length, and that height increases in the proportion of 100 feet for each additional nautical mile from the airport up to a maximum of 499 feet.

(3) A height within a terminal obstacle clearance area, including an initial approach segment, a departure area, and a circling approach area, which would result in the vertical distance between any point on the object and an established minimum instrument flight altitude within that area or segment to be less than the required obstacle clearance.

(4) A height within an en route obstacle clearance area, including turn and termination areas, of a Federal Airway or approved off-airway route, that would increase the minimum obstacle clearance altitude.

(5) The surface of a takeoff and landing area of an airport or any imaginary surface established under §77.19, 77.21, or 77.23. However, no part of the takeoff or landing area itself will be considered an obstruction.

(b) Except for traverse ways on or near an airport with an operative ground traffic control service furnished by an airport traffic control tower or by the airport management and coordinated with the air traffic control service, the standards of paragraph (a) of this section apply to traverse ways used or to be used for the passage of mobile objects only after the heights of these traverse ways are increased by:

(1) 17 feet for an Interstate Highway that is part of the National System of Military and Interstate Highways where overcrossings are designed for a minimum of 17 feet vertical distance.

(2) 15 feet for any other public roadway.

(3) 10 feet or the height of the highest mobile object that would normally traverse the road, whichever is greater, for a private road.

(4) 23 feet for a railroad.
(5) For a waterway or any other traverse way not previously mentioned, an amount equal to the height of the highest mobile object that would normally traverse it.

77.19 Civil airport imaginary surfaces.

The following civil airport imaginary surfaces are established with relation to the airport and to each runway. The size of each such imaginary surface is based on the category of each runway according to the type of approach available or planned for that runway. The slope and dimensions of the approach surface applied to each end of a runway are determined by the most precise approach procedure existing or planned for that runway end.

(a) Horizontal surface. A horizontal plane 150 feet above the established airport elevation, the perimeter of which is constructed by Swinging arcs of a specified radii from the center of each end of the primary surface of each runway of each airport and connecting the adjacent arcs by lines tangent to those arcs. The radius of each arc is:

(1) 5,000 feet for all runways designated as utility or visual;

(2) 10,000 feet for all other runways. The radius of the arc specified for each end of a runway will have the same arithmetical value. That value will be the highest determined for either end of the runway. When a 5,000-foot arc is encompassed by tangents connecting two adjacent 10,000-foot arcs, the 5,000-foot arc shall be disregarded on the construction of the perimeter of the horizontal surface.

(b) Conical surface. A surface extending outward and upward from the periphery of the horizontal surface at a slope of 20 to 1 for a horizontal distance of 4,000 feet.

(c) Primary surface. A surface longitudinally centered on a runway. When the runway has a specially prepared hard surface, the primary surface extends 200 feet beyond each end of that runway; but when the runway has no specially prepared hard surface, the primary surface ends at each end of that runway. The elevation of any point on the primary surface is the same as the elevation of the nearest point on the runway centerline. The width of the primary surface is:

(1) 250 feet for utility runways having only visual approaches.

(2) 500 feet for utility runways having non-precision instrument approaches.

(3) For other than utility runways, the width is:

(i) 500 feet for visual runways having only visual approaches.

(ii) 500 feet for non-precision instrument runways having visibility minimums greater than three-fourths statute mile.

(iii) 1,000 feet for a non-precision instrument runway having a non-precision instrument approach with visibility minimums as low as three-fourths of a statute mile, and for precision instrument runways.

(iv) The width of the primary surface of a runway will be that width prescribed in this section for the most precise approach existing or planned for either end of that runway.

(d) Approach surface. A surface longitudinally centered on the extended runway centerline and extending outward and upward from each end of the primary surface. An approach surface is
applied to each end of each runway based upon the type of approach available or planned for that runway end.

(1) The inner edge of the approach surface is the same width as the primary surface and it expands uniformly to a width of:

   (i) 1,250 feet for that end of a utility runway with only visual approaches;

   (ii) 1,500 feet for that end of a runway other than a utility runway with only visual approaches;

   (iii) 2,000 feet for that end of a utility runway with a non-precision instrument approach;

   (iv) 3,500 feet for that end of a non-precision instrument runway other than utility, having visibility minimums greater than three-fourths of a statute mile;

   (v) 4,000 feet for that end of a non-precision instrument runway, other than utility, having a non-precision instrument approach with visibility minimums as low as three-fourths statute mile; and

   (vi) 16,000 feet for precision instrument runways.

(2) The approach surface extends for a horizontal distance of:

   (i) 5,000 feet at a slope of 20 to 1 for all utility and visual runways;

   (ii) 10,000 feet at a slope of 34 to 1 for all non-precision instrument runways other than utility; and

   (iii) 10,000 feet at a slope of 50 to 1 with an additional 40,000 feet at a slope of 40 to 1 for all precision instrument runways.

(3) The outer width of an approach surface to an end of a runway will be that width prescribed in this subsection for the most precise approach existing or planned for that runway end.

(c) Transitional surface. These surfaces extend outward and upward at right angles to the runway centerline and the runway centerline extended at a slope of 7 to 1 from the sides of the primary surface and from the sides of the approach surfaces. Transitional surfaces for those portions of the precision approach surface which project through and beyond the limits of the conical surface, extend a distance of 5,000 feet measured horizontally from the edge of the approach surface and at right angles to the runway centerline.

77.21 Department of Defense (DoD) airport imaginary surfaces.

(a) Related to airport reference points. These surfaces apply to all military airports. For the purposes of this section, a military airport is any airport operated by the DOD.

(1) Inner horizontal surface. A plane that is oval in shape at a height of 150 feet above the established airfield elevation. The plane is constructed by scribing an arc with a radius of 7,500 feet about the centerline at the end of each runway and interconnecting these arcs with tangents.
(2) Conical surface. A surface extending from the periphery of the inner horizontal surface outward and upward at a slope of 20 to 1 for a horizontal distance of 7,000 feet to a height of 500 feet above the established airfield elevation.

(3) Outer horizontal surface. A plane, located 500 feet above the established airfield elevation, extending outward from the outer periphery of the conical surface for a horizontal distance of 30,000 feet.

(b) Related to runways. These surfaces apply to all military airports.

(1) Primary surface. A surface located on the ground or water longitudinally centered on each runway with the same length as the runway. The width of the primary surface for runways is 2,000 feet. However, at established bases where substantial construction has taken place in accordance with a previous lateral clearance criteria, the 2,000-foot width may be reduced to the former criteria.

(2) Clear zone surface. A surface located on the ground or water at each end of the primary surface, with a length of 1,000 feet and the same width as the primary surface.

(3) Approach clearance surface. An inclined plane, symmetrical about the runway centerline extended, beginning 200 feet beyond each end of the primary surface at the centerline elevation of the runway end and extending for 50,000 feet. The slope of the approach clearance surface is 50 to 1 along the runway centerline extended until it reaches an elevation of 500 feet above the established airport elevation. It then continues horizontally at this elevation to a point 50,000 feet from the point of beginning. The width of this surface at the runway end is the same as the primary surface, it flares uniformly, and the width at 50,000 is 16,000 feet.

(4) Transitional surfaces. These surfaces connect the primary surfaces, the first 200 feet of the clear zone surfaces, and the approach clearance surfaces to the inner horizontal surface, conical surface, outer horizontal surface or other transitional surfaces. The slope of the transitional surface is 7 to 1 outward and upward at right angles to the runway centerline.

### 77.23 Heliport imaginary surfaces.

(a) Primary surface. The area of the primary surface coincides in size and shape with the designated take-off and landing area. This surface is a horizontal plane at the elevation of the established heliport elevation.

(b) Approach surface. The approach surface begins at each end of the heliport primary surface with the same width as the primary surface, and extends outward and upward for a horizontal distance of 4,000 feet where its width is 500 feet. The slope of the approach surface is 8 to 1 for civil heliports and 10 to 1 for military heliports.

(c) Transitional surfaces. These surfaces extend outward and upward from the lateral boundaries of the primary surface and from the approach surfaces at a slope of 2 to 1 for a distance of 250 feet measured horizontally from the centerline of the primary and approach surfaces.
Subpart D
AERONAUTICAL STUDIES AND DETERMINATIONS

77.25 Applicability.

(a) This subpart applies to any aeronautical study of a proposed construction or alteration for which notice to the FAA is required under 77.9.

(b) The purpose of an aeronautical study is to determine whether the aeronautical effects of the specific proposal and, where appropriate, the cumulative impact resulting from the proposed construction or alteration when combined with the effects of other existing or proposed structures, would constitute a hazard to air navigation.

(c) The obstruction standards in subpart C of this part are supplemented by other manuals and directives used in determining the effect on the navigable airspace of a proposed construction or alteration. When the FAA needs additional information, it may circulate a study to interested parties for comment.

77.27 Initiation of studies.

The FAA will conduct an aeronautical study when:

(a) Requested by the sponsor of any proposed construction or alteration for which a notice is submitted; or

(b) The FAA determines a study is necessary.

77.29 Evaluating aeronautical effect.

(a) The FAA conducts an aeronautical study to determine the impact of a proposed structure, an existing structure that has not yet been studied by the FAA, or an alteration of an existing structure on aeronautical operations, procedures, and the safety of flight. These studies include evaluating:

(1) The impact on arrival, departure, and en route procedures for aircraft operating under visual flight rules;

(2) The impact on arrival, departure, and en route procedures for aircraft operating under instrument flight rules;

(3) The impact on existing and planned public use airports;

(4) Airport traffic capacity of existing public use airports and public use airport development plans received before the issuance of the final determination;

(5) Minimum obstacle clearance altitudes, minimum instrument flight rules altitudes, approved or planned instrument approach procedures, and departure procedures;

(6) The potential effect on ATC radar, direction finders, ATC tower line-of-sight visibility, and physical or electromagnetic effects on air navigation, communication facilities, and other surveillance systems;
(7) The aeronautical effects resulting from the cumulative impact of a proposed construction or alteration of a structure when combined with the effects of other existing or proposed structures.

(b) If you withdraw the proposed construction or alteration or revise it so that it is no longer identified as an obstruction, or if no further aeronautical study is necessary, the FAA may terminate the study.

### 77.31 Determinations.

(a) The FAA will issue a determination stating whether the proposed construction or alteration would be a hazard to air navigation, and will advise all known interested persons.

(b) The FAA will make determinations based on the aeronautical study findings and will identify the following:

1. The effects on VFR/IFR aeronautical departure/arrival operations, air traffic procedures, minimum flight altitudes, and existing, planned, or proposed airports listed in §77.15(e) of which the FAA has received actual notice prior to issuance of a final determination.

2. The extent of the physical and/or electromagnetic effect on the operation of existing or proposed air navigation facilities, communication aids, or surveillance systems.

(c) The FAA will issue a Determination of Hazard to Air Navigation when the aeronautical study concludes that the proposed construction or alteration will exceed an obstruction standard and would have a substantial aeronautical impact.

(d) A Determination of No Hazard to Air Navigation will be issued when the aeronautical study concludes that the proposed construction or alteration will exceed an obstruction standard but would not have a substantial aeronautical impact to air navigation. A Determination of No Hazard to Air Navigation may include the following:

2. Limitations necessary to minimize potential problems, such as the use of temporary construction equipment.

3. Supplemental notice requirements, when required.

4. Marking and lighting recommendations, as appropriate.

(e) The FAA will issue a Determination of No Hazard to Air Navigation when a proposed structure does not exceed any of the obstruction standards and would not be a hazard to air navigation.

### 77.33 Effective period of determinations.

(a) A determination issued under this subpart is effective 40 days after the date of issuance, unless a petition for discretionary review is received by the FAA within 30 days after issuance. The determination will not become final pending disposition of a petition for discretionary review.

(b) Unless extended, revised, or terminated, each Determination of No Hazard to Air Navigation issued under this subpart expires 18 months after the effective date of the determination, or on the date the proposed construction or alteration is abandoned, whichever is earlier.
A Determination of Hazard to Air Navigation has no expiration date.

77.35 Extensions, terminations, revisions and corrections.

(a) You may petition the FAA official that issued the Determination of No Hazard to Air Navigation to revise or reconsider the determination based on new facts or to extend the effective period of the determination, provided that:

1. Actual structural work of the proposed construction or alteration, such as the laying of a foundation, but not including excavation, has not been started; and

2. The petition is submitted at least 15 days before the expiration date of the Determination of No Hazard to Air Navigation.

(b) A Determination of No Hazard to Air Navigation issued for those construction or alteration proposals not requiring an FCC construction permit may be extended by the FAA one time for a period not to exceed 18 months.

(c) A Determination of No Hazard to Air Navigation issued for a proposal requiring an FCC construction permit may be granted extensions for up to 18 months, provided that:

1. You submit evidence that an application for a construction permit/license was filed with the FCC for the associated site within 6 months of issuance of the determination; and

2. You submit evidence that additional time is warranted because of FCC requirements; and

3. Where the FCC issues a construction permit, a final Determination of No Hazard to Air Navigation is effective until the date prescribed by the FCC for completion of the construction. If an extension of the original FCC completion date is needed, an extension of the FAA determination must be requested from the Obstruction Evaluation Service (OES).

4. If the Commission refuses to issue a construction permit, the final determination expires on the date of its refusal.

Subpart E
PETITIONS FOR DISCRETIONARY REVIEW

77.37 General.

(a) If you are the sponsor, provided a substantive aeronautical comment on a proposal in an aeronautical study, or have a substantive aeronautical comment on the proposal but were not given an opportunity to state it, you may petition the FAA for a discretionary review of a determination, revision, or extension of a determination issued by the FAA.

(b) You may not file a petition for discretionary review for a Determination of No Hazard that is issued for a temporary structure, marking and lighting recommendation, or when a proposed structure or alteration does not exceed obstruction standards contained in subpart C of this part.
77.39 Contents of a petition.

(a) You must file a petition for discretionary review in writing and it must be received by the FAA within 30 days after the issuance of a determination under 77.31, or a revision or extension of the determination under 77.35.

(b) The petition must contain a full statement of the aeronautical basis on which the petition is made, and must include new information or facts not previously considered or presented during the aeronautical study, including valid aeronautical reasons why the determination, revisions, or extension made by the FAA should be reviewed.

(c) In the event that the last day of the 30-day filing period falls on a weekend or a day the Federal government is closed, the last day of the filing period is the next day that the government is open.

(d) The FAA will inform the petitioner or sponsor (if other than the petitioner) and the FCC (whenever an FCC-related proposal is involved) of the filing of the petition and that the determination is not final pending disposition of the petition.

77.41 Discretionary review results.

(a) If discretionary review is granted, the FAA will inform the petitioner and the sponsor (if other than the petitioner) of the issues to be studied and reviewed. The review may include a request for comments and a review of all records from the initial aeronautical study.

(b) If discretionary review is denied, the FAA will notify the petitioner and the sponsor (if other than the petitioner), and the FCC, whenever a FCC-related proposal is involved, of the basis for the denial along with a statement that the determination is final.

(c) After concluding the discretionary review process, the FAA will revise, affirm, or reverse the determination.

FAA Form 7460-1 (2-99) Supersedes Previous Edition

FAA Form 7460-1

Sacramento International Airport Land Use Compatibility Plan (Adopted December 12, 2013) C–15
Historically a paper form called a “7460-1” was required to be submitted to the FAA for any project proposed on airport property and certain projects near airports. Recently, the FAA has moved from paper forms to an on-line system of evaluating the effects of a proposed project on the national airspace system.

- The on-line system can be accessed at https://oeaaa.faa.gov.

This new system allows project proponents to submit and track their proposal as it progresses through the FAA evaluation process.

The purpose of this guidance is to supplement and clarify the FAA user guide for the 7460 website.

We recommend that the user first read the entire guide provided by the FAA, and then use this document to clarify some of the more complicated aspects of the online 7460 system.

When a project must be submitted to the FAA

CFR Title 14 Part 77.13 states that any person/organization who intends to sponsor any of the following construction or alterations must notify the Administrator of the FAA:

- Any construction or alteration exceeding 200 ft. above ground level
- Any construction or alteration:
  - within 20,000 ft. of a public use or military airport which exceeds a 100:1 surface from any point on the runway of each airport with at least one runway more than 3,200 ft.
  - within 10,000 ft. of a public use or military airport which exceeds a 50:1 surface from any point on the runway of each airport with its longest runway no more than 3,200 ft.
  - within 5,000 ft. of a public use heliport which exceeds a 25:1 surface
- Any highway, railroad or other traverse way whose prescribed adjusted height would exceed the above noted standards
- When requested by the FAA
- Any construction or alteration located on a public use airport or heliport regardless of height or location.

Create an account

Before accessing the features of the website, the user will be required to create a username and password to access the website.
Once a user has created an account, they will be able to log in and will be directed to the OE/AAA Portal Page. This page displays a summary of any projects which have been entered into the website, categorized by off-airport and on-airport projects.

**Adding a Sponsor**

Before a user can enter project specific information, a project sponsor must be created. A sponsor is the person who is ultimately responsible for the construction or alteration. All FAA correspondence will be addressed to the sponsor. The sponsor could be the airport manager for projects proposed by the airport, or the developer proposing off-airport construction. To create a sponsor contact, click “Add New Sponsor” on the “portal” page. From there the user can add sponsors for various projects.
When the user selects “Add New Sponsor”, they will be presented with the following screen:

**Add New Sponsor**

- The Sponsor can be you, your company, or your client. The sponsor is the person or business ultimately responsible for the construction or alteration. The sponsor appears as the addresses on all correspondence from the FAA.
- Please populate the following form to add or update a Sponsor.
- Required fields indicated with *.

**NOTE:** The party submitting information through the FAA website DOES NOT have to be the same as the sponsor. Often, a consultant or other party under direction from the sponsor makes the submittal through the website.
Creating a New Submittal

There are two options for creating a new 7460 submittal. Again on the left side, either click “Add New Case (off airport)” or “Add New Case (on airport)”.

There are some differences in the required fields for “on airport” vs. “off airport” but the differences are minor and self-explanatory. One tip: for off airport submittals there is a field for “requested marking/lighting”. If the user does not have a preference, select other from the pull down menu and in the “other field” state “no preference”.

OE/AAA Portal Page

Email Notifications

Circularized Case Notification
The most common “notice of” is construction. Select from pull down menu.

- Latitude and longitude must be entered for the structure/construction activity.
- Most 7460 submittals will require multiple points with lat/long unless the 7460 is for a pole/tower/ or other single point object. Buildings and construction areas all require points indicating the extents of the building or area. More information is provided below on how to add additional points to a submittal.
- There is a field to describe the activity taking place. In some complex activities the field does not provide enough room for the required text. An additional explanatory letter can be attached. Additional information is provided in this section on how to add a letter or document to the submittal.
- Red asterisks indicate the required fields.
- Unless there has been a previous aeronautical study for this submittal leave the “prior study” fields blank.
- Only select “common frequency bands” if the proposed structure will transmit a signal.

Accurate lat/long and site elevation is critical for an accurate airspace determination. It is recommended that survey quality data be obtained from a recent survey, a GPS unit, or worst case, scaled from a topo quad.
If the submittal is a building or construction area that is more than a single lat/long point the user must save the data first. Click save at the bottom of the page. This will bring up a summary screen of the case. To add more points click “clone” under the heading “actions”.

The clone tool copies all the relevant information to a new page where an additional lat/long and elevation can be entered. However, the clone process does not number the various points of a proposed project. When entering the details for a point (see Image 5) it is helpful if the user assigns a number to the point and references the total number of points for the project (e.g. point 2 of 20). The numbering can be included in the project “description/remarks” field for each point.

It should be noted that each individual point associated with a project (e.g. each corner of a building) is evaluated individually, thus the importance of including a numbering system (2 of 20) in the text/description box.

Once done, click “save” again. Now the user will see two records under the “project summary” heading. Continue this process of cloning for all the remaining points.

Once all the points have been entered, each point must be verified. There is a red X with the words “verify map” indicating the user has not verified the location. Click Verify Map, a popup will display the lat/long point on a topo map and the user must verify that it is in the correct location. After clicking “verify map” on the popup, the red X will become a blue checkmark. It seems to be more efficient to enter all of the points associated with a project and then return to verify each point on the map at one time.
All on-airport project submittals must have a “project sketch” included. Under the “actions” column select “upload a PDF”. Once you have uploaded a sketch for all the points associated with the project the red X under “sketch” will turn to a green check mark. Off-airport projects do not require a “project sketch”, but the user can still upload one for informational purposes.

If the user needs to add any other information such as an explanatory letter, clicking on “upload a PDF” will allow the user to upload more documents, although only one at a time. Keep in mind that if additional PDFs or information are being provided, like the project sketch it must be uploaded to every point associated with the project.

Once the maps have been verified and sketches uploaded for all points associated with the case, the user will be able to submit the 7460 to the FAA for review.
Status of Submitted Projects

To check the status of a submittal, click on either “my cases (off airport)” or “my cases (on airport)” to see a list of what has been submitted. Each of the multiple points associated with one project will be listed as if they are separate, although still associated. The points will have a status:

### Project Status Definitions:

**Draft:** Cases that have been saved by the user but have not been submitted to the FAA.

**Waiting:** Cases that have not been submitted to the FAA and are waiting for an action from the user, either to verify the map or attach a sketch.

**Accepted:** Cases that have been submitted to the FAA.

**Add Letter:** Cases that have been reviewed by the FAA and require additional information from the user.

**Work in Progress:** Cases that are being evaluated by the FAA.

**Determined:** Cases that have a completed aeronautical study and an FAA determination.

**Terminated:** Cases that are no longer valid.

These definitions are also shown at the bottom of the summary screen.

Airport Land Use Compatibility Concepts

INTRODUCTION

This appendix provides basic information regarding the concepts and rationale used to develop the compatibility policies and maps set forth in Chapter 2 of this Sacramento International Airport Land Use Compatibility Plan. Some of the material is excerpted directly from the California Airport Land Use Planning Handbook published by the California Division of Aeronautics in October 2011. Other portions are based upon concepts that evolved from technical input obtained during review and discussion of preliminary drafts of key policies.

State law requires that airport land use commissions “be guided by” the information presented in the Handbook. Despite the statutory reference to it, though, the Handbook does not constitute formal state policy or regulation. Indeed, adjustment of the guidelines to fit the circumstances of individual airports is suggested by the Handbook. The Handbook guidance does not supersede or otherwise take precedence over the policies adopted by the Sacramento Area Council of Governments, acting in its capacity as the Airport Land Use Commission (ALUC) for Sacramento, Sutter, Yolo, and Yuba Counties, in this Compatibility Plan. Furthermore, this appendix itself does not constitute ALUC policy. If the material herein conflicts in any manner with the actual policy language or maps, the policies and maps prevail.

As outlined in the Handbook, the noise and safety compatibility concerns of ALUCs fall into four categories. This Compatibility Plan refers to these categories as “layers.”

- **Noise**: As defined by cumulative noise exposure contours describing noise from aircraft operations near an airport.
- **Overflight**: The impacts of routine aircraft flight over a community.
- **Safety**: From the perspective of minimizing the risks of aircraft accidents beyond the runway environment.
- **Airspace Protection**: Accomplished by limits on the height of structures and other objects in the airport vicinity and restrictions on other uses that potentially pose hazards to flight.

The documentation in the remainder of this appendix is organized under these four categories. Under each of the four compatibility category headings, the discussion is organized around four topics:

- **Compatibility Objective**: The objective to be sought by establishment and implementation of the compatibility policies;
- **Measurement**: The scale on which attainment of the objectives can be measured;
- **Compatibility Strategies**: The types of strategies which, when formulated as compatibility policies, can be used to accomplish the objectives; and
- **Basis for Setting Criteria**: The factors which should be considered in setting the respective compatibility criteria.
Noise

Noise is perhaps the most basic airport land use compatibility concern. Certainly, it is the most noticeable form of airport impact.

Compatibility Objective

The purpose of noise compatibility policies is to avoid establishment of new noise-sensitive land uses in the portions of an airport environs that are exposed to significant levels of aircraft noise, taking into account the characteristics of the airport and the community surrounding the airport.

Measurement

For the purposes of airport land use compatibility planning, noise generated by the operation of aircraft to, from, and around an airport is primarily measured in terms of the cumulative noise levels of all aircraft operations. In California, the cumulative noise level metric established by state regulations, including for measurement of airport noise, is the Community Noise Equivalent Level (CNEL). Cumulative noise level metrics measure the noise levels of all aircraft operating at an airport on an average day (1/365) of the year. The calculations take into account not only the number of operations of each aircraft type and the noise levels they produce, but also their distribution geographically (the runways and flight tracks used) and by time of day. To reflect an assumed greater community sensitivity to nighttime and evening noise, the CNEL metric counts events during these periods as being louder than actually measured.

Cumulative noise level metrics provide a single measure of the average sound level in decibels (dB) to which any point near an airport is exposed over the course of a day. Although the maximum noise levels produced by individual aircraft are a major component of the calculations, cumulative noise level metrics do not explicitly measure these peak values. Cumulative noise levels are usually illustrated on airport area maps as contour lines connecting points of equal noise exposure. Mapped noise contours primarily show areas of significant noise exposures—ones affected by high concentrations of aircraft takeoffs and landings.

For civilian airports, noise contours are typically calculated using the Federal Aviation Administration’s Integrated Noise Model (INM) computer program. For military airports, the similar Department of Defense NOISEMAP model is used. Inputs to these models are of two basic types: standardized data regarding aircraft performance and noise levels generated (this data can be adjusted for a particular airport if necessary); and airport-specific data including aircraft types and number of operations, time of day of aircraft operations, runway usage distribution, and the location and usage of flight tracks. Airport elevation and surrounding topographic data can also be entered. For airports with airport traffic control towers, some of these inputs can be obtained from recorded data. Noise monitoring and radar flight tracking data available for airports in metropolitan areas are other sources of valuable information. At most airports, though, the individual input variables must be estimated.

Compatibility Strategies

The basic strategy for achieving noise compatibility in an airport’s vicinity is to limit development of land uses that are particularly sensitive to noise. The most acceptable land uses are ones that either involve few people (especially people engaged in noise-sensitive activities) or generate significant noise levels themselves (such as other transportation facilities or some industrial uses).
California state law regards any residential land uses as normally incompatible where the noise exposure exceeds 65 dB CNEL (although the state airport noise regulations explicitly apply only to identified “noise problem airports” in the context of providing the ability of these airports to operate under a noise variance from the State, the Handbook and other state guidelines extend this criterion to all airports as discussed below). This standard, however, is set with respect to high-activity airports, particularly major air carrier airports, in urban locations, where ambient noise levels are generally higher than in suburban and rural areas. As also discussed below and as provided in the Handbook, a lower threshold of incompatibility is often appropriate at certain airports, particularly around airports in suburban or rural locations where the ambient noise levels are lower than those found in more urban areas.

In places where the noise exposure is not so severe as to warrant exclusion of new residential development, the ideal strategy is to have very low densities—that is, parcels large enough that the dwelling can be placed in a less impacted part of the property. In urban areas, however, this strategy is seldom viable. The alternative for such locations is to encourage high-density, multi-family residential development with little, if any, outdoor areas, provided that the 65 dB CNEL standard and limitations based upon safety are not exceeded. Compared to single-family subdivisions, ambient noise levels are typically higher in multi-family developments, outdoor living space is less, and sound insulation features can be more easily added to the buildings. All of these factors tend to make aircraft noise less intrusive.

Sound insulation is an important requirement for residential and other noise-sensitive indoor uses in high noise areas. The California Building Code requires that sufficient acoustic insulation be provided in any habitable rooms of new hotels, motels, dormitories, dwellings other than detached single-family residences to assure that aircraft noise is reduced to an interior noise level of 45 dB CNEL or less. To demonstrate compliance with this standard, an acoustical analysis must be done for any residential structure proposed to be located where the annual CNEL exceeds 60 dB. This Compatibility Plan extends the 45 dB CNEL interior noise limit standard to single-family dwellings. The Compatibility Plan further requires dedication of an avigation easement (see later discussion in this appendix) as a condition for development approval in locations where these standards come into play.

**Basis for Setting Criteria**

Compatibility criteria related to cumulative noise levels are well-established in federal and state laws and regulations. The California Airport Noise Regulations (California Code of Regulations Section 5000 et seq.) states that:

“The level of noise acceptable to a reasonable person residing in the vicinity of an airport is established as a community noise equivalent level (CNEL) value of 65 dB for purposes of these regulations. This criterion level has been chosen for reasonable persons residing in urban residential areas where houses are of typical California construction and may have windows partially open. It has been selected with reference to speech, sleep and community reaction.”

No airport declared by a county’s board of supervisors as having a “noise problem” is to operate in a manner that result in incompatible uses being located within the 65 dB CNEL contour. Incompatible uses are defined as being: residences of all types; public and private schools; hospitals and convalescent homes; and places of worship. However, these uses are not regarded as incompatible where acoustical insulation necessary to reduce the interior noise level to 45 dB CNEL has been installed or the airport proprietor has acquired an avigation easement for aircraft noise.

As noted in the regulations, the 65 dB CNEL standard is set with respect to urban areas. For many airports and many communities, 65 dB CNEL is too high to be considered acceptable to “reasonable per-
sons.” Through a process called “normalization,” adjustments can be made to take into account such factors as the background noise levels of the community and previous exposure to particular noise sources. This process suggests, for example, that 60 dB CNEL may be a more suitable criterion for suburban communities not exposed to significant industrial noise and 55 dB CNEL may be appropriate for quiet suburban or rural communities remote from industrial noise and truck traffic. On the other hand, even though exceeding state standards, 70 dB CNEL may be regarded as an acceptable noise exposure in noisy urban residential communities near industrial areas and busy roads.

Industrial activity and transportation noise are undoubtedly two of the most prominent contributors to background noise levels in a community. According to a U.S. Environmental Protection Agency (EPA) study however, the variable that correlates best with ambient noise levels across a broad range of communities is population density (Population Distribution of the United States as a Function of Outdoor Noise Level, EPA Report No. 550/9-74-009, June 1974). This study established the following formula as a means of estimating the typical background noise level of a community:

\[ DNL_{EPA} = 22 + 10 \times \log(p) \]

where “p” is the population density measured in people per square statute mile.

These factors are reflected in the policies of this Compatibility Plan. The ALUC considers 60 dB CNEL to be the maximum normally acceptable noise exposure for new residential development near Nevada County Airport. Based upon the above EPA equation, these criteria are a minimum of 5 dB above the predicted ambient noise levels in the respective communities.

Similar considerations come into play with respect to establishing maximum acceptable noise exposure for nonresidential land uses, particularly those that are noise sensitive. For schools, lodging, and other such uses, a higher noise exposure may be tolerated in noisy urban communities than in quieter suburban and rural areas. For uses that are not noise sensitive or which generate their own noise, the maximum acceptable noise exposure levels tend to be the same regardless of ambient noise conditions. The criteria listed in Chapter 2 of this Compatibility Plan are set with these various factors in mind.

OVERFLIGHT

Experience at many airports has shown that noise-related concerns do not stop at the boundary of the outermost mapped CNEL contours. Many people are sensitive to the frequent presence of aircraft overhead even at low levels of noise. These reactions can mostly be expressed in the form of annoyance.

The Handbook notes that at many airports, particularly air carrier airports, complaints often come from locations beyond any of the defined noise contours. Indeed, heavily used flight corridors to and from metropolitan areas are known to generate noise complaints 50 miles or more from the associated airport. The basis for such complaints may be a desire and expectation that outside noise sources not be intrusive—or, in some circumstances, even distinctly audible—above the quiet, natural background noise level. Elsewhere, especially in locations beneath the traffic patterns of general aviation airports, a fear factor also contributes to some individuals’ sensitivity to aircraft overflights.

While these impacts may be important community concerns, the question of importance here is whether any land use planning actions can be taken to avoid or mitigate the impacts or otherwise address the concerns. Commonly, when overflight impacts are under discussion in a community, the focus is on modification of the flight routes. Indeed, some might argue that overflight impacts should be addressed solely through the aviation side of the equation—not only flight route changes, but other modifications
to where, when, and how aircraft are operated. Such changes are not always possible because of terrain, aircraft performance capabilities, FAA regulations, and other factors. In any case, though, ALUCs are particularly limited in their ability to deal with overflight concerns. Most significantly, they have no authority over aircraft operations. The most they can do to bring about changes is to make requests or recommendations. Even with regard to land use, the authority of ALUCs extends only to proposed new development and the delineation of an airport’s overall influence area. The authority and responsibility for implementing the Compatibility Plan’s policies and criteria rests with the local governments.

These limitations notwithstanding, there are steps which ALUCs can and should take to help minimize overflight impacts.

**Compatibility Objective**

In an idealistic sense, the compatibility objective with respect to overflight is the same as for noise: avoid new land use development that can disrupt activities and lead to annoyance and complaints. However, given the extensive geographic area over which the impacts occur, this objective is unrealistic except relatively close to the airport. A more realistic objective of overflight compatibility policies therefore is to help notify people about the presence of overflights near airports so that they can make more informed decisions regarding acquisition or lease of property in the affected areas.

**Measurement**

Cumulative noise metrics such as CNEL are well-suited for use in establishing land use compatibility policy criteria and are the only noise metrics for which widely accepted standards have been adopted. However, these metrics are not very helpful in determining the extent of overflight impact areas. Locations where overflight concerns may be significant are typically well beyond where noise contours can be drawn with precision. Flight tracks tend to be quite divergent and noise monitoring data is seldom available. Moreover, even if the contours could be drawn precisely, the noise levels they would indicate may not be much above the ambient noise levels.

For the purposes of airport land use compatibility planning, two other forms of noise exposure information are more useful. One measure is the momentary, maximum sound level ($L_{\text{max}}$) experienced on the ground as the aircraft flies over while landing at and taking off from a runway. These noise levels can be depicted in the form of a noise “footprint” as shown in Figure D1 for a variety of airline and general aviation aircraft. Each of these footprints is broadly representative of those produced by other aircraft similar to the ones shown. The actual sound level produced by any single aircraft takeoff or landing will vary not only among specific makes and models of aircraft, but also from one operation to another of identical aircraft.

In examining the footprints, two additional points are important to note. One is the importance of the outermost contour. This noise level (65 dBA $L_{\text{max}}$) is the level at which interference with speech begins to be significant. Land uses anywhere within the noise footprint of a given aircraft would experience a noise level, even if only briefly, that could be disruptive to outdoor conversation. Indoors, with windows closed, the aircraft noise level would have to be at least 20 dBA louder to present similar impacts. A second point to note concerns the differences among various aircraft, particularly business jets. As the data shows, business jets manufactured in the 1990s are much quieter than those of 10 and 20 years earlier. The impacts of the 1990s era jets are similar to those of twin-engine piston aircraft and jets being made in the 2000s are quieter yet. At many general aviation airports, the size of the CNEL contours is driven by a relatively small number of operations by the older, noisier business jets. These aircraft are
gradually disappearing from the nationwide aircraft fleet and will likely be mostly gone within 20 years, but at this point in time it is uncertain when they will be completely eliminated.

Another useful form of overflight information is a mapping of the common flight tracks used by aircraft when approaching and departing an airport. Where available, recorded radar data is an ideal source for flight track mapping. Even more revealing is to refine the simple flight track mapping with data such as the frequency of use and/or aircraft altitudes. Chapter 3 includes maps showing areas frequently overflown by aircraft and the resulting noise contours for Sacramento International Airport.

Compatibility Strategies

As noted above, the ideal land use compatibility strategy with respect to overflight annoyance is to avoid development of new residential and other noise-sensitive uses in the affected locations. To the extent that this approach is not practical, other strategies need to be explored.

The strategy emphasized in this 
Compatibility Plan
 is to help people with above-average sensitivity to aircraft overflights—people who are highly annoyed by overflights—to avoid living in locations where frequent overflights occur. This strategy involves making people more aware of an airport’s proximity and its current and potential aircraft noise impacts on the community before they move to the area. This can be accomplished through buyer awareness measures such as dedication of avigation or overflight easements, recorded deed notices, and/or real estate disclosure statements. In new residential developments, posting of signs in the real estate sales office and/or at key locations in the subdivision itself can be further means of alerting the initial purchasers about the impacts (signs, however, generally do not remain in place beyond the initial sales period and therefore are of little long-term value).

A second strategy is to minimize annoyance in by promoting types of land uses that tend to mask or reduce the intrusiveness of aircraft noise. Although this strategy does not directly appear in the overflight policies of this 
Compatibility Plan
, the objectives of the plan would be well-served if local jurisdictions take this concept into consideration in their own planning efforts. To the extent that residential land uses must be located in aircraft overflight areas, multi-family residences—because they tend to have comparatively little outdoor living areas, fewer external walls through which aircraft noise can intrude, and relatively high noise levels of their own—are preferable to single-family dwellings. Particularly undesirable are “ranchette” style residential areas consisting of large (about an acre on average) lots. Such developments are dense enough to expose many people to overflight noise, yet sufficiently rural in character that background noise levels are likely to be low.

Basis for Setting Criteria

In California, the most definitive guidance on where overflight impacts are significant or what actions should be taken in response comes from a state law that took effect in January 2004. California statutes (Business and Profession Code Section 11010 and Civil Code Sections 1103 and 1353) now require most residential real estate transactions, including all involving new subdivisions, to include disclosure that an airport is nearby. The area encompassed by the disclosure requirements is two miles from the airport or the airport influence area established by the county’s airport land use commission. The law defines the airport influence area as “the area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses as determined by an airport land use commission.” This 
Compatibility Plan
 requires that the disclosure of airport proximity be applied to all new development within both the primary and secondary airport influence areas and recommends that disclosure be provided as part of all real estate transactions involving private property, especially any sale, lease, or rental of residential property.
Safety

Compared to noise, safety is in many respects a more difficult concern to address in airport land use compatibility policies. A major reason for this difference is that safety policies address uncertain events that may occur with occasional aircraft operations, whereas noise policies deal with known, more or less predictable events which do occur with every aircraft operation. Because aircraft accidents happen infrequently and the time, place, and consequences of an individual accident’s occurrence cannot be predicted, the concept of risk is central to the assessment of safety compatibility.

Compatibility Objective

The overall objective of safety compatibility criteria is to minimize the risks associated with potential off-airport aircraft accidents and emergency landings beyond the runway environment. There are two components to this objective:

- Safety on the Ground: The most fundamental safety compatibility component is to provide for the safety of people and property on the ground in the event of an aircraft accident near an airport.
- Safety for Aircraft Occupants: The other important component is to enhance the chances of survival of the occupants of an aircraft involved in an accident that takes place beyond the immediate runway environment.

Measurement

Because aircraft accidents happen infrequently, measuring the risks associated with their occurrence is difficult. It is necessary to look beyond an individual airport in order to assemble enough data to be statistically valid. It is beyond the intent of this discussion to provide statistical data about aircraft accidents. Much can be found on that topic in the Handbook. However, certain aspects of aircraft accidents are necessary to discuss in that they have a direct bearing on land use compatibility strategies.

From the standpoint of land use planning, two variables determine the degree of risk posed by potential aircraft accidents: frequency and consequences.

The frequency variable measures where and when aircraft accidents occur in the vicinity of an airport. More specifically, these two elements can be described as follows:

- Spatial Element: The spatial element describes where aircraft accidents can be expected to occur. Of all the accidents that take place in the vicinity of airports, what percentage occurs in any given location?
- Time Element: The time element adds a when variable to the assessment of accident frequency. In any given location around a particular airport, what is the chance that an accident will occur in a specified period of time?

Spatial Distribution of Aircraft Accidents

Of these two elements, the spatial element is the one most meaningfully applied to land use compatibility planning around an individual airport. Looking at airports nationwide, enough accidents have occurred to provide useful data regarding where they mostly occur in the environs of airports. As described below, the Handbook uses this data to define a set of safety zones. Additionally, the relative con-
centration of accidents in certain parts of the airport environs is a key consideration in the establishment of compatibility criteria applicable within those zones.

In contrast, the time element is not very useful for land use compatibility planning purposes for several reasons. First, at any given airport, the number of accidents is, with rare exceptions, too few to be statistically meaningful in determining where future accidents might occur. Secondly, a calculation of accident frequency over time depends upon the size of the area under consideration—the smaller the area examined, the less likely it is that an accident will occur in that spot. Lastly, even if the accident frequency over a period of time is calculated, there are no clear baselines with which to compare the results—is once per 100 or 1,000 years significant or not?

The Handbook presents a set of diagrams indicating where accidents are most likely to occur around airline and general aviation airports. Figures D-2 and D-3 show the spatial distribution of general aviation aircraft accidents in the vicinity of airports. (Note that these charts show data for all general aviation accidents in the Handbook database. Data on accidents associated with different lengths of runway is also provided, though, and is considered in delineation of the safety zones depicted in Chapter 3 of this Compatibility Plan.)

The charts reveal several facts:

- About half of arrival accidents and a third of departure accidents take place within the FAA-defined runway protection zone for a runway with a low-visibility instrument approach procedure (a 2,500-foot long trapezoid, varying from 1,000 feet wide at the inner edge to 1,750 feet in width at the outer end). This fact lends validity to the importance of the runway protection zones as an area within which land use activities should be minimal.

- Although the runway protection zones represent the locations within which risk levels are highest, a significant degree of risk exists well beyond the runway protection zone boundaries. Among all near-airport (within 5 miles) accidents, over 80% are concentrated within 1.5 to 2.0 miles of a runway end.

- Arrival accidents tend to be concentrated relatively close to the extended runway centerline. Some 80% occur within a strip extending 10,000 feet from the runway landing threshold and 2,000 feet to each side of the runway centerline.

- Departure accidents are comparatively more dispersed laterally from the runway centerline, but are concentrated closer to the runway end. Many departure accidents also occur lateral to the runway itself, particularly when the runway is long. Approximately 80% of the departure accident sites lie within an area 2,500 from the runway centerline and 6,000 feet beyond the runway end or adjacent to the runway.

To provide some sense of order to the scatter of individual accident points, an analysis presented in the Handbook involves aggregating the accident location points (the scatter diagrams of where accidents have occurred relative to the runway) in a manner that better identifies where the accident sites are most concentrated. The results are presented as risk intensity contours—Figure D-2 shows arrival accident risks and Figure D-3 portrays departure accident risks. The two drawings divide the near-airport accident location points into five groups of 20% each (note that only accident sites that were not on a runway, but were within 5 miles of an airport are included in the database). The 20% contour represents the highest or most concentrated risk intensity, the 40% contour represents the next highest risk intensity, and so on up to 80%. The final 20% of the accident sites are beyond the 80% contour. Each contour is drawn so as to encompass 20% of the points within the most compact area. The contours are irregular in shape. No attempt has been made to create geometric shapes. However, the risk con-
tours can serve as the basis for creating geometric shapes that can then be used as safety zones. The Handbook contains several examples. The Department of Defense, through its Air Installation Compatible Use Zones (AICUZ) program, has followed a similar process to establish safety zone guidelines for military airports.

The Handbook takes the additional step of translating the risk contours into several sets of generic safety zones having regular geometric shapes. Generic safety zones are illustrated for different types and lengths of runways. The shapes of these zones reflect not just the accident distribution data, but also the ways in which different phases of aircraft operations create different accident risk characteristics near an airport. For most runways, the Handbook suggests creation of six zones. The locations, typical dimensions, and characteristics of the accident risks within each zone are outlined in Table D1. In more general terms, the relative degree of the risk exposure in each zone can be described as listed below.

- **Zone 1** clearly is exposed to the greatest risk of aircraft accidents. For civilian airports, the dimensions of this zone are established by FAA standards. The FAA encourages airport ownership of this zone and provides specific land use standards to the extent that land is airport owned. Where the land is not airport owned, the FAA says these standards serve as recommendations. Zone 1 at military airports matches the clear zones defined by the Department of Defense.

- **Zone 2** lies beyond Zone 1 and also has a significant degree of risk as reflected in both national and local accident location data. At military airports, this zone is equivalent to Accident Potential Zone I.

- **Zone 3** has less risk than Zone 2, but more than Zones 4, 5, or 6. Zone 3 encompasses locations where aircraft often turn at low altitude while approaching or departing the runway.

- **Zone 4** lies along the extended runway centerline beyond Zone 2 and is especially significant at airports that have straight-in instrument approach procedures or a high volume of operations that result in an extended traffic pattern. This zone is equivalent to Accident Potential Zone II at military airports.

- **Zone 5** is a unique area lying adjacent to the runway and, for most airports, lies on airport property. The risk is comparable to Zone 4.

- **Zone 6** contains the aircraft traffic pattern. Although a high percentage of accidents occur within Zone 6, for any given runway Zone 6 is larger than all the other zones combined. Relative to the other zones, the risks in Zone 6 are much less, but are still greater than in locations more distant from the airport.

Although accident location data, together with information on how aircraft flight parameters affect where accidents occur, are the bases for delineation of the generic safety zones, the Handbook indicates that adjustments to the zone sizes and shapes must be made in recognition of airport-specific characteristics. Among these characteristics are:

- The particular mix of aircraft types operating at the airport. Larger aircraft generally are faster than smaller planes and thus fly longer and wider traffic patterns or make straight-in approaches.

- The overall volume of aircraft operations. At busy airports, a larger traffic pattern is common because aircraft have to get in sequence for landing.

- Nearby terrain or other airports. These physical features may, for example, limit a traffic pattern to a single side of the airport or dictate “nonstandard” approach and departure routes.
› Instrument approach procedures. Aircraft following these procedures typically fly long, straight-in, gradual descents to the runway. In some cases, though, an approach route may be aligned at an angle to the runway rather than straight in.

› Existence of an air traffic control tower. When a tower is present, controllers may direct or allow pilots to fly unusual routes in order to expedite traffic flow. By comparison, at relatively busy but non-towered airports, aircraft mostly follow the “standard” pattern dictated by federal aviation regulations.

› A dominant direction of traffic flow. As reflected in the Handbook analysis of accident locations, landing aircraft tend to follow routes directly in line with the runway during final descent and thus accident sites also are concentrated along this alignment. Departing aircraft are more likely to turn to head to their intended destination and the accident pattern is thus more dispersed. On runways where the flow of aircraft operations is almost always in one direction, this distinction in accident patterns is considered.

Radar data is particularly helpful in showing exactly where aircraft fly when approaching or departing an airport. This data can be used to further support adjustments to the safety zones based upon the above characteristics. Radar data, though, is not available for many of outlying airports. In these instances, information on normal traffic pattern locations can be obtained through contact with local flight instructors and others highly familiar with a particular airport.

**Accident Consequences**

The consequences variable describes what happens when an aircraft accident occurs. Specific measures can be defined in terms of deaths, injuries, property damage, or other such characteristics. In many respects, the consequences component of aircraft accident risk assessment is a more important variable than accident frequency. Not only can a single accident cost many lives, it can indirectly force operational changes or even airport closure.

Relatively little data is available specifically documenting the consequences of aircraft accidents. Except with regard to numbers of deaths or injuries to people on the ground, data on various aspects of aircraft accidents must be used to infer what the consequences have been. Swath size is one useful piece of information. It indicates the area over which accident debris is spread. Swath size in turn depends upon the type of aircraft and the nature of the accident: was the aircraft in controlled flight (an engine failure for example), but then collided with something on the ground or did a catastrophic event (such as a mid-air collision or stall-spin) result in the aircraft making an uncontrolled descent? For small general aviation aircraft, the swath size data suggests that a controlled emergency landing in which the aircraft occupants have a strong chance of surviving is possible in an area about the size of a football field: 75 feet by 300 feet or about 0.5 acre. For larger aircraft, the minimum flight speed is so much higher that the consequences for people on board and anyone on the ground are likely to be high regardless of the land use or terrain characteristics.

**Compatibility Strategies**

The relatively low numbers of deaths and injuries from aircraft accidents is sometimes cited as indicating that the risks are low. Clearly, though, the more people occupying the critical areas around airports, the greater the risks are. Aircraft accidents may be rare occurrences, but when they occur, the consequences can be severe.
From a land use compatibility perspective, it is therefore essential to avoid conditions that can lead to catastrophic results. Basically, the question is: what land use planning measures can be taken to reduce the severity of an aircraft accident if one occurs in a particular location near an airport? Although there is a significant overlap, specific strategies must consider both components of the safety compatibility objective: protecting people and property on the ground; and, primarily for general aviation airports, enhancing safety for aircraft occupants. In each case, the primary strategy is to limit the intensity of use (the number of people concentrated on the site) in locations most susceptible to an off-airport aircraft accident. This is accomplished by three types of criteria.

**Density and Intensity Limitations**

Establishment of criteria limiting the maximum number of dwellings or people in areas close to the airport is the most direct method of reducing the potential severity of an aircraft accident. In setting these criteria, consideration must be given to the two different forms of aircraft accidents: those in which the aircraft is descending, but is flying and under directional control of the pilot; and those in which the aircraft is out of control as it falls. Additionally, these data do not include the incidents in which the pilot made a successful emergency landing—the latter generally are categorized as “incidents” rather than as accidents and do not appear in the National Transportation Safety Board data from which the database in the Handbook is drawn.

Limits on usage intensity—the number of people per acre—must take into account both types of potential aircraft accidents. To the extent that accidents and incidents are of the controlled variety, then allowing high concentrations of people in a small area would be sensible, as long as intervening areas are little populated. However, concentrated populations present a greater risk for severe consequences in the event of an uncontrolled accident at that location. The policies in Chapter 2 address both of these circumstances. Limiting the average usage intensity over a site reduces the risks associated with either type of accident. In most types of land use development, though, people are not spread equally throughout the site. To minimize the risks from an uncontrolled accident, the policies also limit the extent to which people can be concentrated and development can be clustered in any small area.

**Open Land Requirements**

Creation of requirements for open land near an airport addresses the objective of enhancing safety for the occupants of an aircraft forced to make an emergency landing away from a runway. If sufficiently large and clear of obstacles, open land areas can be valuable for light aircraft anywhere near an airport. For large and high-performance aircraft, however, open land has little value for emergency landing purposes and is useful primarily where it is an extension of the clear areas immediately adjoining a runway.

**Highly Risk-Sensitive Uses**

Certain critical types of land uses—particularly schools, hospitals, and other uses in which the mobility of occupants is effectively limited—should be avoided near the ends of runways regardless of the number of people involved. Critical community infrastructure also should be avoided near airports. These types of facilities include power plants, electrical substations, public communications facilities and other facilities, the damage or destruction of which could cause significant adverse effects to public health and welfare well beyond the immediate vicinity of the facility. Lastly, aboveground storage of large quantities of highly flammable or hazardous materials may pose high risks if involved in an aircraft accident and therefore are generally incompatible close to runway ends.
Basis for Setting Criteria

As with noise contours, risk data by itself does not answer the question of what degree of land use restrictions should be established in response to the risks. Although most ALUCs have policies that restrict certain land use activities in locations beyond the runway protection zones, the size of the area in which restrictions are established and the specific restrictions applied vary from one county to another.

Data useful in defining the geographic extent of airport safety areas was discussed above. To set safety compatibility criteria applicable within these zones presents the fundamental question of what is safe. Expressed in another way: what is an acceptable risk? In one respect, it may seem ideal to reduce risks to a minimum by prohibiting most types of land use development from areas near airports. However, as addressed in the Handbook, there are usually costs associated with such high degrees of restrictiveness. In practice, safety criteria are set on a progressive scale with the greatest restrictions established in locations with the greatest potential for aircraft accidents.

Little established guidance is available to ALUCs regarding how restrictive to make safety criteria for various parts of an airport’s environs. Unlike the case with noise, there are no formal federal or state laws or regulations which set safety criteria for airport area land uses for civilian airports except within runway protection zones (and with regard to airspace obstructions as described separately in the next section). Federal Aviation Administration safety criteria primarily are focused on the runway and its immediate environment. Runway protection zones—then called clear zones—were originally established mostly for the purpose of protecting the occupants of aircraft which overrun or land short of a runway. Now, they are defined by the FAA as intended to enhance the protection of people and property on the ground.

The most useful place from which ALUCs can begin to determine appropriate safety compatibility criteria for airport environs is the Handbook itself. Although not regulatory in nature, state law obligates ALUCs to “be guided by” the information presented in the Handbook. Suggested usage intensity limitations, measured in terms of people per acre, are set forth along with other safety criteria. Reference should be made to that document for detailed description of the suggested criteria. Three risk-related variables discussed in the Handbook are worth noting here, however.

- **Runway Proximity**: In general, the areas of highest risk are closest to the runway ends and secondarily along the extended runway centerline. However, many common aircraft flight tracks do not follow along the runway alignment, particularly on departures. Also, where an aircraft crashes may not be along the flight path that was intended to be followed. As indicated in Figures D2 and D3, these factors affect the risk distribution.

- **Urban versus Rural Areas**: Irrespective of airports, people living in urban areas face different types of risks than those living in rural areas. The cost of avoiding risks differs between these two settings as well. The Handbook acknowledges these differences by indicating that usage intensities can be higher in heavily developed urban areas compared to partially undeveloped suburban areas or minimally developed rural locations, yet be equivalent in terms of the level of acceptable risk.

- **Existing versus Proposed Uses**: Another distinction in compatibility policies can be drawn between existing and proposed development. It is reasonable for safety-related policies to be established which prohibit certain types of new development while considering identical existing development to be acceptable. The Handbook notes that cost is an important factor in this regard. The range of risks can be divided into three levels. At the bottom of this scale are negligible and acceptable risks for which no action is necessary. At the top are intolerable risks for which action is necessary regardless of the cost. In between are risks that are significant, but tolerable. Whether action
should be taken to reduce these risks depends upon the costs involved. Typically, the cost of removing an incompatible development is greater than the cost of avoiding its construction in the first place.

Preparation of this Compatibility Plan has been greatly guided by the Handbook information. The Handbook, though, also recognizes the importance of tailoring compatibility plans to local circumstances. Such has been the case with the safety compatibility criteria included in this Compatibility Plan.

AIRSPACE PROTECTION

Relatively few aircraft accidents are caused by land use conditions that are hazards to flight. The potential exists, however, and protecting against it is essential to airport land use safety compatibility. In addition, and importantly, land use conditions that are hazards to flight may impact the continued viability of airport operations and limit the ability of an airport to operate in the manner identified by the airport proprietor in an adopted airport master plan and airport layout plan.

Compatibility Objective

Because airspace protection is in effect a safety factor, its objective can likewise be thought of in terms of risk. Specifically, the objective is to avoid development of land use conditions that, by posing hazards to flight, can increase the risk of an accident occurring. The particular hazards of concern are:

› Airspace obstructions;
› Wildlife hazards, particularly bird strikes; and
› Land use characteristics that pose other potential hazards to flight by creating visual or electronic interference with air navigation.

The purpose of the airspace protection policies is to ensure that structures and other uses do not cause hazards to aircraft in flight in the airport vicinity. Hazards to flight include physical obstructions to the navigable airspace, wildlife hazards, particularly bird strikes and land use characteristics that create visual or electronic interference with aircraft navigation or communication. This purpose is accomplished by policies that place limits on the height of structures and other objects in the airport vicinity and restrictions on other uses that potentially pose hazards to flight.

Measurement

The measurement of requirements for airspace protection around an airport is a function of several variables including: the dimensions and layout of the runway system; the type of operating procedures established for the airport; and, indirectly, the performance capabilities of aircraft operated at the airport.

› Airspace Obstructions: Whether a particular object constitutes an airspace obstruction depends upon two factors: the height of the object relative to the runway elevation; and its proximity to the airport. The acceptable height of objects near an airport is most commonly determined by application of standards set forth in Federal Aviation Regulations (FAR) Part 77, Safe, Efficient Use, and Preservation of the Navigable Airspace. These regulations establish a three-dimensional space in the air above an airport. Any object which penetrates this volume of airspace is considered to be an “obstruction” and may affect the aeronautical use of the airspace. Additionally, as described below, another set of airspace protection surfaces is defined by the U.S. Standard for Terminal Instrument
Procedures, known as TERPS. Although the intended function of these standards is in design of instrument approach and departure procedures, they can be important in land use compatibility planning in situations where ground elevations near an airport exceed the FAR Part 77 criteria.

- **Wildlife and Other Hazards to Flight**: The significance of other potential hazards to flight is principally measured in terms of the hazards’ specific characteristics and their distance from the airport and/or its normal traffic patterns.

### Compatibility Strategies

Compatibility strategies for the protection of airport airspace are relatively simple and are directly associated with the individual types of hazards:

- **Airspace Obstructions**: Buildings, antennas, other types of structures, and trees should be limited in height so as not to pose a potential hazard to flight.

- **Wildlife and Other Hazards to Flight**: Land uses that may create other types of hazards to flight near an airport should be avoided or modified so as not to include the offending characteristic.

### Basis for Setting Criteria

The criteria for determining airspace obstructions have been long-established in FAR Part 77. Also, state of California regulation of obstructions under the State Aeronautics Act (Public Utilities Code, Section 21659) is based on FAR Part 77 criteria. A shortcoming of FAR Part 77 criteria, however, is that they often are too generic to fit the conditions specific to individual airports. The airspace protection surfaces defined in these regulations can be either more or less restrictive than appropriate for a particular airport. The surfaces can be less restrictive than essential in instances where an instrument approach procedure or its missed approach segment are not aligned with the runway. FAR Part 77 also does not take into account instrument departure procedures which, at some airports, can have critical airspace requirements. Oppositely, FAR Part 77 provides no useful guidance as to acceptable heights of objects located where the ground level already penetrates the airspace surfaces.

To define airspace protection surfaces better suited to these situations, reference must be made the TERPS standards mentioned above. These standards are used for creation of instrument approach and departure procedures. Thus they exactly match the procedures in effect at an individual airport. Unlike the FAR Part 77 surfaces, the elevations of which are set relative to the runway end elevations irrespective of surrounding terrain and obstacles, the TERPS surface elevations are directly determined by the location and elevation of critical obstacles. By design, neither the ground nor any obstacles can penetrate a TERPS surface. However, construction of a tall object that penetrates a TERPS surface can dictate immediate modifications to the location and elevation of the surfaces and directly cause minimum flight visibility and altitudes to be raised or the instrument course to be realigned. In severe instances, obstructions can force a procedure to be cancelled altogether. A significant downside to use of TERPS surfaces for compatibility planning purposes is that they are highly complex compared to the relative simplicity of FAR Part 77 surfaces. Also, the configuration and/or elevations of TERPS surfaces can change not only in response to new obstacles, but as implementation of new navigational technologies permits additional or modified instrument procedures to be established at an airport.

In the Compatibility Policy Map: Airspace Protection Zones presented in Chapter 3 of this Compatibility Plan, primary reliance is placed upon FAR Part 77 criteria. Where an instrument approach procedure is established, the associated TERPS surfaces are depicted as well. In most locations, the TERPS surfaces are well above the underlying terrain and present no significant constraint on land use development. As
a precaution to help ensure that tall towers or antennas located on high terrain do not penetrate a TERPS surface, places where the ground elevation comes within 100 feet of a TERPS surface are shown on the map.

Among other hazards to flight, bird strikes no doubt represent the most widespread concern. The FAA recommends that uses known to attract birds—sanitary landfills being a primary example—be kept at least 10,000 feet away from any runway used by turbine-powered aircraft. More information regarding criteria for avoidance of uses that can attract wildlife to airports can be found in FAA Advisory Circulars 150/5200-34A, Construction or Establishment of Landfills near Public Airports, and 150/5300-33B, Hazardous Wildlife Attractants On or Near Airports.

Other flight hazards include land uses that may cause visual or electronic hazards to aircraft in flight or taking off or landing at the airport. Specific characteristics to be avoided include sources of glare or bright lights, distracting lights that could be mistaken for airport lights, sources of dust, steam, or smoke that may impair pilot visibility, and sources of electrical interference with aircraft communications or navigation.

INTRODUCTION

The underlying safety compatibility criterion employed in this Compatibility Plan is “usage intensity”—the maximum number of people per acre that can be present in a given area at any one time. If a proposed use exceeds the maximum intensity, it is considered incompatible and thus inconsistent with compatibility planning policies. The usage intensity concept is identified in the California Airport Land Use Planning Handbook as the measure best suited for assessment of land use safety compatibility with airports. The Handbook is published by the California Division of Aeronautics and is required under state law to be used as a guide in preparation of airport land use compatibility plans.

It is recognized, though, that “people per acre” is not a common measure in other facets of land use planning. This Compatibility Plan therefore also utilizes the more common measure of floor area ratio (FAR) as a means of implementing the usage intensity criteria on the local level. This appendix both provides guidance on how the usage intensity determination can be made and defines the relationships between this measure, FAR, and other measures found in land use planning. For a discussion of the rationale for use of people per acre as a measure of risk exposure, see Appendix D.

COUNTING PEOPLE

The most difficult part about calculating a use’s intensity is estimating the number of people expected to use a particular facility under normal circumstances. All people—not just employees, but also customers and visitors—who may be on the property at a single point in time, whether indoors or outside, must be counted. The only exceptions are for rare special events, such as an air show at an airport, for which a facility is not designed and normally not used and for which extra safety precautions can be taken as appropriate.

Ideally, the actual number of people for which the facility is designed would be known. For example, the number of seats in a proposed movie theater can be determined with high accuracy once the theater size is decided. Other buildings, though, may be built as a shell and the eventual number of occupants not known until a specific tenant is found. Furthermore, even then, the number of occupants can change in the future as tenants change. Even greater uncertainty is involved with relatively open uses not having fixed seating—retail stores or sports parks, for example.

Absent clearly measurable occupancy numbers, other sources must be relied upon to estimate the number of people in a proposed development.

Survey of Similar Uses

A survey of similar uses already in existence is one option. Gathering data in this manner can be time-consuming and costly, however. Also, unless the survey sample is sufficiently large and conducted at
various times, inconsistent numbers may result. Except for uncommon uses for which occupancy levels cannot be estimated through other means, surveys are most appropriate as supplemental information.

**Maximum Occupancy**

A second option for estimating the number of people who will be on a site is to rely upon data indicating the maximum occupancy of a building measured in terms of Occupancy Load Factor—the number of square feet per occupant. The number of people on the site, assuming limited outdoor or peripheral uses, can be calculated by dividing the total floor area of a proposed use by the Occupancy Load Factor. The challenge of this methodology lies in establishing realistic figures for square feet per occupant. The number varies greatly from one use to another and, for some uses, has changed over time as well.

A commonly used source of maximum occupancy data is the standards set in the California Building Code (CBC). The chart reproduced as Table E1 indicates the Occupancy Load Factors for various types of uses. The CBC, though, is intended primarily for purposes of structural design and fire safety and represents a legal maximum occupancy in most jurisdictions. A CBC-based methodology consequently results in occupancy numbers that are higher than normal maximum usage in most instances. The numbers also are based upon usable floor area and do not take into account corridors, stairs, building equipment rooms, and other functions that are part of a building’s gross square footage. Surveys of actual Occupancy Load Factors conducted by various agencies have indicated that many retail and office uses are generally occupied at no more than 50% of their maximum occupancy levels, even at the busiest times of day. Therefore, the *Handbook* indicates that the number of people calculated for office and retail uses can usually be divided in half to reflect the actual occupancy levels before making the final people-per-acre determination. Even with this adjustment, the CBC-based methodology typically produces intensities at the high end of the likely range.

Another source of data on square footage per occupant comes from the facility management industry. The data is used to help businesses determine how much building space they need to build or lease and thus tends to be more generous than the CBC standards. The numbers vary not only by the type of facility, as with the CBC, but also by type of industry. The following are selected examples of square footage per employee gathered from a variety of sources.

- Call centers: 150 – 175
- Typical offices: 180 – 250
- Law, finance, real estate offices: 300 – 325
- Research & development, light industry: 300 – 500
- Health services: 500

The numbers above do not take into account the customers who may also be present for certain uses. For retail business, dining establishments, theaters, and other uses where customers outnumber employees, either direct measures of occupancy—the number of seats, for example—or other methodologies must be used to estimate the potential number of people on the site.

**Parking Space Requirements**

For many jurisdictions and a wide variety of uses, the number of people present on a site can be calculated based upon the number of automobile parking spaces that are required. Certain limitations and assumptions must be considered when applying this methodology, however. An obvious limitation is that parking space requirements can be correlated with occupancy numbers only where nearly all users ar-
rive by private vehicle rather than by public transportation, walking, or other method. Secondly, the jurisdiction needs to have a well-defined parking ordinance that lists parking space requirements for a wide range of land uses. For most uses, these requirements are typically stated in terms of the number of parking spaces that must be provided per 1,000 square feet of gross building size or a similar ratio. Lastly, assumptions must be made with regard to the average number of people who will arrive in each car.

Both of the critical ratios associated with this methodology—parking spaces to building size and occupants to vehicles—vary from one jurisdiction to another even for the same types of uses. Research of local ordinances and other sources, though, indicates that the following ratios are typical.

- **Parking Space Ratios**—These examples of required parking space requirements are typical of those found in ordinances adopted by urban and suburban jurisdictions. The numbers are ratios of spaces required per 1,000 square feet of gross floor area. Gross floor area is normally measured to the outside surfaces of a building and includes all floor levels as well as stairways, elevators, storage, and mechanical rooms.
  - Small Restaurants 10.0
  - Medical Offices 4.0 – 5.7
  - Shopping Centers 4.0 – 5.0
  - Health Clubs 3.3 – 5.0
  - Business Professional Offices 3.3 – 4.0
  - Retail Stores 3.0 – 3.5
  - Research & Development 2.5 – 4.0
  - Manufacturing 2.0 – 2.5
  - Furniture, Building Supply Stores 0.7 – 1.0

- **Vehicle Occupancy**—Data indicating the average number of people occupying each vehicle parking at a particular business or other land use can be found in various transportation surveys. The numbers vary both from one community or region to another and over time, thus current local data is best if available. The following data represent typical vehicle occupancy for different trip purposes.
  - Work 1.05 – 1.2
  - Education 1.2 – 2.0
  - Medical 1.5 – 1.7
  - Shopping 1.5 – 1.8
  - Dining, Social, Recreational 1.7 – 2.3
APPENDIX E
METHODS FOR DETERMINING CONCENTRATIONS OF PEOPLE

Usage Intensity Relationship to Other Development Measures

Calculating Usage Intensities

Once the number of people expected in a particular development—both over the entire site and within individual buildings—has been estimated, the usage intensity can be calculated. The criteria in Chapter 3 of this Compatibility Plan are measured in terms of the average intensity over the entire project site.

The average intensity is calculated by dividing the total number of people on the site by the site size. A 10-acre site expected to be occupied by as many as 1,000 people at a time, thus would have an average intensity of 100 people per acre. The site size equals the total size of the parcel or parcels to be developed.

Having calculated the usage intensities of a proposed development, a comparison can be made with the criteria set forth in the Compatibility Plan to determine whether the proposal is consistent or inconsistent with the policies.

Comparison with Floor Area Ratio

As noted earlier, usage intensity or people per acre is not a common metric in land use planning. Floor area ratio or FAR—the gross square footage of the buildings on a site divided by the site size—is a more common measure in land use planning. Some counties and cities adopt explicit FAR limits in their zoning ordinance or other policies. Those that do not set FAR limits often have other requirements such as, a maximum number of floors a building can have, minimum setback distances from the property line, and minimum number of parking spaces. These requirements effectively limit the floor area ratio as well.

To facilitate local jurisdiction implementation, the Safety Compatibility Criteria table in Chapter 3 has been structured around FAR measures to determine usage intensity limits for many types of nonresidential land use development. To utilize FAR in this manner, a critical additional piece of information is necessary to overcome the major shortcoming of FAR as a safety compatibility measure. The problem with FAR is that it does not directly correlate with risks to people because different types of buildings with the same FAR can have vastly different numbers of people inside—a low-intensity warehouse versus a high-intensity restaurant, for example. For FAR to be applied as a factor in setting development limitations, assumptions must be made as to how much space each person (employees and others) in the building will occupy. The Safety Compatibility Criteria table therefore indicates the assumed Occupancy Load Factor for various land uses. Mathematically, the relationship between usage intensity and FAR is:

\[
FAR = \frac{(\text{allowable usage intensity}) \times (\text{Occupancy Load Factor})}{43,560}
\]

where \text{usage intensity} is measured in terms of people per acre and \text{Occupancy Load Factor} as square feet per person.

Selection of the usage intensity, occupancy level, and FAR numbers that appear in the Safety Compatibility Criteria table was done in an iterative manner that considered each of the components both separately and together. Usage intensities were initially set with respect to guidelines provided in the California Airport Land Use Planning Handbook (see Appendix D of this Compatibility Plan). Occupancy levels were derived from the CBC, but were adjusted based upon additional research from both local and na-
tional sources in the manner discussed earlier in this appendix. The FAR limits were initially calculated from these other two numbers using the formula above.

**Comparison with Parking Space Requirements**

As discussed above, many jurisdictions have adopted parking space requirements that vary from one land use type to another. Factoring in an estimated vehicle occupancy rate for various land uses as described earlier, the Occupancy Load Factor can be calculated. For example, a typical parking space requirement for office uses is 4.0 spaces per 1,000 square feet or 1 space per 250 square feet. If each vehicle is assumed to be occupied by 1.1 persons, the equivalent Occupancy Load Factor would be 1 person per 227 square feet. This number falls squarely within the range noted above that was found through separate research of norms used by the facility management industry.

As an added note, the Occupancy Load Factor of 215 square feet per person indicated in the Safety Compatibility Criteria table for office uses is slightly more conservative than the above calculation produces. This means that, for a given usage intensity standard, the FAR limit in the table is slightly more restrictive than would result from a higher Occupancy Load Factor.

**Occupant Load Factors**

California Building Code
INTRODUCTION

Over a 21-year period from 1990 to 2011, a total of 1,952 wildlife strikes were reported at Sacramento International Airport (SMF), 70 of which resulted in substantial damage to aircraft. In 2008, the number of reported wildlife strikes at SMF was the highest for any airport in the Federal Aviation Administration’s (FAA’s) Western-Pacific region. At that time, SMF ranked sixth nationwide in the number of wildlife strikes reported, and second in the number of strikes causing significant damage to aircraft. Based on the number of recorded bird strikes at SMF, the FAA has determined that the risk posed by hazardous wildlife at SMF is serious. Consequently, the County of Sacramento (County) has undertaken numerous initiatives to mitigate wildlife hazards on and near the airport. However, the County’s authority to reduce wildlife hazards in neighboring jurisdictions is limited.

As such, the purpose of this paper is to identify the role that the Sacramento Area Council of Governments (SACOG), acting in its capacity as the Airport Land Use Commission (ALUC) for Sacramento, Sutter, Yolo and Yuba Counties, can have in preventing wildlife hazards near SMF. The need for establishing a defined role for the ALUC is based on the following premises:

- Collisions between aircraft and wildlife compromise the safety of the flying and non-flying public.
- Sacramento County’s authority to reduce wildlife hazards are limited to the lands it owns or that are within its land use jurisdiction.
- The ALUC’s principal function is to protect public health and safety by ensuring the adoption of land use measures that minimize the public’s exposure to excessive noise and safety hazards within areas around SMF. Proposed land use plans and projects that could create new wildlife hazards are within the purview of the ALUC to address. The ALUC, however, has no jurisdiction over existing land uses.
- The ALUC can indirectly reduce wildlife hazards around SMF by establishing land use measures applicable to all local agencies within the SMF airport influence area, with the exception of Placer County which is not within SACOG’s ALUC jurisdiction.

The information provided herein is intended to serve as a starting point for discussions with the Technical Advisory Committee (TAC) about the appropriate role of the ALUC in preventing wildlife hazards around SMF. The objective is to obtain TAC input on wildlife hazard policies to be included in the Airport Land Use Compatibility Plan (ALUCP) for SMF and to define the geographic area within which these policies would apply.

WILDLIFE HAZARDS AT SMF

The Sacramento County Airport System (SCAS), the department of the County that operates SMF, receives grant-in-aid assistance from the FAA to facilitate capital improvement projects at SMF. As such,
SCAS has had to demonstrate to the FAA that SMF is properly and adequately equipped and programs are in place to provide a safe airport-operating environment. To do so, SCAS has had to address wildlife hazard issues through the preparation of a Wildlife Hazard Assessment (WHA) study and a Wildlife Hazard Management Plan (WHMP). SCAS has also had to take immediate action, when possible, to alleviate wildlife hazards whenever they are detected, such as establishing procedures for employees and tenants to reduce and report wildlife hazards. Specific responsibilities of airport operators are described in FAR Part 139.337 and FAA AC 150/5200-33B, *Hazardous Wildlife Attractants On or Near Airports*.

To address a recurring pattern of wildlife strikes, the first WHMP for SMF was prepared in 1996. The current WHMP was approved by the FAA in 2009. In March 2012, the FAA approved a new WHA and indicated that a new WHMP will be required for SMF based on the findings of the 2012 WHA study. Completion of the new WHMP is imminent. Pertinent information from the 2012 WHA study is summarized below.

### Hazardous Wildlife Species

Since 1990, more than 88 species have been identified in the FAA’s wildlife strike records for SMF. The WHA study revealed that the top six species or group species posing the highest risk to aviation safety for aircraft operating at or in the vicinity of SMF are:

**Blackbird/Starlings:** The blackbird guild\(^1\) is the most abundant species observed around SMF. This group of birds uses the mowed grass on the airfield and surrounding lands, the water features on and near the airport, and the trees and structures on the airport for foraging, roosting, and loafing. These species tend to fly in large flocks that pose a threat to aviation due to the potential for multiple strikes and multiple engine ingestions.

**Rock Doves/Mourning Doves:** Rock doves (also known as rock pigeons) and mourning doves combine to make the second most abundant guild of birds observed at SMF. These birds forage and loaf in large flocks in the mowed and disked airfield areas. High numbers of these birds are found on the jet bridges and terminal rooftop during roosting periods. These birds also use areas close to aircraft ground operations areas and cross the airfield in large groups that could coincide with aircraft takeoff and landing operations.

**Waterfowl:** The majority of the waterfowl\(^2\) observed on or near the airport utilize open water features and nearby off-site agricultural areas. Large flocks of migratory waterfowl have been reported at higher altitudes. Waterfowl were determined to create a potentially high risk to aircraft based on their large size, abundance, presence at high altitudes, and the availability of open water features on and near the airport that provide habitat.

**White-faced Ibis:** These birds tend to travel in flocks and utilize areas on and off the airport for foraging. Airport staff has placed a high priority on managing the White-faced ibis population due to their abundance and tendency to cross the flight path of both runways when foraging on nearby agricultural fields.

---

\(^1\) The blackbird guild includes the European starlings, blackbirds, Brewer’s blackbirds and red-winged blackbirds.

\(^2\) Waterfowl species include ducks, geese, and swans such as the mallard duck, Canada goose, cinnamon teal, common goldeneye, American widgeon, and American green-winged teal.
Hawks: Hawk species have been observed foraging over the mowed portions of airport property (both airside and landside areas). The species typically maintain a diet of invertebrates, small to medium-sized mammals, birds and reptiles. Red-tail hawk species are year-round residents throughout California. The Swainson's hawks migrate annually between breeding areas in North America and in the pampas of South America. This species can be observed in the Sacramento Valley region from February through August.

Coyotes: Coyotes are the largest mammal observed in the WHA. FAA ranks coyotes as a serious threat to aircraft based on their size. The SCAS and the United States Department of Agriculture (USDA) staffs remove coyotes when they are observed on the airport.

Wildlife Attractants at SMF

Several land uses have been identified near SMF that have the potential to attract hazardous wildlife. These include surrounding agricultural areas, stormwater and drainage areas, landscaped areas, active construction areas, and open water.

Agriculture: Most of the area within 5-miles of SMF is used and zoned for agricultural uses and is not controlled by the SCAS. These uses include many different types of crops such as rice (which uses flooding of fields as a standard practice), safflower, hay/alfalfa, orchards, and nut trees. The crops create habitat which provides food and shelter for numerous species that have the potential to pose risks to aviation. Water features, such as agricultural ditches, stormwater conveyances and flood control channels, also provide open water habitat.

An example of these uses near SMF is the Conaway Ranch, which lies to the west of the Sacramento River and to the east of Davis and Woodland. The Ranch is comprised of over 17,000 acres that are used for agricultural production and waterfowl/wildlife habitat. A large portion of the Ranch is within five miles of SMF. The Conaway Preservation Group, LLC (CPG) implements “programs to attract and maintain wildlife resources while continuing an extensive farming operation, including rice, alfalfa, tomatoes, corn, safflower, melons, and other crops.”

Sacramento River Corridor: The Sacramento River is west and south of the airport. The river curves to the east just north and south of the airport, placing the corridor under aircraft arrival and departure routes. The river corridor attracts many species of wildlife and serves as a migratory corridor for several avian species. The proximity of the river corridor and its location within the flight path increases the risk of wildlife strikes for low-flying aircraft.

Undeveloped Industrial Area: The 1,800-acre area east of the airport known as Metro Air Park is zoned for industrial use. A portion of the site is being used for agricultural activities, while the balance remains undeveloped. Stormwater retention basins within Metro Air Park are also wildlife attractants.

Pacific Flyway: SMF is located within the Pacific Flyway, an ecological corridor through which millions of migratory birds (more than 350 species) pass each year during seasonal migrations. Migrating birds pose risks to aircraft because they may enter flight paths at higher altitudes, and because large flocks of migrating birds (waterfowl, raptors, and shore birds) use airport property and surrounding agricultural areas for feeding and resting during migration.

---

3 Hawk species include red-tailed and red-shouldered hawks, Swainson’s hawks, northern harriers, and Cooper’s hawks.
Synergistic Factors: When considering the effects of wildlife attractants near an airport, it is not just the individual attractants, but their interrelationships that is important to recognize. Birds, as well as many land animals, do not remain in one location, but travel from place to place for nesting, foraging, and hunting. When these paths cross an airport or its flight paths, the potential for striking aircraft is increased.

Reducing Wildlife Hazards Near Airports

FAA Guidance

Animals are attracted to areas that reflect their natural habitat and provide basic needs, such as food, water, and shelter. As stated in FAA Advisory Circular 150/5200-33B, Hazardous Wildlife Attractants On or Near Airports, “When considering proposed land uses, airport operators, local planners, and developers must take into account whether the proposed land uses, including new development projects, will increase wildlife hazards. Land use practices that attract or sustain hazardous wildlife populations on or near airports can significantly increase the potential for wildlife strikes.”

To reduce the risk of wildlife strikes, the FAA recommends the minimum separation criteria outlined below for land use practices that attract hazardous wildlife to the vicinity of airports. The FAA guidance also states that hazardous wildlife attractants should be avoided, eliminated or mitigated within these separation distances. These separation criteria apply to land uses that cause movement of hazardous wildlife onto, into, or across an airport’s approach or departure airspace or air operations area (AOA).

For airports such as SMF, the FAA recommends the following minimum separation standards:

- 10,000-feet between the AOA and the nearest hazardous wildlife attractant if the airport supports turbine-powered (jet) aircraft; and
- 5-statute miles between the AOA and hazardous wildlife attractants if the attractant could cause hazardous wildlife movement into or across approach, departure, or circling airspace. The purpose of this criterion is to protect the approach, departure and circling airspace.

The FAA-approved 2012 WHA for SMF delineates these airport/wildlife separation boundaries for the airport. A copy of the map is provided in Exhibit 1. Other FAA guidance pertaining to the management of wildlife hazards is summarized in Table 1 at the end of this paper.

---

4 In FAA hazardous wildlife terminology, “mitigation” should be interpreted as alleviating or reducing the hazardous wildlife attractant.
5 A Part 139 air carrier airport, an airport subject to federal grant assurances and an airport serving turbine-powered (jet) aircraft.
Exhibit 1
SMF 5-Mile and 10,000-Foot Separation Criteria
Land Use Controls

The risk of wildlife strikes can be reduced by understanding and controlling possible habitats on or near an airport. First, it must be understood that both constructed and natural areas can provide wildlife with ideal locations for feeding, loafing, reproduction, and escape. Therefore, management practices can be as diverse as:

- Changing a proposed land use to one that would be less attractive to hazardous wildlife
- Changing certain features of a proposed land use to make it less desirable to hazardous wildlife
- Harassment techniques to control hazardous wildlife populations (not typically employed for areas off-airport).

The discussion in this paper focuses on the first two of these techniques. They are the ones that an airport may not be able to implement, but compatibility policies of an airport land use commission could address.

Replace proposed land use with one that does not attract hazardous wildlife

The following land uses may attract hazardous wildlife (not an all-inclusive list): 6

- Municipal solid waste landfills, open water sanitary sewer systems, underwater discharge of solid waste, odor-causing rotting organic matter (putrescible waste) disposal operations and/or composting operations, trash transfer stations, recycling centers
- Wastewater treatment plants, wastewater discharge and sludge disposal facilities
- Wetlands, artificial marshes
- Aboveground stormwater management facilities: canal or water conveyance structures, marsh areas, retention ponds, poorly drained locations
- Surface mining, dredge spoil containment areas
- Aquaculture, commercial fishing, shellfish harvesting
- Agriculture, particularly cereal grains, rice and fruit-producing trees
- Confined livestock feeding operations
- Golf courses, recreational facilities, landscaping
- Preserves or habitat mitigation lands

Design the project to minimize attractiveness to hazardous wildlife

Habitat modification is an effort to create an environment around an airport that is unattractive to potentially hazardous animals. 7 Habitat modification techniques include, but are not limited to:

- Minimizing vegetation growth
- Cutting grass high or low to detract birds feeding (varies by bird species) and using grass types that are not preferred by birds or their prey
- Replacing natural grass areas with artificial turf, if practicable

---

Reducing amount of open water by avoiding use of or filling in ponds and other water sources, if practicable
- Controlling earthworms and rodents
- Fencing with perching deterrents and which is designed to prevent animals from digging under the fence
- Landfill control techniques
- For aboveground stormwater facilities, measures could include steep-slope, rip-rapped lined stormwater detention areas, vegetation control of emergent plants in canals, conveyance systems, dry detention areas, and side slopes of detention areas
- Basic control strategies, such as repelling and exclusion techniques
- Designing buildings and structures to prevent perching and roosting
- Avoiding/minimizing landscaping with tree and dense shrub clusters, fruit-bearing plants and grasses and forbs that produce seed

**AGENCIES INVOLVED IN WILDLIFE MANAGEMENT**

**Federal Aviation Administration (FAA)**

The mission of the FAA is to provide a safe, secure and efficient aviation system. In accordance with Title 14 of the Code of Federal Regulations Part 139.337, the FAA is responsible for addressing wildlife hazards and their associated human health and safety concerns. The FAA provides guidance to airport operators on how to address wildlife hazard issues and reviews WHA studies and WHMPs, as well as development plans of airports to ensure that wildlife hazards are minimized.

The FAA also recommends that all airport operators, to the extent practicable, oppose off-airport land-use changes or practices within certain areas of the airport environs that may attract hazardous wildlife. Failure to do so may lead to noncompliance with applicable grant assurances. Grant Assurance No. 21 refers specifically to Land Use, stating that airport operators “will take appropriate action, to the extent reasonable, including the adoption of zoning laws, to restrict the use of land adjacent to or in the immediate vicinity of the airport to activities and purposes compatible with normal airport operations, including landing and takeoff of aircraft” (FAA 2012).

**Sacramento County**

**Sacramento County Airport System**

As indicated previously, SCAS implements a comprehensive WHMP to reduce the threat of aircraft and wildlife interactions. Implementation of the WHMP is managed by the Planning and Environment Section and implemented by a team of highly qualified biologists. The WHMP for SMF identifies the attractants that pose a hazard to aircraft operations and the measures utilized to alleviate or eliminate wildlife hazards. The Plan also provides a designation of responsible parties, priorities for habitat modification and/or land use changes, and requirements for applicable local, state, and federal permits.

---

8 SMF is a Part 139 certificated airport.
Planning Division

Sacramento County understands that SMF and the other County airports form a critical component of a transportation system that moves people and goods into and out of the region. It reflects this understanding in its 2030 General Plan by incorporating pertinent policies in its safety, land use, traffic and circulation, and economic development elements. The County’s General Plan contains policies to support the goals and objectives as articulated by the Sacramento County Department of Transportation and the Sacramento County Airport System. In describing the relationship between airports and land use planning, the General Plan includes the following goal:

Ensure the continual vitality and long-term viability of airports in Sacramento County to serve current and future air transportation demand through careful and appropriate land use planning around airports, consistent with Federal Aviation Administration (FAA) regulations and grant-in-aid obligations, adopted airport master plans, and Airport Land Use Compatibility Plans.

The intent of this General Plan goal is to address FAA regulations and guidance related to hazardous wildlife attractants and the siting and design of proposed new land uses and projects that may be located in the vicinity of airports within Sacramento County. The General Plan includes the following land use policy which specifically addresses hazardous wildlife attractants proposed within FAA airport/wildlife separation criteria:

Because land use decisions around airports by local governments have a direct impact on an airport’s long-term viability and utility, proposed new land use projects and land use practices near airports within Sacramento County shall consider consistency with current federal, State, and local airport land use compatibility regulations, orders, policies, plans, standards and guidance pertaining to public safety and minimization of hazardous wildlife attractants within five statute miles of County airports. (General Plan Policy LU-87)

The Planning Division is currently working on the Natomas Joint Vision and Northwest Master Plan, which is “a collaborative process between the City of Sacramento and Sacramento County to consider a plan for development and habitat preservation in the unincorporated northwest portion of the County.” The Natomas Joint Vision Master Plan Area encompasses SMF extending from the Sacramento River on the west to the Urban Services Boundary on the east. SCAS staff has been involved in the Natomas Joint Vision Master Plan to ensure hazardous wildlife issues are considered in the planning process.

Other Entities

Table 2 at the end of this paper summarizes the role and responsibilities of other entities directly or indirectly involved in managing wildlife hazards.

Airport Land Use Commission

Role and Limitations

The discussion below focuses on the role and limitations of the ALUC in addressing wildlife hazards around SMF. As previously indicated, the County of Sacramento includes comprehensive policies in its

---

2030 General Plan to address wildlife hazards around SMF. These policies, however, apply only to the unincorporated areas of Sacramento County.

Given the airport’s location amidst agricultural lands, wildlife habitat preserves, and natural resources, some of which are in neighboring Yolo and Sutter Counties, the question remains: What role can/should the ALUC play in influencing these agencies to mitigate wildlife hazards around SMF?

ALUC Land Use Authority. As expressed by ALUC law, the role of the ALUC is to protect public health and safety by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public’s exposure to excessive noise and safety hazards within areas around public airports. In fulfilling this role, ALUCs have the statutory authority to prepare and adopt ALUCPs for each public-use and military airport within its jurisdiction. These plans establish restrictions on future land uses to ensure their compatibility with airport operations. Although implementation and enforcement of these land use restrictions are not within an ALUC’s purview, state law requires local government agencies (counties and cities) to amend their respective general plans and specific plans as necessary to keep them consistent with the ALUCP (and therefore their implementing standards). If the ALUC determines a local plan or development proposal is inconsistent with the ALUCP, the local agency must either reconsider its plan or overrule the ALUC’s decision.

Given this consistency requirement, the ALUC can indirectly set controls on new land use development to prevent wildlife hazards for the jurisdictions of Sacramento, Sutter, Yolo, and Yuba Counties.

Existing Uses/Natural Areas. In accordance with ALUC law, ALUCs have no jurisdiction over existing land uses, nor do their policies affect existing uses. However, limitation on ALUC authority over existing land uses applies only to the extent that the use remains constant. Merely because a land use exists on a property does not entitle the owner to expand the use, convert it to a different use, or otherwise redevelop the property if new or increased incompatibility would result.

A variety of existing land uses around SMF (farmland and natural areas) have the potential to attract hazardous wildlife and thus pose a threat to aircraft operations. Although the ALUC cannot force an existing use to be discontinued, wildlife policies adopted by the ALUC would apply if there is a change in land use that would require discretionary approval on the part of the county or city.

Flood Control Plans/Development Mitigation. Responsibility for flood protection is distributed among many agencies at various levels of government. At the federal level the three primary agencies are the Army Corps of Engineers, Federal Emergency Management Agency (FEMA), and the Bureau of Reclamation. At the state level, the primary agencies are the Department of Water Resources and the Central Valley Flood Protection Board. The state agencies completed a Central Valley Flood Protection Plan in June of 2012. The Plan establishes flood protection requirements for local land-use decisions. Upon adoption, counties and cities in the Sacramento-San Joaquin Valley will be required to amend their general plans and zoning ordinances to be consistent with the Central Valley Flood Protection Plan. At the local level, counties and cities are mandated to address flood-related matters in the land use, conservation, safety and housing elements of their general plans. Together, federal, state and local agencies are responsible for developing plans to finance, develop and construct flood control project improvements.

---

10 California State Aeronautics Act Public Utilities Code Section 21670 et seq.
11 Government Code Section 65302.3(a)
In lieu of providing extensive flood protection (e.g., levees), some flood control plans set aside a certain amount of cropland that is less sensitive to flooding to minimize overall flood risks. However, if this approach is applied within the vicinity of the airport, the seasonal bodies of open water could attract hazardous wildlife. Some flood control projects also propose new or enhancement of existing habitat for threatened or endangered wildlife as a means of mitigating the impacts of certain flood control projects (e.g., building new levees). For example, in southern Sutter County and northern Sacramento County, levee improvements in the Natomas basin will impact more than 1,600 acres of farmland and convert up to 700 acres of farmland to habitat required for mitigation.\(^\text{12}\)

In terms of reviewing federal and state flood protection plans and projects, the ALUC’s role is limited because of its lack of authority over federal and state agencies. However, the ALUC can provide comments during the public review period like any other agency. Also, as a professional courtesy, local agencies that are aware of these types of projects could alert the ALUC so that it might submit comments to the appropriate authorities. At the local level, the ALUC has statutory authority to review local agency plans and, under certain circumstances, land use projects proposed by a private party (e.g., PG&E, land owner).

**Habitat Conservation Plans/Development Mitigation.** In this paper, habitat is synonymous with natural resources including wetlands, rare and endangered species, riparian corridors, woodlands, fish, floodplains, streams, rivers, vegetation, plants and other wildlife.

Several Habitat Conservation Plans (HCP) and Natural Community Conservation Programs (NCCP) are under way in the region, including the Yolo County HCP/NCCP, Bay Delta Conservation Plan (BDCP)\(^\text{13}\), Natomas Basin HCP (adopted), Yuba-Sutter HCP/NCCP, South Sacramento HCP and Placer County NCCP. These plans help protect lands that are valuable for habitat, agriculture, environmental services (e.g., water purification), and recreation. HCPs also provide clarity on where development is envisioned, what resource impacts need to be mitigated, and where that mitigation should occur.

Many HCPs and local general plans include development mitigation requirements for impacted habitat land. In the Sacramento region, the focus of most development mitigation is to provide or enhance habitat for threatened and endangered species. For example, some HCPs and development projects include proposals to promote alfalfa and other crops as they provide good foraging habitat for the Swainson’s Hawk. A number of agencies require either direct dedication of land or payment of in-lieu fees. The fees go into an account for the purchase of agricultural land for habitat mitigation.

The role of the ALUC in reviewing local conservation plans and projects is similar to that described above for flood control plans.

**General Plans and Specific Plans.** One type of land use planning over which the ALUC clearly has review authority is county and city general plans and specific plans. In reviewing these documents, as well as associated zoning ordinances, the ALUC can look for measures that the local jurisdictions will require developers to take to minimize wildlife attractants near SMF. Also, the ALUC

\(^{13}\) At the time of this Working Paper, an Environmental Impact Report/Environmental Impact Statement for the BDCP was being prepared and was near release. Options under the Plan include floodplain restoration with inundation of suitable floodplain habitat to increase fish-rearing habitat and food base production as well as the restoration of riparian habitat designed to establish native vegetation near channels, streams, and rivers. All of these measures have the potential to increase hazardous wildlife in the SMF aircraft operating environs.
can examine the broad-scale development patterns proposed for near the airport to see where potential new wildlife attractants will be located. An important consideration will be whether any new attractants would create bird flight paths or other animal routes that would cross the airport or associated approach and departure flight corridors.

➤ **Agriculture.** Agricultural areas are considered wildlife hazard attractants due to the presence of livestock and/or an available food source for wildlife. The FAA generally discourages all agricultural crops and open water on airport land and in the critical area of the airport (within a 10,000-foot radius of the AOA for airports that support turbine-powered aircraft and a 5,000-foot radius for airports that support propeller-powered aircraft).

Local agencies do not typically regulate agricultural activities. As such, farmers can change the type of crops grown without need of a discretionary permit, provided they have sufficient water rights to support the crops. Although the ALUC has no authority over existing agricultural uses, agricultural-related projects requiring local permit approval could be reviewed by the ALUC to ensure that new wildlife hazards are not created or enhanced. Ultimately, the only way a local jurisdiction can ensure that crops incompatible with aviation are not grown near airports is to obtain land use control through fee title or easement acquisition of farmland or execution of long-term leases.

➤ **Expertise.** Although ideal, the Handbook recognizes that it may be infeasible for some ALUCs to adopt the airport/wildlife separation areas recommended by the FAA, particularly the 5-mile boundary. The Handbook goes on to say, however, that ALUCs should consider reviewing land uses, development plans and conservation plans proposed within an airport influence area on a case-by-case basis to determine their potential for attracting hazardous wildlife.

➤ In terms of SMF, SCAS has a comprehensive WHMP to reduce the threat of aircraft and wildlife interactions on the airport. Additionally, SCAS staff includes FAA-qualified wildlife biologists who monitor wildlife activity on and near the airport. SCAS also monitors proposed changes in the use of nearby parcels for development and comments on all known land use projects that have the potential to increase the attraction of hazardous wildlife at SMF and the other airports operated or managed by the Sacramento County Airport System (including Mather, Executive, Franklin and McClellan airports).

➤ ALUC compatibility plans usually include few policies addressing wildlife hazards. However, the documented activity and extensive hazardous wildlife management program at SMF warrants the addition of a thorough discussion on and policies specific to hazardous wildlife in the SMF ALUCP. Because of the many facets relative to hazardous wildlife management, the ALUC could seek expert opinion from SCAS, FAA, other wildlife agencies or a consultant regarding a project’s potential for increasing wildlife hazards. For complex or controversial projects, an independent evaluation would likely be needed. If an ALUC adopts wildlife hazard policies, the ALUC’s review process would bring greater awareness to other local agencies about airport/wildlife hazard issues. An added benefit is that SCAS would be alerted to critical projects proposed within the airport influence area for SMF.

---

14 *California Airport Land Use Planning Handbook (Handbook)*, California Department of Transportation, Division of Aeronautics, October 2011, page 4-36.
ALUC Wildlife Hazard Policies

As described above, the ALUC has a role in establishing policies that would place restrictions on land uses or development activities which would attract hazardous wildlife. A preliminary list of policies or policy topics that could be included in the ALUCP is provided below.

› Utilize the set of FAA-defined airport/wildlife separation areas as one of the factors to consider in establishing the airport influence area for SMF.
› Provide a list of agencies and activities that would be subject to ALUC review.
› Advocate avoidance or mitigation of land uses that attract hazardous wildlife consistent with FAA rules and regulations.
› Provide a list of land uses and development features that may pose the greatest risk within the airport influence area.
› Require proposed projects within the airport influence area to be reviewed by SCAS staff, their designated biologists, or an FAA-qualified wildlife biologist to determine the projects’ potential to attract hazardous wildlife. Planning documents could include local general and specific plans, flood protection plans, habitat conservation plans, and project development mitigation.
› Require other elements of county and city general plans (e.g., addressing flood control and habitat conservation) to reference the FAA-defined airport/wildlife separation areas and/or the ALUCP for policies related to wildlife hazards.
› Require project proponents to identify any features during or following construction that could increase attraction of birds or other wildlife hazardous to aircraft operations on or near the airport. This would work if the ALUCP identified proposed land uses or features that may pose the greatest risk as suggested above.
› Require project proponents to obtain comments from the FAA or SCAS on the potential for wildlife hazards from the project. If the project has the potential to create a wildlife attractant or increase the risk of a wildlife strike, the letter should identify whether measures are available to avoid minimize the wildlife attractant (i.e., modify landscaping, stormwater management strategies, etc.).

Additional ALUC Role

Beyond the policies established in the ALUCP, the role of the ALUC could be expanded to include the items listed below. The primary constraint to these efforts would be staff time, limited budgets and lack of expertise.

› Educate landowners and farmers by posting information or website links of relevant agencies and organizations on the ALUC website.
› Facilitate coordination among agencies. For example, the ALUC could meet with local regulatory agencies during the review process to indicate that there are constraints in developing near SMF. The ALUC and local regulatory agencies could work together to identify strategies that would be acceptable for involved parties.
› Provide sample “Best Management Practices” for new land uses or projects that would address wildlife hazards around SMF. The BMPs could include general design guidance and applicable tenant policies for such items as keeping trash receptacles covered, prohibit the feeding of animals within the airport influence area, etc.
One means by which the ALUC—or perhaps more broadly, SACOG—could fulfill these roles would be for it to establish, in conjunction with SCAS as the airport operator, a working group on wildlife hazards to aviation activities at Sacramento International Airport. In this capacity, SACOG would be functioning in a manner consistent with its fundamental role as a coordinator and facilitator among government agencies rather than as a source of specific expertise.

The working group should include representatives of all groups having an interest in wildlife hazard matters, including, but not limited to: SCAS, county and city planning departments, Federal Aviation Administration, Caltrans Division of Aeronautics, federal and state agencies having authority over wetlands and flood control, major land owners, farming interests, and development and building interests.

The primary function of the group should be to: establish of lines of communication and coordination among the membership; exchange information regarding wildlife hazards; develop strategies for collectively addressing wildlife hazards issues affecting the airport environs; and disseminate “Best Management Practices” and other pertinent information to the wider audiences that the members represent.

</table>

### Memorandum of Agreement

Through this MOA, the agencies establish procedures necessary to coordinate their missions to more effectively address existing and future environmental conditions contributing to aircraft-wildlife strikes throughout the U.S. These efforts are intended to minimize wildlife risks to aviation and human safety, while protecting the Nation’s valuable environmental resources.
### Table 2. Entities Involved in Managing Wildlife Activities

<table>
<thead>
<tr>
<th>Agency</th>
<th>Role and Responsibility</th>
</tr>
</thead>
</table>
| **U.S Department of Agriculture, Wildlife Services (USDA/WS)** | * Responsible for resolving conflicts that occur when human activity and wildlife are in proximity to one another.  
  * Tasked with managing wildlife to reduce damage to agriculture, natural resources and property, and minimize potential threats to human health and safety.  
  * Assists federal, state, and local agencies; airport managers; the aviation industry; and military in reducing wildlife hazards on and in the vicinity of airports.  
  * When there is a wildlife hazard issue, USDA/WS personnel are responsible for notifying the appropriate aviation authorities. For example, the USDA/WS recommends the issuance of a depredation permit for an airport to the U.S. Fish and Wildlife Services. |
| **U.S. Army Corps of Engineers** | * Protects navigation and water resources and prevents obstruction or alteration of navigable waters without a COE permit.  
  * Issues permits for wetland habitat modification or excavation. Projects requiring permits might require mitigation for impacted resources. |
| **U.S. Environmental Protection Agency** | * Sets and enforces environmental standards and regulations related to air and water pollution, hazardous wastes, pesticides, and toxic substances.  
  * Responsible for siting and construction of wastewater treatment and solid waste disposal facilities, which are permitted through state and local agencies.  
  * Works with the FAA on wetland projects, and also approves or disapproves landfill sites and use of pesticides. |
| **U.S. Department of Interior, U.S. Fish and Wildlife Service** | * Conserves, protect, and enhance the nation’s fish and wildlife and their habitats.  
  * Responsible for the conservation and enhancement of migratory birds, threatened and endangered species, certain marine mammals, anadromous fishes, and wetlands.  
  * Grants federal permits to airports to lethally remove migratory birds.  
  * Renders biological opinions on proposed federal activities that might impact federally listed or proposed endangered or threatened species or result in the destruction or adverse modification of designated or proposed critical habitat. |
| **State Wildlife Management Agencies** | * Protect resident non-migratory birds, terrestrial mammals, freshwater fish, reptiles, and other plant species.  
  * List certain wildlife and plant species as threatened or endangered that aren’t considered as such at the federal level.  
  * Set migratory game-bird hunting seasons and bag limits within the guidelines of USFWS.  
  * Issue depredation permits. |
| **State Environmental Protection Agencies** | * Inspect landfills to ensure compliance with all applicable federal and state regulations.  
  * Establish pesticide applicator licensing requirements and applicator training procedures. |
| **Air Traffic Control Tower** | * Reports unsafe conditions, including hazardous wildlife on or near the AOA, to the appropriate airport personnel as they are observed.  
  * When feasible, personnel will also issue advisory information on pilot-reported, tower-reported, or radar-observed and pilot-verified bird activity. |

| SACOG                | * As the ALUC, identify policies for preventing the creation of new wildlife hazards within the Airport Influence Area (AIA).  
  * Evaluate projects submitted for ALUC review for their potential to create wildlife attractants or cause wildlife to pass through AIA. |
| Jurisdictions within the AIA | * Alert project applicants to applicable ALUC policies regarding wildlife hazard management  
  * Review proposed projects in the AIA for their potential to create new wildlife hazards. |
| SCAS                 | * Coordinate with FAA to prevent the development of wildlife hazards on or near the airport and receive funding for ongoing wildlife management practices.  
  * Review proposed airport development projects, as well as non-airport developments within five miles, for their potential to attract potentially hazardous wildlife during planning, design and construction.  
  * Educate jurisdictions and neighbors within the AIA about wildlife hazards and their prevention.  
  * Develop educational materials and policies for leaseholders and tenants regarding wildlife hazards and their prevention. |
This checklist is intended to assist local agencies with modifications necessary to make their local plans and other local policies consistent with the ALUCP. It is also designed to facilitate ALUC reviews of these local plans and policies. The list will need to be modified to reflect the policies of each individual ALUC and is not intended as a state requirement.

COMPATIBILITY CRITERIA

General Plan Document

The following items typically appear directly in a general plan document. Amendment of the general plan will be required if there are any conflicts with the ALUCP.

- **Land Use Map**—No direct conflicts should exist between proposed new land uses indicated on a general plan land use map and the ALUC land use compatibility criteria.
  - Residential densities (dwelling units per acre) should not exceed the set limits.
  - Proposed nonresidential development needs to be assessed with respect to applicable intensity limits (see below).
  - No new land uses of a type listed as specifically prohibited should be shown within affected areas.

- **Noise Element**—General plan noise elements typically include criteria indicating the maximum noise exposure for which residential development is normally acceptable. This limit must be made consistent with the equivalent ALUCP criteria. Note, however, that a general plan may establish a different limit with respect to aviation-related noise than for noise from other sources (this may be appropriate in that aviation-related noise is sometimes judged to be more objectionable than other types of equally loud noises).

Zoning or Other Policy Documents

The following items need to be reflected either in the general plan or in a separate policy document such as a combining zone ordinance. If a separate policy document is adopted, modification of the general plan to achieve consistency with the ALUCP may not be required. Modifications would normally be needed only to eliminate any conflicting language which may be present and to make reference to the separate policy document.

- **Intensity Limitations on Nonresidential Uses**—ALUCPs may establish limits on the usage intensities of commercial, industrial, and other nonresidential land uses. This can be done by duplication of the performance-oriented criteria—specifically, the number of people per acre—indicated in the ALUCP. Alternatively, ALUCs may create a detailed list of land uses which are allowable and/or not allowable within each compatibility zone. For certain land uses, such a list may need to include limits on building sizes, floor area ratios, habitable floors, and/or other design parameters which are equivalent to the usage intensity criteria.

- **Identification of Prohibited Uses**—ALUCPs may prohibit schools, day care centers, assisted living centers, hospitals, and other uses within a majority of an airport’s influence area. The facilities often are permitted or conditionally permitted uses within many commercial or industrial land use designations.

- **Open Land Requirements**—ALUCP requirements, if any, for assuring that a minimum amount of open land is preserved in the airport vicinity must be reflected in local policies. Normally, the locations which are intended to be maintained as open land would be identified on a map with the total acreage within each compatibility zone indicated. If some of the area included as open land is private property, then policies must be established which assure that the open land will continue to exist as the property develops. Policies specifying the required characteristics of eligible open land should also be established.

- **Infill Development**—If an ALUCP contains infill policies and a jurisdiction wishes to take advantage of them, the lands that meet the qualifications must be shown on a map.
Zoning or Other Policy Documents, Continued

- **Height Limitations and Other Hazards to Flight**—To protect the airport airspace, limitations must be set on the height of structures and other objects near airports. These limitations are to be based upon FAR Part 77. Restrictions also must be established on other land use characteristics which can cause hazards to flight (specifically, visual or electronic interference with navigation and uses which attract birds). Note that many jurisdictions have already adopted an airport-related hazard and height limit zoning ordinance which, if up to date, will satisfy this consistency requirement.

- **Buyer Awareness Measures**—Besides disclosure rules already required by state law, as a condition for approval of development within certain compatibility zones, some ALUCPs require either dedication of an avigation easement to the airport proprietor or placement on deeds of a notice regarding airport impacts. If so, local agency policies must contain similar requirements.

- **Nonconforming Uses and Reconstruction**—Local agency policies regarding nonconforming uses and reconstruction must be equivalent to or more restrictive than those in the ALUCP, if any.

---

**REVIEW PROCEDURES**

In addition to incorporation of ALUC compatibility criteria, local agency implementing documents must specify the manner in which development proposals will be reviewed for consistency with the compatibility criteria.

- **Actions Always Required to be Submitted for ALUC Review**—PUC Section 21676 identifies the types of actions that must be submitted for airport land use commission review. Local policies should either list these actions or, at a minimum, note the local agency’s intent to comply with the state statute.

- **Other Land Use Actions Potentially Subject to ALUC Review**—In addition to the above actions, ALUCPs may identify certain major land use actions for which referral to the ALUC is dependent upon agreement between the local agency and ALUC. If the local agency fully complies with all of the items in this general plan consistency check list or has taken the necessary steps to overrule the ALUC, then referral of the additional actions is voluntary. On the other hand, a local agency may elect not to incorporate all of the necessary compatibility criteria and review procedures into its own policies. In this case, referral of major land use actions to the ALUC is mandatory. Local policies should indicate the local agency’s intentions in this regard.

- **Process for Compatibility Reviews by Local Jurisdictions**—If a local agency chooses to submit only the mandatory actions for ALUC review, then it must establish a policy indicating the procedures which will be used to assure that airport compatibility criteria are addressed during review of other projects. Possibilities include: a standard review procedure checklist which includes reference to compatibility criteria; use of a geographic information system to identify all parcels within the airport influence area; etc.

- **Variance Procedures**—Local procedures for granting of variances to the zoning ordinance must make certain that any such variances do not result in a conflict with the compatibility criteria. Any variance that involves issues of noise, safety, airspace protection, or overflight compatibility as addressed in the ALUCP must be referred to the ALUC for review.

- **Enforcement**—Policies must be established to assure compliance with compatibility criteria during the lifetime of the development. Enforcement procedures are especially necessary with regard to limitations on usage intensities and the heights of trees. An airport combining district zoning ordinance is one means of implementing enforcement requirements.

---

*Source: California Airport Land Use Planning Handbook (October 2011)*
The responsibility for implementation of the compatibility criteria set forth in the *Sacramento International Airport Land Use Compatibility Plan* rests largely with the Sacramento Area Council of Governments (SACOG), acting in its capacity as the Airport Land Use Commission (ALUC) for the counties of Sacramento, Sutter, Yolo, and Yuba. As described in Appendix G, modification of general plans and specific plans for consistency with applicable compatibility plans is the major step in this process. However, not all of the measures necessary for achievement of airport land use compatibility are necessarily included in general plans and specific plans. Other types of documents also serve to implement the *Compatibility Plan* policies. Samples of such implementation documents are included in this appendix.

### Airport Combining Zone Ordinance

As noted in Chapter 1 of this document, one option that the affected local jurisdictions can utilize to implement airport land use compatibility criteria and associated policies is adoption of an airport combining zone ordinance. An airport combining zone ordinance is a way of collecting various airport-related development conditions into one local policy document. Adoption of a combining zone is not required, but is suggested as an option. Table H1 describes some of the potential components of an airport combining zone ordinance.

### Buyer Awareness Measures

Buyer awareness is an umbrella category for several types of implementation documents all of which have the objective of ensuring that prospective buyers of airport area property, particularly residential property, are informed about the airport’s impact on the property. The *Sacramento International Airport Land Use Compatibility Plan* policies include each of these measures.

- **Avigation Easement**—Avigation easements transfer certain property rights from the owner of the underlying property to the owner of an airport or, in the case of military airports, to a local government agency on behalf of the federal government (the U.S. Department of Defense is not authorized to accept avigation easements). This *Compatibility Plan* requires avigation easement dedication as a condition for approval of development on property subject to high noise levels or a need to restrict heights of structures and trees to less than might ordinarily occur on the property. Specific easement dedication requirements are set forth in Chapter 2. Also, airports may require avigation easements in conjunction with programs for noise insulation of existing structures in the airport vicinity. A sample of a standard avigation easement is included in Table H2.

- **Recorded Overflight Notification**—An overflight notification informs property owners that the property is subject to aircraft overflight and generation of noise and other impacts. No restrictions on the heights of objects, requirements for marking or lighting of objects, or access to the property for these purposes are included. An overflight notification serves only as buyer acceptance of overflight conditions. Suggested wording of an overflight notification is included in Table H3. Unlike an avigation easement, overflight easement, or other type of easement, an overflight notification is not
a conveyance of property rights. However, like an easement, an overflight notification is recorded on the property deed and therefore remains in effect with sale of the property to subsequent owners. Overflight notifications are generally appropriate in areas outside the 60 dB CNEL noise contour, outside Safety Zones, and within areas where the height of structures and other objects would not pose a significant potential of being airspace obstruction hazards.

Airport Proximity Disclosure—A less definitive, but more all-encompassing, form of buyer awareness measure is for the ALUC and local jurisdictions to establish a policy indicating that information about and airport’s influence area should be disclosed to prospective buyers of all airport-vicinity properties prior to transfer of title. The advantage of this type of program is that it applies to previously existing land uses as well as to new development. The requirement for disclosure of information about the proximity of an airport has been present in state law for some time, but legislation adopted in 2002 and effective in January 2004 explicitly ties the requirement to the airport influence areas established by airport land use commissions (see Appendix B for excerpts from sections of the Business and Professions Code and Civil Code that define these requirements). With certain exceptions, these statutes require disclosure of a property’s location within an airport influence area under any of the following three circumstances: (1) sale or lease of subdivided lands; (2) sale of common interest developments; and (3) sale of residential real property. In each case, the disclosure statement to be used is defined by state law as follows:

NOTICE OF AIRPORT IN VICINITY

This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors). Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you.
An airport compatibility combining zoning ordinance might include some or all of the following components:

- **Airspace Protection**—A combining district can establish restrictions on the height of buildings, antennas, trees, and other objects as necessary to protect the airspace needed for operation of the airport. These restrictions should be based upon the current version of FAR Part 77, Objects Affecting Navigable Airspace. Subpart C. Additions or adjustment to take into account TERPS surfaces should be made as necessary. Provisions prohibiting smoke, glare, bird attractions, and other hazards to flight should also be included.

- **FAA Notification Requirements**—Combining districts also can be used to ensure that project developers are informed about the need for compliance with the notification requirements of FAR Part 77. Subpart B of the regulations requires that the proponent of any project which exceeds a specified set of height criteria submit a Notice of Proposed Construction or Alteration (Form 7460-1) to the Federal Aviation Administration prior to commencement of construction. The height criteria associated with this notification requirement are lower than those spelled out in FAR Part 77, Subpart C, which define airspace obstructions. The purpose of the notification is to determine if the proposed construction would constitute a potential hazard or obstruction to flight. Notification is not required for proposed structures that would be shielded by existing structures or by natural terrain of equal or greater height, where it is obvious that the proposed would not adversely affect air safety.

- **State Regulation of Obstructions**—State law prohibits anyone from constructing or altering a structure or permitting an object of natural growth to exceed the heights established by FAR Part 77, Subpart C, unless the FAA has determined the object would not or does not constitute a hazard to air navigation (FAC Section 21658 and 21659).

- **Designation of High Noise-Impact Areas**—California state statutes require that multi-family residential structures in high-noise exposure areas be constructed so as to limit the interior noise to a Community Noise Equivalent Level of no more than 45 dB. A combining district could be used to indicate the locations where special construction techniques may be necessary in order to ensure compliance with this requirement. The combining district also could extend this criterion to single-family dwellings.

- **Maximum Densities/Intensities**—Airport noise and safety compatibility criteria are frequently expressed in terms of dwelling units per acre for residential uses and people per acre for other land uses. While general plans typically use these measures of maximum density/intensity for land uses, zoning ordinances generally use minimum lot sizes and setbacks, along with building height restrictions.

These standards often supplement, but do not translate directly into general plan density/intensity standards. Incorporation of airport area-related density/intensity standards measured in the same manner as a General Plan can either be directly included in a combining zone or used to modify the underlying land use designations. For residential land uses, the correlation between the compatibility criteria and land use designations is direct. For other land uses, the method of calculating the intensity limitations needs to be defined. Alternatively, a matrix can be established indicating whether each specific type of land use is compatible with each compatibility zone. To be useful, the land use categories need to be more detailed than typically provided by general plan or zoning ordinance land use designations.

- **Open Areas for Emergency Landing of Aircraft**—In most circumstances in which an accident involving a small aircraft occurs near an airport, the aircraft is under control as it descends. When forced to make an off-airport emergency landing, pilots will usually attempt to do so in the most open area readily available. To enhance safety both for people on the ground and the occupants of aircraft, ALUCPs often contain criteria requiring a certain amount of open land near airports. These criteria are most effectively carried out by planning at the general or specific plan level, but may also need to be included in a combining district so that they will be applied to development of large parcels. Adequate open areas can often be provided by clustering of development on adjacent land.

- **Areas of Special Compatibility Concern**—A significant drawback of standard general plan and zoning ordinance land use designations is that they can be changed. Uses that are currently compatible are not assured of staying that way in the future. Designation of areas of special compatibility concern would serve as a reminder that airport impacts should be carefully considered in any decision to change the existing land use designation. [A legal consideration that supports the value of this concept is that down-zoning of a property to a less intensive use is becoming more difficult. It is much better not to have improperly up-zoned the property in the first place.]

- **Real Estate Disclosure Policies**—The geographic extent and specific language of recommended real estate disclosure statements can be described in an airport combining zone ordinance (Business and Professions Code Section 11010(a) and (b)(13) and Civil Code, Sections 1102.8, 1103.4, and 1353.

#### Sample Airport Combining Zone Components

Sacramento International Airport Land Use Compatibility Plan (Adopted December 12, 2013)
TYPICAL AVIGATION EASEMENT
Sacramento International Airport

This indenture made this _____ day of ____________, 20__, between _________________________ hereinafter referred to as Grantor, and the County of Sacramento, a political subdivision in the State of California, hereinafter referred to as Grantee.

The Grantor, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, does hereby grant to the Grantee, its successors and assigns, a perpetual and assignable easement over the following described parcel of land in which the Grantor holds a fee simple estate. The property which is subject to this easement is depicted as _____________________ on “Exhibit A” attached and is more particularly described as follows:

[Insert legal description of real property]

The easement applies to the Airspace above an imaginary plane over the real property. The plane is described as follows:

The imaginary plane above the hereinbefore described real property, as such plane is defined by Part 77 of the Federal Aviation Regulations, and consists of a plane [describe approach, transition, or horizontal surface]; the elevation of said plane being based upon the Sacramento International Airport official airport elevation of 27 feet Above Mean Sea Level (AMSL), as determined by the Airport Layout Plan, the approximate dimensions of which said plane are described and shown on Exhibit A attached hereto and incorporated herein by reference.

The aforesaid easement and right-of-way includes, but is not limited to:

(1) For the use and benefit of the public, the easement and continuing right to fly, or cause or permit the flight by any and all persons, or any aircraft, of any and all kinds now or hereafter known, in, through, across, or about any portion of the Airspace hereinabove described; and

(2) The easement and right to cause or create, or permit or allow to be caused and created within all space above the existing surface of the hereinabove described real property and any and all Airspace laterally adjacent to said real property, such noise, vibration, currents and other effects of air illumination and fuel consumption as may be inherent in, or may arise or occur from or during the operation of aircraft of any and all kinds, now or hereafter known or used, for navigation of or flight in air; and

(3) A continuing right to clear and keep clear from the Airspace any portions of buildings, structures or improvements of any kinds, and of trees or other objects, including the right to remove or demolish those portions of such buildings, structures, improvements, trees, or other things which extend into or above said Airspace, and the right to cut to the ground level and remove, any trees which extend into or above the Airspace; and

(4) The right to mark and light, or cause or require to be marked and lighted, as obstructions to air navigation, any and all buildings, structures or other improvements, and trees or other objects, which extend into or above the Airspace; and

(5) The right of ingress to, passage within, and egress from the hereinabove described real property, for the purposes described in subparagraphs (3) and (4) above at reasonable times and after reasonable notice.

Table H2

Typical Avigation Easement
For and on behalf of itself, its successors and assigns, the Grantor hereby covenants with the County of Sacramento, for the direct benefit of the real property constituting the Sacramento International Airport hereinafter described, that neither the Grantor, nor its successors in interest or assigns will construct, install, erect, place or grow, in or upon the hereinafore described real property, nor will they permit or allow any building structure, improvement, tree, or other object to extend into or above the Airspace so as to constitute an obstruction to air navigation or to obstruct or interfere with the use of the easement and rights-of-way herein granted. If Grantor fails to comply with the foregoing obligations within ten (10) days after Grantee gives written notice of violation to Grantor by depositing said notice in the United States mail, Grantee may enter the above-described real property for the purposes described in subparagraphs (3) and/or (4), above, and charge Grantor for the cost thereof.

The easements and rights-of-way herein granted shall be deemed both appurtenant to and for the direct benefit of that real property which constitutes the Sacramento International Airport, in the County of Sacramento, State of California; and shall further be deemed in gross, being conveyed to the Grantee for the benefit of the Grantee and any and all members of the general public who may use said easement or right-of-way, in landing at, taking off from or operating such aircraft in or about the Sacramento International Airport, or in otherwise flying through said Airspace.

Grantor, together with its successors in interest and assigns, hereby waives its right to legal action against Grantee, its successors or assigns for monetary damages or other redress due to impacts, as described in paragraph (2) of the granted rights of easement, associated with aircraft operations in the air or on the ground at the airport, including future increases in the volume or changes in location of said operations. Furthermore, Grantee, its successors, and assigns shall have no duty to avoid or mitigate such damages through physical modification of airport facilities or establishment or modification of aircraft operational procedures or restrictions. However, this waiver shall not apply if the airport role or character of its usage (as identified in an adopted airport master plan, for example) changes in a fundamental manner which could not reasonably have been anticipated at the time of the granting of this easement and which results in a substantial increase in the in the impacts associated with aircraft operations. Also, this grant of easement shall not operate to deprive the Grantor, its successors or assigns of any rights which may from time to time have against any air carrier or private operator for negligent or unlawful operation of aircraft.

These covenants and agreements run with the land and are binding upon the heirs, administrators, executors, successors and assigns of the Grantor, and, for the purpose of this instrument, the real property firstly hereinafore described is the servient tenement and said Sacramento International Airport is the dominant tenement.

DATED:

STATE OF } 

COUNTY OF } ss

On _____________________, before me, the undersigned, a Notary Public in and for said County and State personally appeared ____________________, and ________________ known to me to be the persons whose names are subscribed to the within instrument and acknowledged that they executed the same.

WITNESS my hand and official seal.

__________________________________________________

Notary Public

Source: Modified from California Airport Land Use Planning Handbook (January 2002)
RECORDED OVERFLIGHT NOTIFICATION

This Overflight Notification concerns the real property situated in the County of Sacramento and [insert if applicable] the City of ______________________, State of California, described as ______________________[APN No.: ].

This Overflight Notification provides notification of the condition of the above described property in recognition of, and in compliance with, CALIFORNIA BUSINESS & PROFESSIONS CODE Section 11010 and CALIFORNIA CIVIL CODE Sections 1102.6, 1103.4 and 1353, effective January 1, 2004, and related state and local regulations and consistent with policies of the Airport Land Use Commission for Sacramento, Sutter, Yolo, and Yuba Counties for overflight notification provided in the Sacramento International Airport Land Use Compatibility Plan.

NOTICE OF AIRPORT IN VICINITY: This property is located in the vicinity of an airport and within the airport influence area. The property may be subject to some of the annoyances or inconveniences associated with proximity to an airport and aircraft operations (for example: noise, vibration, overflights or odors). Individual sensitivities to those annoyances can vary from person to person. You should consider what airport annoyances, if any, affect the Property before you complete your purchase and whether they are acceptable to you.

The Federal Aviation Administration (FAA) has regulatory authority over the operation of aircraft in flight and on the runway and taxiway surfaces at Sacramento International Airport. The FAA is, therefore, exclusively responsible for airspace and air traffic management, including ensuring the safe and efficient use of navigable airspace, developing air traffic rules, assigning the use of airspace and controlling air traffic. Please contact the FAA for more detailed information regarding overflight and airspace protection issues associated with the operation of military aircraft.

The airport operator, the County of Sacramento, maintains information regarding hours of operation and other relevant information regarding airport operations. Please contact your local airport operator for more detailed information regarding airport specific operational issues including hours of operation.

This Overflight Notification shall be duly recorded with the Sacramento County Assessor’s Office, shall run with the Property, and shall be binding upon all parties having or acquiring any right, title or interest in the Property.

Effective Date:_______, 20__

Table H3

Sample Recorded Overflight Notification
Above Ground Level (AGL): An elevation datum given in feet above ground level.

Accident Potential Zones (APZs): A set of safety-related zones defined by AICUZ studies for areas beyond the ends of military airport runways. Typically, three types of zones are established: a clear zone closest to the runway end, then APZ I and APZ II. The potential for aircraft accidents and the corresponding need for land use restrictions is greatest with the clear zone and diminish with increased distance from the runway.

Air Carriers: The commercial system of air transportation, consisting of the certificated air carriers, air taxis (including commuters), supplemental air carriers, commercial operators of large aircraft, and air travel clubs.

Air Installation Compatible Use Zones (AICUZ): A land use compatible plan prepared by the U.S. Department of Defense for military airfields. AICUZ plans serve as recommendations to local governments bodies having jurisdiction over land uses surrounding these facilities.

Aircraft Accident: An occurrence incident to flight in which, as a result of the operation of an aircraft, a person (occupant or nonoccupant) receives fatal or serious injury or an aircraft receives substantial damage.

- Except as provided below, substantial damage means damage or structural failure that adversely affects the structural strength, performance, or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component.

- Engine failure, damage limited to an engine, bent fairings or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wingtips are not considered substantial damage.

Aircraft Incident: A mishap associated with the operation of an aircraft in which neither fatal nor serious injuries nor substantial damage to the aircraft occurs.

Aircraft Mishap: The collective term for an aircraft accident or an incident.

Aircraft Operation: The airborne movement of aircraft at an airport or about an en route fix or at other point where counts can be made. There are two types of operations: local and itinerant. An operation is counted for each landing and each departure, such that a touch-and-go flight is counted as two operations. (FAA Stats)

Airport: An area of land or water that is used or intended to be used for the landing and taking off of aircraft, and includes its buildings and facilities if any. (FAR 1)

Airport Elevation: The highest point of an airport’s useable runways, measured in feet above mean sea level. (AIM)
Airport Land Use Commission (ALUC): A commission authorized under the provisions of California Public Utilities Code, Section 21670 et seq. and established (in any county within which a public-use airport is located) for the purpose of promoting compatibility between airports and the land uses surrounding them.

Airport Layout Plan (ALP): A scale drawing of existing and proposed airport facilities, their location on an airport, and the pertinent clearance and dimensional information required to demonstrate conformance with applicable standards.

Airport Master Plan (AMP): A long-range plan for development of an airport, including descriptions of the data and analyses on which the plan is based.

Airport Reference Code (ARC): A coding system used to relate airport design criteria to the operation and physical characteristics of the airplanes intended to operate at an airport. (Airport Design AC)

Airports, Classes of: For the purposes of issuing a Site Approval Permit, The California Department of Transportation, Division of Aeronautics classifies airports into the following categories: (CCR)

- **Agricultural Airport or Heliport:** An airport restricted to use only be agricultural aerial applicator aircraft (FAR Part 137 operators).

- **Emergency Medical Services (EMS) Landing Site:** A site used for the landing and taking off of EMS helicopters that is located at or as near as practical to a medical emergency or at or near a medical facility and
  
  (1) has been designated an EMS landing site by an officer authorized by a public safety agency, as defined in PUC Section 21662.1, using criteria that the public safety agency has determined is reasonable and prudent for the safe operation of EMS helicopters and
  
  (2) is used, over any twelve month period, for no more than an average of six landings per month with a patient or patients on the helicopter, except to allow for adequate medical response to a mass casualty event even if that response causes the site to be used beyond these limits, and
  
  (3) is not marked as a permitted heliport as described in Section 3554 of these regulations and
  
  (4) is used only for emergency medical purposes.

- **Heliport on Offshore Oil Platform:** A heliport located on a structure in the ocean, not connected to the shore by pier, bridge, wharf, dock or breakwater, used in the support of petroleum exploration or production.

- **Personal-Use Airport:** An airport limited to the non-commercial use of an individual owner or family and occasional invited guests.

- **Public-Use Airport:** An airport that is open for aircraft operations to the general public and is listed in the current edition of the Airport/Facility Directory that is published by the National Ocean Service of the U.S. Department of Commerce.

- **Seaplane Landing Site:** An area of water used, or intended for use, for landing and takeoff of seaplanes.

- **Special-Use Airport or Heliport:** An airport not open to the general public, access to which is controlled by the owner in support of commercial activities, public service operations, and/or personal use.
Temporarily Helicopter Landing Site: A site, other than an emergency medical service landing site at or near a medical facility, which is used for landing and taking off of helicopters and

1. is used or intended to be used for less than one year, except for recurrent annual events and

2. is not marked or lighted to be distinguishable as a heliport and

3. is not used exclusively for helicopter operations.

Ambient Noise Level: The level of noise that is all encompassing within a given environment for which a single source cannot be determined. It is usually a composite of sounds from many and varied sources near to and far from the receiver.

Approach Protection Easement: A form of easement that both conveys all of the rights of an avigation easement and sets specified limitations on the type of land uses allowed to be developed on the property.

Approach Speed: The recommended speed contained in aircraft manuals used by pilots when making an approach to landing. This speed will vary for different segments of an approach as well as for aircraft weight and configuration. (AIM)

Aviation-Related Use: Any facility or activity directly associated with the air transportation of persons or cargo or the operation, storage, or maintenance of aircraft at an airport or heliport. Such uses specifically include runways, taxiways, and their associated protected areas defined by the Federal Aviation Administration, together with aircraft aprons, hangars, fixed base operations, terminal buildings, etc.

Avigation Easement: A type of easement that typically conveys the following rights:

- A right-of-way for free and unobstructed passage of aircraft through the airspace over the property at any altitude above a surface specified in the easement (usually set in accordance with FAR Part 77 criteria).

- A right to subject the property to noise, vibrations, fumes, dust, and fuel particle emissions associated with normal airport activity.

- A right to prohibit the erection or growth of any structure, tree, or other object that would enter the acquired airspace.

- A right-of-entry onto the property, with proper advance notice, for the purpose of removing, marking, or lighting any structure or other object that enters the acquired airspace.

- A right to prohibit electrical interference, glare, misleading lights, visual impairments, and other hazards to aircraft flight from being created on the property.

Based Aircraft: Aircraft stationed at an airport on a long-term basis.

California Environmental Quality Act (CEQA): Statutes adopted by the state legislature for the purpose of maintaining a quality environment for the people of the state now and in the future. The Act establishes a process for state and local agency review of projects, as defined in the implementing guidelines that may adversely affect the environment.

Ceiling: Height above the earth’s surface to the lowest layer of clouds or obscuring phenomena. (AIM)
Circling Approach/Circle-to-Land Maneuver: A maneuver initiated by the pilot to align the aircraft with a runway for landing when a straight-in landing from an instrument approach is not possible or not desirable. (AIM)

Clear Zone: The military airport equivalent of runway protection zones at civilian airports.

Combining District: A zoning district that establishes development standards in areas of special concern over and above the standards applicable to basic underlying zoning districts.

Commercial Activities: Airport-related activities that may offer a facility, service or commodity for sale, hire or profit. Examples of commodities for sale are: food, lodging, entertainment, real estate, petroleum products, parts and equipment. Examples of services are: flight training, charter flights, maintenance, aircraft storage, and tiedown. (CCR)

Commercial Operator: A person who, for compensation or hire, engages in the carriage by aircraft in air commerce of persons or property, other than as an air carrier. (FAR 1)

Community Noise Equivalent Level (CNEL): The noise metric adopted by the State of California for evaluating airport noise. It represents the average daytime noise level during a 24-hour day, adjusted to an equivalent level to account for the lower tolerance of people to noise during evening and nighttime periods relative to the daytime period. (State Airport Noise Standards)

Compatibility Plan: As used herein, a plan, usually adopted by an Airport Land Use Commission that sets forth policies for promoting compatibility between airports and the land uses that surround them. Often referred to as a Comprehensive Land Use Plan (CLUP).

Controlled Airspace: Any of several types of airspace within which some or all aircraft may be subject to air traffic control. (FAR 1)

Day-Night Average Sound Level (DNL): The noise metric adopted by the U.S. Environmental Protection Agency for measurement of environmental noise. It represents the average daytime noise level during a 24-hour day, measured in decibels and adjusted to account for the lower tolerance of people to noise during nighttime periods. The mathematical symbol is \( L_{dn} \).

Decibel (dB): A unit measuring the magnitude of a sound, equal to the logarithm of the ratio of the intensity of the sound to the intensity of an arbitrarily chosen standard sound, specifically a sound just barely audible to an unimpaired human ear. For environmental noise from aircraft and other transportation sources, an A-weighted sound level (abbreviated dBA) is normally used. The A-weighting scale adjusts the values of different sound frequencies to approximate the auditory sensitivity of the human ear.

Deed Notice: A formal statement added to the legal description of a deed to a property and on any subdivision map. As used in airport land use planning, a deed notice would state that the property is subject to aircraft overflights. Deed notices are used as a form of buyer notification as a means of ensuring that those who are particularly sensitive to aircraft overflights can avoid moving to the affected areas.

Designated Body: A local government entity, such as a regional planning agency or a county planning commission, chosen by the county board of supervisors and the selection committee of city mayors to act in the capacity of an airport land use commission.

Displaced Threshold: A landing threshold that is located at a point on the runway other than the designated beginning of the runway (see Threshold). (AIM)
**Dwelling Unit:** Any building, structure or portion thereof which is occupied as, or designed or intended for occupancy as, a residence by one or more families, and any vacant land which is offered for sale or lease for the construction or location thereon of any such building, structure, or portion thereof. (HUD)

**Easement:** A less-than-fee-title transfer of real property rights from the property owner to the holder of the easement.

**Equivalent Sound Level (L_{eq}):** The level of constant sound that, in the given situation and time period, has the same average sound energy as does a time-varying sound.

**Federal Aviation Regulations (FAR) Part 77:** The part of Federal Aviation Regulations that deals with objects affecting navigable airspace in the vicinity of airports. Objects that exceed the Part 77 height limits constitute airspace obstructions. FAR Part 77 establishes standards for identifying obstructions to navigable airspace, sets forth requirements for notice to the FAA of certain proposed construction or alteration, and provides for aeronautical studies of obstructions to determine their effect on the safe and efficient use of airspace.

**FAR Part 77 Surfaces:** Imaginary airspace surfaces established with relation to each runway of an airport. There are five types of surfaces: (1) primary; (2) approach; (3) transitional; (4) horizontal; and (5) conical.

**Federal Aviation Administration (FAA):** The U.S. government agency that is responsible for ensuring the safe and efficient use of the nation’s airports and airspace.

**Federal Aviation Regulations (FAR):** Regulations formally issued by the FAA to regulate air commerce.

**Findings:** Legally relevant subconclusions that expose a government agency’s mode of analysis of facts, regulations, and policies, and that bridge the analytical gap between raw data and ultimate decision.

**Fixed Base Operator (FBO):** A business that operates at an airport and provides aircraft services to the general public including, but not limited to, sale of fuel and oil; aircraft sales, rental, maintenance, and repair; parking and tiedown or storage of aircraft; flight training; air taxi/charter operations; and specialty services, such as instrument and avionics maintenance, painting, overhaul, aerial application, aerial photography, aerial hoists, or pipeline patrol.

**General Aviation:** That portion of civil aviation that encompasses all facets of aviation except air carriers. (FAA Stats)

**Glide Slope:** An electronic signal radiated by a component of an ILS to provide vertical guidance for aircraft during approach and landing.

**Global Positioning System (GPS):** A navigational system that utilizes a network of satellites to determine a positional fix almost anywhere on or above the earth. Developed and operated by the U.S. Department of Defense, GPS has been made available to the civilian sector for surface, marine, and aerial navigational use. For aviation purposes, the current form of GPS guidance provides en route aerial navigation and selected types of nonprecision instrument approaches. Eventual application of GPS as the principal system of navigational guidance throughout the world is anticipated.
Helipad: A small, designated area, usually with a prepared surface, on a heliport, airport, landing/takeoff area, apron/ramp, or movement area used for takeoff, landing, or parking of helicopters. (AIM)

Heliport: A facility used for operating, basing, housing, and maintaining helicopters. (HAI)

Infill: Development that takes place on vacant property largely surrounded by existing development, especially development that is similar in character.

Instrument Approach Procedure: A series of predetermined maneuvers for the orderly transfer of an aircraft under instrument flight conditions from the beginning of the initial approach to a landing or to a point from which a landing may be made visually. It is prescribed and approved for a specific airport by competent authority (refer to Nonprecision Approach Procedure and Precision Approach Procedure). (AIM)

Instrument Flight Rules (IFR): Rules governing the procedures for conducting instrument flight. Generally, IFR applies when meteorological conditions with a ceiling below 1,000 feet and visibility less than 3 miles prevail. (AIM)

Instrument Landing System (ILS): A precision instrument approach system that normally consists of the following electronic components and visual aids: (1) Localizer; (2) Glide Slope; (3) Outer Marker; (4) Middle Marker; (5) Approach Lights. (AIM)

Instrument Operation: An aircraft operation in accordance with an IFR flight plan or an operation where IFR separation between aircraft is provided by a terminal control facility. (FAA ATA)

Instrument Runway: A runway equipped with electronic and visual navigation aids for which a precision or nonprecision approach procedure having straight-in landing minimums has been approved. (AIM)

Inverse Condemnation: An action brought by a property owner seeking just compensation for land taken for a public use against a government or private entity having the power of eminent domain. It is a remedy peculiar to the property owner and is exercisable by that party where it appears that the taker of the property does not intend to bring eminent domain proceedings.

Land Use Density: A measure of the concentration of land use development in an area. Mostly the term is used with respect to residential development and refers to the number of dwelling units per acre. Unless otherwise noted, policies in this compatibility plan refer to gross rather than net acreage.

Land Use Intensity: A measure of the concentration of nonresidential land use development in an area. For the purposes of airport land use planning, the term indicates the number of people per acre attracted by the land use. Unless otherwise noted, policies in this compatibility plan refer to gross rather than net acreage.

Large Airplane: An airplane of more than 12,500 pounds maximum certificated takeoff weight. (Airport Design AC)

Localizer (LOC): The component of an ILS that provides course guidance to the runway. (AIM)

Mean Sea Level (MSL): An elevation datum given in feet from mean sea level.

Minimum Descent Altitude (MDA): The lowest altitude, expressed in feet above mean sea level, to which descent is authorized on final approach or during circle-to-land maneuvering in execution of a standard instrument approach procedure where no electronic glide slope is provided. (FAR 1)
Missed Approach: A maneuver conducted by a pilot when an instrument approach cannot be completed to a landing. (AIM)

National Transportation Safety Board (NTSB): The U.S. government agency responsible for investigating transportation accidents and incidents.

Navigational Aid (Navaid): Any visual or electronic device airborne or on the surface that provides point-to-point guidance information or position data to aircraft in flight. (AIM)

Noise Contours: Continuous lines of equal noise level usually drawn around a noise source, such as an airport or highway. The lines are generally drawn in 5-decibel increments so that they resemble elevation contours in topographic maps.

Noise Level Reduction (NLR): A measure used to describe the reduction in sound level from environmental noise sources occurring between the outside and the inside of a structure.

Nonconforming Use: An existing land use that does not conform to subsequently adopted or amended zoning or other land use development standards.

Nonprecision Approach Procedure: A standard instrument approach procedure in which no electronic glide slope is provided. (FAR 1)

Nonprecision Instrument Runway: A runway with an approved or planned straight-in instrument approach procedure that has no existing or planned precision instrument approach procedure. (Airport Design AC)

Obstruction: Any object of natural growth, terrain, or permanent or temporary construction or alteration, including equipment or materials used therein, the height of which exceed the standards established in Subpart C of Federal Aviation Regulations Part 77, Objects Affecting Navigable Airspace.

Overflight: Any distinctly visible and/or audible passage of an aircraft in flight, not necessarily directly overhead.

Overflight Easement: An easement that describes the right to overfly the property above a specified surface and includes the right to subject the property to noise, vibrations, fumes, and emissions. An overflight easement is used primarily as a form of buyer notification.

Overflight Zone: The area(s) where aircraft maneuver to enter or leave the traffic pattern, typically defined by the FAR Part 77 horizontal surface.

Overlay Zone: See Combining District.

Planning Area Boundary: An area surrounding an airport designated by an ALUC for the purpose of airport land use compatibility planning conducted in accordance with provisions of the State Aeronautics Act.

Precision Approach Procedure: A standard instrument approach procedure where an electronic glide slope is provided. (FAR 1)

Precision Instrument Runway: A runway with an existing or planned precision instrument approach procedure. (Airport Design AC)
Referral Area: The area around an airport defined by the planning area boundary adopted by an airport land use commission within which certain land use proposals are to be referred to the commission for review.

Runway Protection Zone (RPZ): An area (formerly called a clear zone) off the end of a runway used to enhance the protection of people and property on the ground. (Airport Design AC)

Safety Zone: For the purpose of airport land use planning, an area near an airport in which land use restrictions are established to protect the safety of the public from potential aircraft accidents.

Secondary Dwelling Unit: An attached or a detached residential dwelling unit which provides complete independent living facilities for one or more persons. It shall include permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as the single-family dwelling is situated. (California Department of Housing and Community Development)

Single-Event Noise: As used in herein, the noise from an individual aircraft operation or overflight.

Single Event Noise Exposure Level (SENEL): A measure, in decibels, of the noise exposure level of a single event, such as an aircraft flyby, measured over the time interval between the initial and final times for which the noise level of the event exceeds a threshold noise level and normalized to a reference duration of one second. SENEL is a noise metric established for use in California by the state Airport Noise Standards and is essentially identical to Sound Exposure Level (SEL).

Site Approval Permit: A written approval issued by the California Department of Transportation authorizing construction of an airport in accordance with approved plans, specifications, and conditions. Both public-use and special-use airports require a site approval permit. (CCR)

Small Airplane: An airplane of 12,500 pounds or less maximum certificated takeoff weight. (Airport Design AC)

Sound Exposure Level (SEL): A time-integrated metric (i.e., continuously summed over a time period) that quantifies the total energy in the A-weighted sound level measured during a transient noise event. The time period for this measurement is generally taken to be that between the moments when the A-weighted sound level is 10 dB below the maximum.

Straight-In Instrument Approach: An instrument approach wherein a final approach is begun without first having executed a procedure turn; it is not necessarily completed with a straight-in landing or made to straight-in landing weather minimums. (AIM)

Structure: Something that is constructed or erected.

Taking: Government appropriation of private land for which compensation must be paid as required by the Fifth Amendment of the U.S. Constitution. It is not essential that there be physical seizure or appropriation for a taking to occur, only that the government action directly interferes with or substantially disturbs the owner’s right to use and enjoyment of the property.

Terminal Instrument Procedures (TERPS): Procedures for instrument approach and departure of aircraft to and from civil and military airports. There are four types of terminal instrument procedures: precision approach, nonprecision approach, circling, and departure.

Threshold: The beginning of that portion of the runway usable for landing (also see Displaced Threshold). (AIM)
**Touch-and-Go:** An operation by an aircraft that lands and departs on a runway without stopping or exiting the runway. (AIM)

**Traffic Pattern:** The traffic flow that is prescribed for aircraft landing at, taxiing on, or taking off from an airport. The components of a typical traffic pattern are upwind leg, crosswind leg, downwind leg, base leg, and final approach. (AIM)

**Visual Approach:** An approach where the pilot must use visual reference to the runway for landing under VFR conditions.

**Visual Flight Rules (VFR):** Rules that govern the procedures for conducting flight under visual conditions. VFR applies when meteorological conditions are equal to or greater than the specified minimum—generally, a 1,000-foot ceiling and 3-mile visibility.

**Visual Runway:** A runway intended solely for the operation of aircraft using visual approach procedures, with no straight-in instrument approach procedure and no instrument designation indicated on an FAA-approved airport layout plan. (Airport Design AC)

**Zoning:** A police power measure, enacted primarily by units of local government, in which the community is divided into districts or zones within which permitted and special uses are established, as are regulations governing lot size, building bulk, placement, and other development standards. Requirements vary from district to district, but they must be uniform within districts. A zoning ordinance consists of two parts: the text and a map.
